PT7 cuts costs

FERRANTI Computer Systems

The year 1931 saw the last of the series of seaplane races, which was won by an RAF team.

DEC brings race back to the waters

by John Kavanagh
A 71-YEAR-OLD seaplane race is being revived this summer by US minicomputer leader Digital Equipment Corp. as part of the British Air Racing Championship.

The Digital Scholarship Trophy Race will commemorate a series of seaplane races held annually from 1913 to 1931, when an RAF team won the trophy for the third time in a row and the series ended. Prize money of almost £15,000 is being put up for the race, which will take place over a 48-mile course over the Solent.

Around 35 competitors are expected, including RAF and Royal Navy teams. The original trophy was put up by the French industrial company Schneider to encourage the development of seaplanes. The first race, like the last, was won by the UK - and followed the Solent course.

Interest in seaplanes has waned because of advances in flying boats and conventional aircraft, and for some years there was only one competitor. Indeed, the UK team won the trophy the third time running and for keeps in 1931 simply by flying over the course with no competition. The Supermarine plane, predecessor of the Spitfire, later in the same day set the World Absolute Air Speed Record, then 519mph.

Public sector bodies join forces

by George Black
SIX major public sector bodies are to form a joint policy on the use of real time software. The six, including the British Steel Corporation, the Central Electricity Generating Board (CEGB), and the Defence Ministry, are to form a public purchasing group. The formation of the group was announced this week by the junior industry minister, John Butcher, who also launched the publication of a suppliers' guide to the best tools currently available. Butcher said: "Companies will need to invest in better tools and methods for the future if development costs are to be reduced. We cannot afford to be complacent about the strong position that UK software currently enjoys."

The software tools for application to large real time systems (STARTS) guide is the fruit of a two-year collaboration between the Department of Trade and Industry, the National Economic Development Office (NEDO) and the National Computing Centre (NCC). The British Steel Corporation, Central Electricity Generating Board, South of Scotland Electricity Board, Civil Aviation Authority and Defence Ministry (MoD) are to adopt the guide as the basis for a UK standard.

They hope to be backed by several private corporations in their bid to harmonise requirements. The buyers will not be involved in writing the guide. They saw it for the first time this week, but there are unlikely to be any shocks in its list of 24 "front runners". They include many established tools such as Mascot and SDS; some new ones like SDI. Perspective are excluded on grounds of immaturity.

McCormack replaces injunction-hit Fast kit

by George Black
McCORMACK and Dodge has obtained a replacement for the Fast report-writer which a US injunction prevented it from selling. If a Washington court agrees, it will supply Software International's "The System" as an interim solution until it can develop a new system of its own.

McCormack's UK distributor, RTZ Computing Services, which is also being sued by the author of the report-writer, ABC Management Systems, said this week that it was fully protected from legal action by its agreement with McCormack. McCormack says it will have its own report-writer on the market by the third quarter of the year for IBM users, and soon after that for ACE users. But users of other hardware may have to wait longer - which is why McCormack is keen to conclude the deal with Software International.

The deal needs the approval of the superior court judge in Washington because McCormack was ordered to pay over \$500,000 to Software International as licensee of Fast. ABC is to receive \$2.3 million in damages from McCormack. "If the judge agrees, the deal between McCormack and Software International will settle all legal claims between the two," says McCormack. McCormack chairman Jim McCormack said it had become clear after long negotiations with ABC that it was no longer in the interests of either to continue the dispute. ABC president Vernon Ralston says McCormack has no right to sell Fast outside the US.

W. H. Smith moves into business software

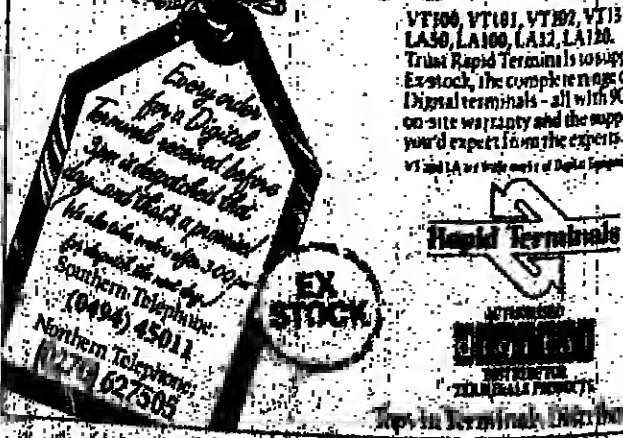

by John Riley
W. H. SMITH is moving into mainstream business software distribution. From the beginning of next month, it will supply software to dealers of selected microcomputers, following a link-up with major US business software distributor Softeam.

Under the W. H. Smith-Softeam scheme, dealers will get business software anywhere in the country within 24 hours, claims W. H. Smith. The software on offer will come from the US-Softeam catalogue of 1,500 products. Smith's present micro business centres around home computers and games, which it has bought from its main source, Radio Shack. It has also been buying software from Apple II, Commodore 64 and IBM model 5.

Smith has separate computer shops in 30 of its largest stores. It is also toying with teledistribution of games software via the Romex re-programmable cartridge system. "Softeam is the biggest business software distributor in the US," says Paul Turner, general manager of W. H. Smith-Softeam. "We look at the software and check it out on each machine, and we give technical support to the dealers. We are targeting certain machines." Among the machines targeted are two that will not be available in the UK until the middle of the year: the IBM PC and the Commodore 386. The latter is a push-button machine with a heavy emphasis on availability of business software for the two micros. "Other Japanese companies made the mistake of launching their micros too quickly, with the wrong operating systems and not enough software," says Roger Handberg, UK sales manager of Fujitsu Microelectronics. "We're doing it the other way round, with two operating systems and stacks of software."

According to Handberg, W. H. Smith-Softeam will have 200 or more packages in Fujitsu format for the middle of March. He has no fear of falling a victim to the microcomputer shakeout and hopes to take 3% of the UK's business software market for 1984. Handberg says that Fujitsu has made £25 million available for the first two years.

Every day at 3 o'clock, we clear the Decks.

REYNOLDS... Hints at acquisitions.

Micro Focus is richer

by Dave Maddon
MICRO Focus, the UK software group and star of the Unlisted Securities Market, has announced spectacular results for the 53 weeks to December 7, 1983. Pre-tax profits nearly tripled to £2.35 million on turnover which more than doubled to £9.1 million.

Not surprisingly, Micro Focus chairman Brian Reynolds is delighted with the performance. He says that the company had made a strong start to its current fiscal year's results. In 1983 77% of the company's revenues were earned overseas, a rise of 10%. But the company lost ground in Europe - sales fell from £602,000 to £155,000 in the period.

Micro Focus is going back to its shareholders for more cash. It hopes to raise £9 million from a right issue. Reynolds suggests that Micro Focus will look for corporate acquisitions in 1984. "We are not actively looking," he says, "but we need to be in a position to take advantage of circumstances should they arise."

Personal Cobol, says Reynolds, will form the basis of a range of workstation oriented products. The 4½-year scheme collapsed when British Telecom dropped out after insisting on a fixed cost contract for work by the Ada Group. Ada is expected to be the de facto standard real time language for the next decade.

SDL managing director, Philip Swinstead, was shocked by the announcement by the other three group members. He says it was premature because talks were still going on between them about the best way forward. "We want a national APSE (Ada Programming Support Environment) project, and believe it can still happen," says Swinstead. "We want to go further than just an ICL compiler. We've been offered a much larger government grant than they have got if we can only agree a plan - but we cannot pick it up because we have not agreed yet."

A statement by the consortium's general manager, Martin Jordan, announces a plan to deliver a portable implementation of Ada for validation by the US Defence Department next March. It says the financial and technical resources would come from ICL, SPL and Software Sciences, along with the DoT grant.

British Telecom is no longer involved, Jordan says he is confident they will also get financial assistance from the Defence Ministry, though this was still not contractually secure. The three companies intend to have 25 design staff on the work, and to replace the half-dozen SDL people involved. Jordan says: "My advice to SDL now is to do its own thing and pull out of the consortium altogether."

IBM millions will link research centres

by John Riley
IBM IS to provide millions of pounds worth of computers, telecommunications equipment, software and personnel to link computers at 250 different European research institutions and universities by the end of this year.

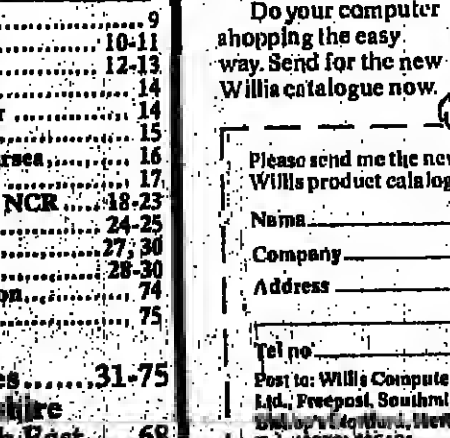

The aim is to link existing academic computer networks into a common network called the European Academic and Research Network (EARN). This will permit researchers in Europe to link with each other and also to link with US research establishments.

"This will be a multi-million pound project over a number of years," says an IBM spokesman, who is unable to define the precise arrangement by which the company is "providing" equipment. "It will be different in different countries and will depend on the installations."

The spokesman states that under the programme IBM will also provide maintenance support "depending on what equipment is installed". A leading researcher at the European Centre for Nuclear Research in Geneva (CERN) says the gateway to the various networks uses the RSCS protocol (remote spooling communications subsystem) which runs under IBM's operating system VM.

However, EARN is not designed to lock users into IBM standards and has nothing to do with IBM's own communications protocol SNA. It is based on Bitnet, a network developed by IBM for US research institutions which allows interconnection to a wide number of other manufacturers' networks and machines. Bitnet is based on IBM's own internal computer network VNET.

Some European researchers see IBM's move to set up EARN as a massive exercise to improve the company's image in Europe. Another view is that IBM may be promoting better links between research establishments so that it can more effectively measure the progress of its own research. The main drawback to the programme is seen as being the cost of the telecommunications lines, which are much more expensive than those in the US.

Parkinson re-emerges at Bair... Company profile looks at 100 years of NCR... 18-23 Two robot firms hit trouble... 6

IBM and BT set for cashless contract

by Dave Madden
IBM and British Telecom are set to win a major contract to supply networking and computer equipment for Britain's proposed cashless payment system.

A spokesman for the Committee of London Clearing Banks (CLCB) which is developing the system, says the deal will be signed this month. But IBM says that although its discussions with the CLCB are at an "advanced stage" it has yet to make a bid.

The system, known as electronic funds transfer at the point of sale (EFT/POS) will provide an online payment system as a national utility. It will allow retailers to replace money and cheque transactions with plastic card payment.

Brian McCarthy, a director of the PoS project team, says the system will use British Telecom's packet switching system (PSS). But he explains: "There is a problem of getting messages from the retail outlets to the PSS. It would be far too expensive for individual retail outlets to provide their own direct access."

British Telecom has offered a solution which envisages a network of minicomputers providing a gateway to the PSS. McCarthy says that initially those machines will come from IBM. But the CLCB has insisted that the hardware must be dual-sourced.

The committee intends to appoint a consultant to police the development. Logica and CAP were shortlisted, but Logica says that the terms of reference are "too vague", and it is not pursuing the matter.

Where do computers do their shopping?

From flexible disks to print wheels, ribbons to cables, the all come straight out of the Willis catalogue. Everything you need to run your computer, from one convenient source, at very competitive prices. It's so easy with Willis. Just phone through your order or post it if you prefer. We deliver within 48 hours or earlier if it's urgent. Do your computer shopping the easy way. Send for the new Willis catalogue now.

Please send me the new Willis product catalogue.

Where computers do their shopping.

STC profit soars to £92 million

by Dave Madden
STANDARD Telephone and Cables has reported strong growth in 1983. Its financial results for the year to December show pre-tax profits up 43% at £92.2 million on turnover ahead 46% at £920.6 million.

The company's domestic sales were up 33% at £647.4 million, and that includes some £305 million from British Telecom. Exports improved from £143 million to £257 million.

During the year STC spent over £100 million on acquisitions, including the recently rationalised electronics companies bought from ITC and International Aeradio from British Airways.

And it has had an immediate return: the acquisitions contributed £10.2 million profits on sales of £114 million.

Research and development cost STC £33 million in the year, and the company says it is committed to "further substantial investment in new products, technology and equipment to enhance the group's competitive position and growth prospects".

The company intends to continue to improve its productivity and expects a gradual reduction in its number of employees.

Despite the strong improvement, the pre-tax figure was on the low side of a wide range of City forecasts.

Last week Sir Kenneth Corfield, chairman of STC, spoke of the company's plans to take advantage of the increasing convergence of

CORFIELD... "We try not to give IBM a slap in the face."

telecommunications and data processing, STC, he said, would continue to become more involved in the processing and packaging of data before transmission.

But while Corfield believes STC has more computer experience than IBM has telecommunications experience, "we try not to give IBM a slap in the face, because we know what kind of slap it will give back".

While taking advantage of the convergence, STC is not trying to get into a new market, data processing, but to defend its networking business, Corfield says. "We are happy with the very large, very solid business we have."

Corfield predicts STC turnover will top £2 billion by the end of the decade.

STC fortunes will continue to be closely associated with British Telecom, with BT taking one-third of STC total produce. Corfield estimates that even in a more open UK telecommunications market, BT will retain at least an 80% share.

Nor does he see a case for breaking up BT. It is a monopoly by definition, whether in the public or private sector, and he points out that it is smaller than the smallest of the new US telephone companies formed after the break-up of AT&T.

IBM says limited shipments will

IBM turns heat on the portables

by Philip Hunter
IBM last week stepped up its pressure on the micro market with the surprise launch of its own Portable Personal Computer. The move came six months sooner than generally expected and puts the heat on compatible portables from firms like Compaq and Eagle.

The machine from IBM is technically the same as the desk-top PC, but is \$300 cheaper, at \$2,795, and in a 30-pound "portable" package.

It makes most portable PC-compatibles from rival companies little cheaper than the true blue IBM portable, and these will have to drop in price if they are to compete.

But the main target of IBM's announcement is Apple, which last month came out with Macintosh, a cheaper version of Lisa.

Macintosh at \$2,495 in the US is cheaper than the IBM portable, and is generally considered to be the technically superior machine. It looks better as a portable machine, weighing in at around 20 pounds. But much will depend on which company can deliver in volume first.

IBM says limited shipments will

US treats Apple fakes as crime

CRIMINAL charges have been brought against six people in California for smuggling fake computers and software into the US from Taiwan. This is the first time criminal charges have been made against alleged Apple fakes in the company's running with pirates. Previously the fakes have been brought in as civil cases.

So far copyright proceedings have been brought in the US against a recent Australian station that software is not covered by copyright law.

An Apple spokesman says: "This is a major setback for Apple, but for all other manufacturers. If that stands there will be problems outside the US and Canada."

The IBM Portable Personal Computer measures 20 by 17 by 8 inches. There is a 9in built-in amber monochrome display with room for 25 lines, and a full-size IBM-PC keyboard. Technically it is virtually the same as the full-size desk-top PC, with the Intel 8088 processor, and 256 Kbytes main memory, expandable to 512K.

The portable runs all PC programs, except those written only for the PC Junior.

It offers a universal power supply so that it can be used in countries with different mains voltages, and a 360 Kbyte hard-disk half-height drive.

IBM has also announced a cluster adapter that allows multi-user systems to be built from its PCs. The adapter and associated software enable up to 64 PCs to be hooked up in share common data files.

Systime's switch costs 150 jobs

by John Kavanagh
UK SYSTEMS builder Systime is pulling back from full manufacturing to concentrate on putting together systems from other companies' equipment. This shift in emphasis is one of the main reasons for 150 redundancies - more than 10% of the total staff - announced this week.

Meanwhile Systime's international re-organisation has continued with the appointment of the biggest shareholder, US computer manufacturer Control Data, as distributor in France and the Netherlands. At the same time Systime is cutting its interest in its software firm in Bombay to let its Indian agent as joint shareholder.

Systime builds its systems mainly from Digital Equipment processor boards, Control Data

BURY... "Still the best-looking personal computer."

ACT bids for rights to Sirius 1

by Dave Madden
APPLIED Computer Techniques (ACT) made formal proposals last week to acquire manufacturing rights to the Sirius 1 microcomputer from Victor Technologies. It expects a response within the month.

The company made its offer for Victor's assets after a Chapter 11 petition under the US bankruptcy code was filed against Victor.

Although ACT will not reveal details of its bid, it is structured so that ACT would get long-term full rights to manufacture Victor products in the UK.

Lindsay Bury, chairman of ACT, says the final decision will be made by the court, which sets on behalf of creditors like a receiver in the UK. "But we anticipate our offer will be accepted. As far as we know it is the only one".

ACT has also proposed buying exclusive worldwide manufacturing rights to the full range of Victor products. The company says it will be able to fund the arrangements internally.

Bury insists that Sirius is central to ACT's plans. "It is still the best selling personal computer, on a month by month basis, in the UK. We had orders for 1,400 in January."

If ACT succeeds it will consider manufacturing the Sirius at one of Victor's plants in California, although it has already done an assembly run at Glenrothes.

Last week Victor received a \$1.6 million loan from Security Pacific Bank, which is already owed \$28 million by the company, to meet immediate operating needs. Although Victor's workforce has been cut from 3,000 to 575 employees since last autumn, the cash is still likely to go on payroll.

Workstation maker triples turnover

by Dave Madden
CONVERGENT Technologies, the Californian manufacturer of intelligent workstations, tripled its turnover in 1983, and the company has reported sales of \$163.5 million. It turned over just \$55.0 million in 1980.

Bob Groves, Convergent vice-president, international sales, says the figure makes the company's 24 salesmen and 900 employees the most productive staff in any industry, anywhere.

And 1984 is unlikely to see that

GROVES... "Most productive staff anywhere."

growth slow. The company does not contradict forecasts of \$400 million sales this year, while its OEM deals so far, which include AT&T, Plessey, Burroughs, NCR and Prime, add up close to \$2 billion over the next three years.

About 90% of those sales will come from the company's new product line, N-Gen, Megaframe, and Workslate, though Groves points out that Convergent is still producing 350 of its original AWS workstations per day.

Groves says Convergent is set to

Protection Bill held up by MPs

by our Parliamentary Correspondent
ARGUMENTS that the Data Protection Bill should cover manual as well as computer-based information have met with deaf ears.

The Commons' standing committee chairman ruled that as the Bill is concerned exclusively with automatic processing, amendments seeking to extend the Bill to cover manual systems were out of order.

But Home Office Minister David Waddington moved an amendment to include in the Bill data that does not directly identify a person, but which does contain information which could enable the user to make an identification with the help of other circumstantial information.

A second government amendment made it clear that when additional information could complete the identification of a subject, it would be an offence not to make this clear when applying for exemption of the data from the

Bill's ambit.

In the Lords, an attempt to give a Commons Select Committee power to examine the government's nominee for the post of director-general of telecommunications, was made by Labour peer Lord Stoddart, but failed.

The government was beaten in the Lords on an amendment to the Telecommunications Bill, which was moved by Labour peers to prevent discrimination against rural areas in the cost of British Telecom services.

Minister of State at the Scottish Office, Lord Gray, announced in the Lords that the government hoped eventually to increase the number of technology training centres to 175.

NEB millions

NATIONAL Enterprise companies had a joint net loss of £91 million in the first six months of 1983, compared with £66 in the year before - but they made a net loss of £1.8 in the first six months of 1984.

The 1982 loss was £7.1 million. Electronics firm Inmos took sales to £11.4 million and losses by 20% to £3.9 million. NEM's operating profit - 11.4 million and interest against administrator costs, was £2.5 million from £1.8 million.

Law suit goes on

IN THE story published in last week's Computer Weekly it was stated that the law suit between Nixdorf and the National Computing Centre was over. This is not the case. The law suit has been settled, but Nixdorf is still suing the NCC for payment of royalties.

Nixdorf's public

WEST German Nixdorf Computer announced plans to go public this week. Only 20% of the shares to be sold initially but 50% will be registered for trading. All stock will remain with the Nixdorf family. Founder Heinz Nixdorf says he aims to double annual sales to over DM5 billion in the next four years.

Compass portable

US MICRO manufacturer Compass Systems launched the Compass upmarket portable micro, in the UK this week. It has 256K memory and 384K of bubble, and is built around Intel's 8086 processor family. Prices start at £2,995.

ONCE AGAIN, APPLE TECHNOLOGY POINTS THE WAY.

When we made our Apple II Computer, we started the personal computer revolution. This year, we're starting another.

APPLE - BEYOND THE BARRIERS

We set out, just eight years ago, to answer a question.

"Why should computers be large and expensive?"

The answer to that question was the Apple II. Since then, we've sold 1.5 million Apple Computers. We had gone beyond the first barrier between the individual and the computer.

Answering a second question took over \$50 million of investment and 200 man-years of software development.

That question was "Why should working with computers be difficult?"

And the answer has taken us beyond another barrier.

SO ADVANCED, YOU MAY NOT NOTICE IT

At Apple, we believe you have enough to do without mastering computer science, or ploughing through complex manuals, or learning a new language and memorising hundreds of commands.

We believe you should be able to buy a business computer and start using it. That's why we created Lisa technology - a technology that is unique to Apple.

And now, that technology is available on a range of machines with an entry price of just £2625.00.

A CHALLENGE TO YOUR IMAGINATION

The best ideas always seem the simplest ones. But getting the best out of Lisa technology means using the best in yourself.

Not to master computer science, but to help you do what you do best.

Helping you do what you do now - faster. Helping you do what you can't do now, for lack of time. Helping you do what you thought was impossible, in a way that's intuitive.

To help you reach your full business potential.

LISA - DON'T JUST TAKE OUR WORD FOR IT

Lisa technology has already won a RITA award.

And now, we've been nominated for no less than four British Microcomputing Awards.

And if you return the coupon, we'll send you a compilation of press reviews on Lisa.

THE TECHNOLOGY OF TOMORROW

Measured even by the standards of conventional personal computers, the new range of Lisa systems offer a prodigious technical specification.

But, to quote from Personal Computer News - "...When the incredible sophistication of the software is added to the equation, Lisa simply falls off the graph. It is not valid to compare any other machines with it. No exceptions. None."

We couldn't have put it better ourselves.

apple

Visicorp loses a battle

by George Black

VISICORP has lost the latest round in its battle over the rights to the world-famous Visicalc spreadsheet package. A district court in Boston, Massachusetts, refused to grant an order preventing the program's author, Software Arts, from using the trademark.

But Visicorp says that this only means the issue will have to be resolved in the main lawsuit, which promises to run on for some time.

"It is only a minor setback and we are pursuing the case," says Visicorp's boss in Paris, Jean-Claude Curcio. "We still do not accept that they have any right to terminate their agreement with us or to use the trademark."

Software Arts cancelled its five-year marketing agreement with Visicorp after it said that Visicorp was not using its best efforts to sell the product.

Software Arts president, Julian Lange, says: "It told Visicalc owners they could turn in their

product and get credit against their own Visicalc. That was clearly not maximising Visicalc sales."

He says Software Arts has therefore invoked a termination clause and taken back the trademark. "We will market it ourselves in future," he adds.

Last autumn Visicorp filed a \$60 million suit against Software Arts for allegedly failing to meet its contract to develop new versions of Visicalc for the lucrative IBM-PC and DEC markets. Visicorp was angry because it saw those vital markets slipping away to new competitors.

Visicalc was developed originally for the first generation eight-bit micros, where it was the dominant package on Apple and Commodore machines; but the arrival of 16-bit machines re-opened the field to a cluster of rivals.

Software Arts reacted to Visicorp's suit with its own suit for \$87 million, claiming that lack of effort by Visicorp at promoting the package breached their contract.

Win \$100,000 for major recovery

by Philip Hunter

A CHALLENGE has been issued to computer-literate mathematicians: program a computer to make a major mathematical discovery and \$100,000 could be yours.

The Fredkin Foundation of Boston has put up the money, and has appointed a 12-member committee of mathematicians and computer scientists to set the rules of the competition.

"Dates are open ended," says Woodrow Bledsoe of Texas University, who heads the panel. "If anyone's got something already we'll take a look."

It will not be sufficient for a computer to play a part in solving an important mathematical problem, Bledsoe declares. "The computer must make a substantial contribution, not just proof-checking. Let a man do the thing the computer normally does."

The winning entry could be a learning program, or a theorem-prover capable of tackling a number of different problems. But the famous program which assisted with the solution of the Four Colour Problem in 1977 would probably not take the prize, because all it did was check through a number of individual cases. There was nothing really intelligent about it, says Bledsoe.

Bledsoe says that the foundation hopes to award the prize by January 1985, but it could be much later than this if no satisfactory entry has been submitted by then.

Bledsoe admires the work of Bob Kowalski at London's Imperial College, who is a keen advocate of the logic language, Prolog. "Bob Kowalski is not on the panel, but I wish he was," says Bledsoe. Kowalski could be a contender for a prize, Bledsoe thinks.

The idea of offering a huge cash prize for solving a mathematical problem is not new. In the 1920s a German industrialist offered a big prize for a solution to Fermat's Last Theorem. Unfortunately the well-known run-away inflation in Germany at that time reduced the prize to pence within months.

At the time a distinguished mathematician professor remarked that there were easier ways to make a fortune than by solving Fermat's Last Theorem. The difference with the Fredkin challenge is that the money is in dollars, and must be won.

Radio show goes on

by Philip Hunter

BARRY Norman's BBC Radio 4 programme about computers has proved so successful that a second series is planned for broadcast in the autumn.

Called *Chip Shop*, the aim of the programme has been to entertain as well as educate, and so far all of the software broadcast to accompany the programme has been for playing games.

A Dutch invention called Basiccode, a program that translates the broadcast software into the local Basic dialect of most popular home computers, has gone down well.

So far the BBC has sold 20,000 of the Basiccode, with orders for 30,000 more, many of which will not be delivered until after the first series ends on March 17.

new five-part television series on robotics and production control systems in March.

Ian McNaughton Davis will present the series, with each 25-minute programme including practical demonstrations using the BBC Micro to control small robots.

In the third programme of the series, a ventriloquist's dummy will be connected to a BBC Micro with a robotics program which will control a set of pneumatic valves via a special hardware link.

The first programme introduced viewers to robotics in general, and the BBC's own robot, called Basher, in particular. The last programme enters the more sophisticated fields of expert systems, and speech and pattern recognition, with their implications for robotics in future.

Image system is unveiled

by Claire Gooding

THE wraps came off a "pioneering" image processing system in London last week when Data Logic announced its tie-up with its US originator, Integrated Automation Inc. Data Logic put the Image System on show to 200 people from central UK government authorities, multi-national companies and nationalised industries.

The Image System uses such techniques as optical laser disc storage and document scanners for the first time in a commercial product. This means that it is possible to retrieve an exact image of any document, including film, sketches, illustrated text and handwritten notes.

Data Logic quotes retrieval times of 12 seconds for fetching documents from a database of two million items. Since there are plans to network the Image System, it should be possible for retrieval to be done remotely, from anywhere in the world.

According to Alan Thomas, Data Logic's managing director, the Image System will turn into an enormous international library of documents. "It brings the paperless office one giant step closer," he says.

Data Logic has been discussing

THOMAS... "It brings the paperless office one giant step closer."

the contract with Integrated Automation for about 10 months. "The product fits in with the strategic direction we're taking towards image processing and graphics," explains divisional manager for Image Processing Alan Clark. "The whole area is being looked at closely by IBM and Wang, among others. What we have, here and working, is the ability to tackle the drawing side of the problem."

Clark sees the main areas of interest being among the electronic and engineering industries, where

a great deal has to be done by hand. "The Image System means that such industries will be able to use a laser system to retrieve and print hard-written plans and letters, engineering drawings, films and so on, as well as anything traditionally stored by data processing and word processing systems. At present most of this is done by hand."

"Typical of the kind of company Data Logic will approach with the system are the nationalised shipyards, engineering firms, such

as Rolls-Royce and Westland, British Aerospace.

At present the Image System costs around £300,000, but grafted Automation seeks manager Chuck Adams says that it will come down to around £100,000 as the technology becomes commonplace.

"At present we're the systems integrator working optical discs," he says. "In the Thomson CSP discs, which is already installed."

MICRO NEWS Simulator tests 16-bit boards

COMPUTER Automation has just made available in Europe test software for 16-bit boards based on a new technique that is almost independent of circuit complexity.

Software simulators that enable circuit designers to spot potential faults without plugging in a made-up board have been available several years, but the usual approach is to generate equivalents of each logic gate. The trouble is that modern boards often have 10,000 gates, and so the model becomes complex.

"With our model you forget that there are gates at all," says Bryan Webster, manager of industrial products in Europe. Instead the system uses a mathematical approach based on the timing diagram, and an input/output specification supplied by the manufacturer of the board.

Webster claims that about 90% of potential faults can be found with the simulation software. Intermittent faults caused by loose connections and interactive faults, such as wrong timing, that become apparent only when the board is connected to other hardware, cannot be detected, though.

SCHMID... "People do want to buy British."

Seagate moves to double UK slice

US WINCHESTER builder Seagate intends to up its UK market share. It has switched outlets in the UK from equipment maker Christy - itself an OEM customer of Seagate - to component distributor Manhattan Skyline. And through this new exclusive distributorship Seagate hopes to shift £1 million of kit, doubling its low market share. This is Manhattan's first move away from chips.

"We hold about 10% of the UK market," says Seagate European manager Christian Schmid. "We hope to improve on this. The £1 million target would give us about 20% market share."

The UK is well below the European average for Seagate's out of the Winchester market. Europe gives Seagate 40% share, compared with a worldwide market share of 25%, says Schmid.

"The reason for the UK's low showing is local competition," he says. "And that means Rodime. People do want to buy British and

they often look no further than the home-grown product."

Seagate faces local manufacturers in France and Germany too, Bull and BASF, but customers seem to show less chauvinism.

Salos through Seagate's European office account for only 6% of output, but the figures are skewed by the US success," says Schmid. The European figure does not include drives built into equipment in Europe which come through deals signed in the US, nor products that end up here in boxes imported from the US. And there are many very large OEM deals over there, from the likes of IBM, that come in 100,000 of units, rather than mere 10,000.

Seagate now produces 4,000 5¼in drives a day from its plant in Scotts Valley, California, and has the capacity to double that rate without quality suffering, says Schmid. A drive plant is opening up in Singapore plus a board-stuffing plant in Bangkok which turns

out the electronics for the drives. This factory also produces Seagate's new standalone controller board.

The Winchesterers made by Seagate are all 5¼in drives, going up to 20 Mbyte capacity. But at the end of last year the company sprang a surprise when it announced it was to produce its first 8in unit. Most Winchester makers are moving down in physical size.

"We want to aim at the market for drives over 100 Mbytes," says Schmid. "You need room for this, and it's a lot easier to do it on 8in drives. They use real conventional media, so are very cost effective. Seagate produces in volume, so whatever is available is good for us."

People would rather save money than space, Schmid reckons, and the drive will slip for an OEM price of \$1,500, rather than the \$2,500 Schmid reckons a 5¼in drive with equivalent capacity would cost.

Transnet opens up to large users

By Donald Kennett

IRBLAND's only indigenous micro maker, Transnet, is aiming for the large user market by opening up its Transnet local area network to high-selling machines from other manufacturers.

An IBM-PC interface was released last week and it is intended to be the first of a series of interfaces for DEC, Apple and ACT machines which would take Transnet beyond providing printer and file sharing facilities to Transnet's own Z80-based business micro.

Transnet was released quietly to dealers last October, according to managing director Noel May, and 18 or 19 systems have been delivered to UK users.

"This number of sales is quite good," he says, "because it is a product that takes a dealer quite a lot of learning to support - although there is no difference from the operator's point of view from a standalone system."

The company has 40 active dealers in the UK - its main market - many of which sell the Transnet Krypton micro into vertical markets supported by specialised packages, for example to garage, builders and antiquarian bookshops. It has sold about 1,000 micros since it started in the UK in 1981.

The network product has been picked up by 15 of the dealers and May says the number is growing every week.

Development of the network also began in 1981, and May says that launching it has enabled the company to move away from competing just on price because of the tax advantages the Irish government gave it.

It now has unique offerings that fulfil specific market requirements, he says.

The claim to uniqueness is based on the network's ability to support software under various different operating systems in a single-user mode, with some facilities for sharing files. This avoids the overhead associated with

multi-user systems and allows users to run their existing software unmodified, although software in the network monitor is designed to make it easy to modify applications software for file sharing purposes.

May says: "IBM has made a major impact on the market and companies like ourselves have to take account of this. That is why we chose the IBM-PC as the first machine for interfaces, because of its share of the marketplace and because the type of companies buying PCs are the kind that understand networking and the needs and benefits of sharing; also the larger company can have someone to specialise in managing the facilities provided by the network."

The Transnet controller contains a 10M byte Winchester disc and it costs £3,550. Workstations cost from £1,175.

The network transfers data at 500 Kbits-per-second, which May says is plenty to support up to 250 workstations in a typical office application. But there is also a 1 Mbps version to be launched in April.

It now has unique offerings that fulfil specific market requirements, he says.

The claim to uniqueness is based on the network's ability to support software under various different operating systems in a single-user mode, with some facilities for sharing files. This avoids the overhead associated with

multi-user systems and allows users to run their existing software unmodified, although software in the network monitor is designed to make it easy to modify applications software for file sharing purposes.

May... "Unique offerings."

WHO NOW HAVE MORE IBM 3380 COMPATIBLE DISK SUB-SYSTEMS INSTALLED THAN ANYONE ELSE WORLDWIDE?

WRONG AGAIN. WE HAVE.

On July 23rd 1983, National Advanced Systems (NAS) installed their first 7380 disk sub-system at American Telephone & Telegraph Corp (AT&T) in Jacksonville, Florida.

Since the purchase by the American telecommunications giant, NAS has installed systems in major corporations within the UK, Austria, France, Germany, Italy, Switzerland, The Netherlands, Sweden, Denmark, Australia, Singapore and Hong Kong.

Mitsubishi is on finer lines

JAPANESE chip maker Mitsubishi Electric has developed technology to produce devices with sub-micron features. Using a focused electron beam method, Mitsubishi's LSI R&D centre claims to be able to write 0.2 micron line widths with 0.1 micron precision.

chip no 1.1.1.1

COMPUTASTARS

Rules for Computadart

1. The competition will be run on a knock-out basis.
2. A match team must consist of three players.
3. The team may be selected from any three of a nominated five players.
4. It is advisable that five players are nominated wherever possible, even if a nominated player is not present, as it can ensure their qualification requirement should the team qualify for the finals later in the year.
5. No substitutes in the five nominated players will be allowed during the competition.
6. No additions/deletions/alterations to the team sheet will be allowed after it has been submitted.
7. The organisers will only recognise the nominated team captain in all matters of selection and disputes.
8. All teams must report at the required time and be ready to play when called upon. Failure to play when called upon will result in the team being eliminated automatically.
9. In the event of their not being exactly two, four, eight or 16 teams an elimination competition will be held.
10. In all matches, the throwing order of the members of the team must be in strict rotation. Any player throwing out of sequence will cause their team to be instantly disqualified.
11. In matches of three or more legs then the throwing sequence must be maintained. (The first nominated player always starts for their team.)
12. All competition matches will consist of the best of three legs... 501 straight start and finish with a double (or the Bull).
13. In all matches the order of throwing will be decided by the toss of a coin. The team that wins the toss will throw first in leg one and three (if necessary).
14. The responsibility for acceptable behaviour for both teams and their supporters rests with the team captain.
15. The elimination competition (see rule 9) and seeding will be conducted as follows: a) Each team will be required to go round the board in strict numerical sequence 1 to 20 and then scores any double, any treble, 25 and finally the Bull. b) The lowest number of dots thrown to complete the above requirement will determine the first 75% of the seeds for the knockout competition. c) All teams not in the first 75% will have the chance to try again for the remaining 25% of the places which will go to the teams with the lowest dots thrown in a series of two attempts to qualify.
16. In the event of there not being a qualifying round, the seeding for knockout competition will be done as per rule 15.
17. Practice throwing, if any, will be determined by the referee.
18. These rules have been formulated after discussion with the British Billiards Organisation. However, the referee on all matters is final.

Computastar 6 person teams will not be held at heats, UK final only.

Company..... Name of contact.....

Address.....

Telephone..... Extension.....

Signature of DP manager or equivalent authority.....

Position held.....

We would like to compete in the following region:

BARNLEY Saturday May 5
CRAWLEY Saturday June 9
BIRMINGHAM Sunday June 3
ENFIELD Saturday June 16

Please circle appropriate region

Enclosed is a... to cover entry fees for the team(s). Cheques should be made payable to Computastars. In all matters relating to the rules or conditions of entry the decision of the organisers is final. Please send entry form with fees to Computastars, 117B High Street, Croydon CR9 1QG. Telephone 01-688 4400.

SOFTWARE FILE

Tools get rough ride

NO software tool currently available provides all the facilities needed for project control. This is the conclusion of a working party which contributed to the Department of Trade and Industry's STARTS guide published last week.

The working party says the most serious deficiency in all the relational database management system tools is in estimating the size of applications programs. Being able to size a project as early as possible and refine the estimate as more detail becomes available is of crucial importance, it says.

But the working party is encouraged by the discovery of two stand-alone programs for sizing, called Price-S and Slin, even though this is still far from being a precise science.

The STARTS (software tools for application to large real time systems) guide was launched last week by DoTI, the National Economic Development Office and the National Computing Centre. It will form the focus for a number of public sector bodies striving to standardise the use of such systems.

Most project control tools still require a large mainframe to run on, the working party has found, but there is a move towards running them on 16/32-bit multi-user micros which could lower the barriers to their use.

Four other working parties report on other key aspects including requirement specification, the design process, verification, validation and testing and version and configuration control.

The first of these groups stresses that the choice of methods was a complex issue and management must be prepared to invest time and money in evaluation, tailoring and training. The cost of acquiring the tools would only be a small part of the total, it says.

It quotes a survey of US aerospace contractors on the major problems facing project managers. Requirement specification is the most frequently mentioned - 97% of managers list it.

All the other major concerns depend heavily on the success of the requirement specification, it is noted. Many managers claim to have tried requirement analysis and found it wanting, the team says. This is due to a lack of understanding of the process and its importance, a lack of tools and of commitment by project managers.

The latter is illustrated by "rationalisations and excuses", such as "it cannot be done cost-effectively", "it is not really necessary", "it cannot be done at all" or "the staff will not understand".

The design process working party reports that much of today's software does not have the basic characteristics of a well-engineered product. Software design is still in the craft phase, it says. But it is encouraging that this is now recognised.

Few tools are marketed in the UK to support the process of verification, validation and testing, according to the guide. In the US, however, over 200 are available, because of the closer collaboration between developer, universities and government.

HOWES... "Gives vendors a far broader market at the lower end."

Apollo widens Domain

by Claire Gooding
APOLLO Computer has launched a third-party software scheme to help bring its Domain processing system to a wider market.

The software supplier programme will give package vendors a central marketing service, including a catalogue, values and promotional literature, demonstrations and seminars, and regional shares of Domain software.

The scheme imitates similar co-operative efforts started by manufacturers such as Digital Equipment and Hewlett-Packard.

"The reason Apollo is attractive to companies is the number of applications that run on the system," explains managing director David Howes.

hardware on our comparatively low-cost system. It gives the vendors a far broader market at the lower end, where companies can afford a single-user machine."

Apollo is aiming to sign up 30 packages in the next few months, concentrating on its markets of engineering, CAD, architecture and civil engineering.

There are two British companies, Jones, Cassidy and Mellor of Bedfordshire, and Chan of Wimbledon, among the six whose products have been signed.

"The TAS package from Jones, Cassidy and Mellor is typical of the sort of product which was previously only available on mainframes or bureaux," says Howes.

"It's the kind of package which is ideal for a single user - for instance an engineer who needs to run optimisation programs."

Wanted - your views

COMPUTER WEEKLY and Datasolve Education are conducting a joint survey on the use of structured methods within UK data processing departments.

Readers are invited to complete the form below and return it to CW Structured Survey.

Name

Address

..... Tel. No.

1. Do you use structured methods for analysis and design? Yes ☐ No ☐

2. If yes, which methodology?

Do you use structured programming techniques, and if so, which?

.....

Why did you change to structured methods?

.....

What benefits did you expect to get?

.....

Have the expected benefits materialised?

.....

What specific structured systems tool do you use? (eg data flow diagrams, structured walkthroughs, data dictionary, structured English, decision tables, data structure diagrams, others.)

.....

3. If no, did you decide not to change because of specific problems, and if so, which problems?

.....

Do you plan to take steps towards structured methods?

.....

Within the next six months? ☐ 12-24 months? ☐ 6-12 months? ☐

Room L218 Quadrant House, The Quadrant, Sutton, Surrey SM2 5AS.

A selection of responses will be asked if they can be visited for a more detailed assessment and a report on the conclusions will be published in Computer Weekly.

Olivetti turns to MS-DOS for its micro

OLIVETTI appears to be moving away from its own in-house operating system towards the standard MS-DOS for its M20 microcomputer. Olivetti has agreed with Peachtree, a major name in the IBM Personal Computer market, to market the Peachpak productivity suite on its M20.

Peachtree word processing, spelling proof reader, mailing list manager and the Peachcalc spreadsheet programs will be bundled with every M20 running the MS-DOS operating system. Deliveries are scheduled for the spring.

Scicon complex

BP's computer services arm, Scicon, has bought a 33-acre complex at Milton Keynes to house 400 new staff over the next two to three years. Scicon, which employs around 900 people, opened offices in Milton Keynes 10 years ago and is predicting a 20% growth in its turnover to £24.5 million this year.

Alvey seminar

A SEMINAR on the Alvey Programme's initiative in software engineering is to be held on March at Baden Powell House, Queen's Gate, Kensington. It is being organised by the British Computer Society.

Texas generator

TEXAS Instruments has introduced a new Cobol program generator for its DS990 and business system machines. It is derived from System-80, developed by Phoenix Systems of Pittsburgh, and is claimed to produce over 5,000 bug-free source code lines a day. UK prices will start at £4,500.

HARRY... Estimates there are 200 packages under Unix.

Uniplus system gets them talking

by George Black and Claire Gooding

ANOTHER brick has been laid in the Unix wall with the advent of a system that allows easy communication between various makes of micros and minis.

The networking software from the Californian developer, Unisoft, called B-Net, will allow any machine running under Uniplus, Unisoft's close copy of Bell Labs' Unix, to be networked through the Ethernet local area network. This holds out the prospect of easy communication not only between 68000-chip micros, but also with the superminis like the DEC Vax.

This could become significant towards the end of the year, when a new generation of "true superminis" is expected to hit the market. The machines will offer the power of medium-sized mainframe for under £10,000. These machines, built on 68010 chips, are likely to run a Unix System V system in a six to 10 user configuration, and could pose a serious threat to business of mini manufacturers like DEC, especially DEC's PDP-11 range.

Another push towards System V has come from Microsoft, which now says it will follow the direction proposed by AT&T and Bell Labs. Microsoft has been in discussion for months with AT&T over the new licensing arrangements for System V, which it feared would squeeze margins on its Xenix lookalike, but has decided it must stay in line with the standard. AT&T appears to want a single system to be dominant, to ease its move into the hardware scene.

Logica is now engaged on a study of the conversion of Xenix for Microsoft, but does not expect the upgrade to be available before the end of the year. Xenix-MS-DOS compatibility is still the priority project for Microsoft.

One of the first to climb aboard the B-Net bandwagon will be Plessey Microsystems, which is busy lining up an array of software

for its System 68. It has been negotiating with Precision, Redwood, Bivius, Shortlands and Computerhouse for commercial applications and has decided to bundle Root's Roommap menuing facility with all its machines.

Plessey's marketing manager, Peter Harry, estimates there are now at least 200 packages available under Unix.

"It's certainly a small number compared with around 1,000 for CP/M, but it's quite enough to work with," he says.

A boost for the applications market came from Cobol specialist Micro Focus last week. It released its Ansi standard Level 11 compiler and tools for Uniplus to be used by Root Computers and other Unix OEMs.

Micro Focus product sales manager Chris Wilson says that half of the Unix packages available are written in his firm's Cobol.

"Cobol is the glue which binds the whole Unix thing together," he claims.

Fortran, which has to handle data rates up to 375,000 bits per second.

"We did consider Coral at first but settled on Fortran as the best candidate," explains Boon. "Ada didn't get a look-in; it's still not mature enough for our purposes."

The team of 18 is expected to spend two years on the project.

Software File is compiled by George Black

China helps with oil rigs

CHINA has developed software for the design and analysis of oil rigs, according to China Daily. It quotes Yu Xuell, vice-director of the research arm of the Bohai Oil Company, as saying the program was written by his firm with the Dalian Institute of Technology and the Scientific Research Institute of Oil Exploration and Development.

CAP wins contract to monitor BT calls

by Claire Gooding

THE industrial branch of systems house CAP has landed a major contract worth £2 million to monitor British Telecom's international calls. CAP landed the contract for software to monitor and analyse data at the international telephone exchange against stiff competition from GBC, DEC, Logica and SDL.

The software is designed to handle international calls and convert data into a form by which British Telecom can sort out the complex accounting for the various international calls that get routed through its equipment in the UK.

"The prime motivation is to settle the cross-charging problems that arise from international calls," explains plant control manager Michael Boon. "The situation is very complex, with some calls, for example, from African countries to

the US, sent via Paris and London. There has to be a way of accounting for these calls by assessing what goes on at the switching centre."

The project will analyse the telephone traffic at the international exchange, Mondial House, collecting information directly off the exchange. The team will be using

Fortran, which has to handle data rates up to 375,000 bits per second.

"We did consider Coral at first but settled on Fortran as the best candidate," explains Boon. "Ada didn't get a look-in; it's still not mature enough for our purposes."

The team of 18 is expected to spend two years on the project.

Software File is compiled by George Black

PRINCIPLE:

Often the smallest things known to Man can release power of unparalleled potential.

PRACTICE:

Introducing the £2532 DESKTOP GENERATION Micro with the power to run up to 4 terminals.

The DESKTOP GENERATION™ from Data General takes you further than you thought any personal computer could.

It can support up to 4 terminals without the need for a mini or a mainframe. These multiple groups can be connected locally. Or geographically dispersed by connecting them through a Post Office X25 packet-switched network or an IBM SNA network.

Nothing else offers so many options in one box: it's perfect for data processing, office automation and technical applications.

One person can be using it for electronic mail, filing and diary management. Another for word processing. Another for data and information processing. And yet

another for drafting, project management and analysis. All at the same time!

And the starting price for the single workstation is only £2532.

ALMOST UNLIMITED COMPATIBILITY

Firstly, this amazing micro is compatible with all the applications written for Data General equipment over the past 15 years.

Secondly, it takes the widest range of software of any desktop.

Thirdly, it can link-up with IBM SNA and industry standard networks.

Other micros may be fine for computer games. But when there's serious work to be done, come to Data General.

Data General
a Generation ahead

Marketing Communications Division, Data General Limited, Hounslow House, 724-734 London Road, Hounslow, Middlesex TW3 1PD. 01-572 7455.

I'd like all the facts on the DESKTOP GENERATION™ - the system that puts you a Generation ahead.

PROFILE

Japan trade barriers are a myth, says NEC boss

AKIRA MIYAZAWA believes there is plenty of scope for Europeans to trade in Japan, particularly in telecommunications. As managing director of NEC Business Systems (Europe) based in London for the last two-and-a-half years, he thinks that Europeans could look profitably at the Japanese market.

"It is a myth that there are insurmountable trade barriers," he claims. "There are no barriers if European manufacturers take the right approach." For a start, he believes they should open offices in Japan to study the market, and also make

by John Riley

use of Japan's external trade organisation (JETRO) centres which are based in each capital city.

"JETRO's role is not only to export goods from Japan, but to promote imports as well," he says, emphasising the opportunities in the telecommunications area.

"Nippon Telegraph and Telephone" - the Japanese equivalent of British Telecom and which is also to go private this year - "is now opening up its markets, and US manufacturers are approaching it to sell equipment," he points out. "I do wish that European manufacturers would take similar efforts to exploit that market."

He adds that there are also opportunities in the Japanese compu-

ter market, taking Sinclair's success in competing with NEC's own 6000 series of home computer in Japan as an example.

Although NEC has concentrated on microcomputers and printers in its computer-related hardware drive into Europe, it is a major company in Japan, covering the whole field from home computers to mainframes. Its share of the business microcomputer market in Japan is, according to Miyazawa, about 40%.

NEC has expanded its microcomputer range gradually, starting with its two eight-bit machines, the 8000 and 8800 micros, followed by the launch last summer of its Advanced Personal Computer (APC). The next stage is to secure a wide user base for the APC and then eventually introduce its Astra business system, which is popular in Japan, and perhaps later its minicomputer range.

Miyazawa is now conducting an intensive marketing drive for the APC, expanding his dealer base, and is on the look-out for good software. "To be successful with the APC we need to look for vertical markets," he says, "and need close collaboration with vertical software."

Software is taking on a "more important role" in the company at large. NEC recently bought up a major Japanese software house and

MIYAZAWA... "No barriers if European manufacturers take the right approach."

is setting up small software companies to work in dedicated areas. "Maybe we'll use the intelligence of European software companies, especially in the UK," says Miyazawa. NEC has already signed up Systematics International to put its accounting packages on the APC.

Sales of the APC have not initially been as large as Miyazawa would have liked, but he is confident that NEC will ride through the wider shake-out currently going on in the microcomputer market.

"The PC business is very risky now and only a few companies, less than 10, will survive," he says.

Miyazawa plans to add another 50 dealers to the 100 he has so far. They will either be general dealers or specialist dealers, specialising in areas such as graphics or CAD/CAM. He does not intend to bring NEC minicomputers to Europe just yet.

"We're not making any effort to sell minicomputers in Europe," he explains. "We have a very successful machine in Japan so it is not a marketing problem. It is a question of software."

While trying to dispel European fears that the Japanese marketplace is a difficult one to enter, he also emphasises that Europe, and especially France, is not easy for foreign communications manufacturers.

"The European market is very difficult for communications manufacturers to penetrate," he says, "because each has its own indigenous manufacturer. But we can see the UK and the Nordic countries beginning to lift barriers so that telecoms can become more liberated."

Miyazawa emphasises the importance of collaboration, and says Japanese companies would be willing to participate in the British long-term R & D Alvey programme. He is vainly proud of Japan's fifth generation programme, believes that collaboration between competing companies in long-term research can work, and adds: "We are calling for international collaboration in the fifth generation programme."

He considers the mix of "competition, co-operation and interde-

pendence" as workable, pointing out that in the fifth generation programme "a consortium of competing companies conducts fundamental research together. They develop fundamental technologies which are brought back into each company, and then the applications technology, based on that work, is developed by each company as it goes in different competing directions."

He says NEC will put more effort into peripherals, particularly with disc drives and discs, but was reluctant to give further details.

On the mainframe front, NEC gave Honeywell Information Systems distribution and manufacturing rights last autumn to its S-1000 mainframe which runs at 15-54 mips (millions of instructions per second).

Miyazawa affirms his commitment to Europe and in the UK market, instancing NEC's factory in Livingston, opened last summer, which employs 200 people and on which £40 million has already been spent.

NEC is also about to move to a new London headquarters, four times the size of the current one.

DOWNTIME Getting that image right

LIFE on the way to the top is to fulfil, or so the people at world's second largest computer company think.

I was chatting to DBC's managing director in the UK Geoff Shingles, the other do about the company's sponsorship of the Schneider Trophy air race.

This, by the way, was for a long time the world's top air race and 1931 when the British won it outright with a plane that was the precursor of the Spitfire. Geoff assured me that there was a connection between 1931 airplanes and Digital in that both involved leading high technology for the day.

But digging deeper into DBC's motivation for sponsoring a race, I found the unfairness of a Digital life.

The company has recently lost a survey of the general public to find what they thought of DBC. The answer was an ego-crushing "Not a lot". Many were under the impression, when pushed, that the company made watches.

DEC hopes that this will change a little when the air race is run, the Isle of Wight this June.

Digging their own graves

TO continue on the theme of the unfairness of life in general, I must be added that some people are never satisfied.

Most of us would think that life in Silicon Valley is fairly miserable. It's pretty good, it's near San Francisco, which is still a very nice city, it's close to some great skiing, there's the Pacific to swim in, it's a hell of a lot of fun.

People also get paid a lot for working in an exciting and interesting part of the computer industry.

But is that enough? Apparently not. The current war from the poor little rich girls of Silicon Valley is that they are having difficulty with their "interpersonal relations".

It would appear that in their duty hours, the Silicones manage to rack up the highest divorce rate in the US, the highest incidence for child abuse, high cocaine and marijuana use and a generally messy social structure. They spend well beyond their comfortable means.

Low of people just go out of their way to be unhappy, and I'm afraid I find it difficult to dig up a great deal of sympathy for them.

John Mills is managing director of Performance Software (UK).

ComputerWeekly

Thursday, February 23, 1984

These absent MPs are a disgrace

IAN Lloyd, chairman of the Parliamentary Information Technology Committee, was quite right to describe the turnout of MPs at an important debate on his pet subject last week as "embarrassing". He could have gone further: it was a disgrace.

The occasion for the debate was a motion by Labour MP for Jarrow, Don Dixon, who called for a searching review of information technology policy.

All political parties agree on the need for a regeneration of British industry, and the new technologies are deemed to be a key factor. But the debate last week drew only about two dozen MPs.

The current obsessions of MPs, which include trade unionism at GCHQ and Mark Thatcher's business dealings, do have important principles behind them. If, however, they cannot rise above the daily political backstabbing to discuss how to create wealth and jobs then we shall fail to win the fifth generation race and we shall not deserve to.

Is this what we elected them for? It is no wonder they do not want television in the chamber. On the radio a few rowdies can make it sound as if the place were packed. Television would expose the absentees. The frivolous might be tempted to comment "let privatisation begin at home - no doubt Hitachi could run parliament more cost-effectively."

As Lloyd sardonically observed, the absent majority were grateful to the honourable member for long-suffering Jarrow, who gave them the chance to stay away. Maybe they are "redundant" workers?

The information technology minister, Kenneth Baker, not surprisingly did not rise to Lloyd's challenge about the Cabinet's commitment to science and technology. His expression indicated clearly enough - "you know I've done everything I can" - and MPs on all sides acknowledged this.

Indeed, Baker may have secretly welcomed Lloyd's criticisms of government priorities. In his now familiar speech listing the fruits of his regime, he indicated that he had done all a man could from outside the Cabinet. Of course, he hinted, were there a voice inside the Cabinet on these matters, things might be different.

So far having a science graduate for Prime Minister has benefited science as little as a woman PM has benefited women.

Let us have a Science and Technology minister in Cabinet who will call regular debates and ensure that the Whips do not give the boys a day off.

At last, some action

AFTER years of giving moral support to the UK software industry, the government has finally put some of its money where its mouth is.

It should be congratulated on this, and it is perhaps ungracious to point out that Ministers have been proclaiming that "British software is the best in the world" without making any noticeable effort to use it.

Now those departments will be able to call in the specialists from the private sector for projects for which its own computer staff lack a depth of experience.

This should increase the quality of government systems. It should also be a boost to software houses. This will not merely be the money for the contracts but also the references that it will give them in their bids for export work.

It has long been a justified complaint of UK software houses that when bidding for overseas work they have had little comeback to the question: why don't you do much work for your own government?

This problem should end with the implementation of the new policy.

But the government must implement the policy carefully. It has its own competent computer staffs and should not go to the private sector for work that can be done by them.

The government must make it clear by its actions that outside contractors are employed only to supplement its own staff and not to replace them, or it will run the risk of demoralising its own computer professionals.

1984 and all that . . .

THIS week's example of the strange things people say about computers was sent in by J. V. Hughes of Bristol, who wins £5. Reliance upon the central processor for online work means that the machine must be reliable - a modem for telephone fault finding by the consultants is essential.

LETTERS

Postcodes were not made for computing

MIGHT I, as a purveyor of useless information who is not in the Post Office's employ, make a few observations in reply to J. D. Thompson's letter (Computer Weekly, February 9) on postcodes.

Postcodes were never designed to be computed. They should be treated in the same way one treats keys in an index - sequential file - ie they should be as short as possible while still having enough redundancy to enable errors to be trapped and hopefully corrected.

Postcodes can be partially validated by using look-up tables. If the codes are studied carefully, one will notice that 120 out of a possible 652 area codes have been used and on average three or four out of a possible 10 sector codes have been used. In both these fields, the occurrence of the characters used is semi-random.

Finally, the Post Office only uses 20 out of 26 letters for the final two characters, thus giving a further degree of cross-checking. An algorithm that validates a postcode to sector level should oc-

cupy less than 8kb (including look-up tables). (In Computer Weekly's postcode - SM2 5AS - the area code is "SM", the district code is "2" and the sector code "5".)

I have no experience of the accuracy of the National Grid co-ordinates supplied by the Post Office, but believe that the Post Office would do itself and the public a favour if the National Grid co-ordinates were published in the postcode books. Many people would then buy the postcode books for use as an index to their Ordnance Survey maps.

Having written this, I am not suggesting that the postcode system is perfect - far from it! It should not be necessary to have seven different formats of postcode where most other countries make do with one. (For the record, the seven formats are: XX99 9XX, XX99 9XX, X9 9XX, X99 9XX, X9X 9XX, XX9X 9XX and XXX 9XX.)

Dicing with problems

THE solution given to the Puzzler (Computer Weekly, February 9) is the one usually given to this problem, but is by no means unique without an additional constraint.

The puzzle was: how to mark the faces of two dice so that the probability of any score between 1 and 12 is the same on one throw of both dice.

If we allow negative "pips", there is an infinite number of solutions obtained by adding to each face of one die and subtracting k from each face of the other, given an initial solution.

I have not proved it, but I conjecture that any solution has dice with equal numbers of each type of face (ie six different, three pairs, two triples).

A total of 12 possible outcomes means that solutions must be of the form six different times two triples. One die must have a 0, the other a 1.

Because of the addition/subtraction rule, we can say without loss of generality that one die has six different faces, 1 included, the other has three 0s and three 1s on its other face. It is fairly easy to see that this other face's value must divide six.

This and addition/subtraction rule give eight solutions with non-negative faces:

123456	000666
012345	111777
123789	000333
012678	111444
1256910	000222
014589	111333
1357911	000111
0246810	111222

The 1 given, the first is the only one which has no face over 6. The best practical solution is to use a single dodecahedral die!

Puzzler answer is incorrect

THE answer to this week's Puzzler about dice is incorrect, in that you specify two six-sided dice which are specially marked. Your answer includes one die with standard markings.

I believe the correct answer should be one die marked 0 to 5, and another with three 1s and three 7s. This also gives the same result.

PLATFORM

Some hard facts on software

A RECENT Platform (Computer Weekly, January 19) discussed the choice to be made between packaged and purpose-built software. I believe it lacked appreciation of packages, so was somewhat one-sided in its conclusions.

The development of any new programming application either in-house or by a package supplier, is costly business. An average "per man" cost of a team - including senior management, project leaders and junior programming staff - is now more than £2,500 per man month at today's salaries, taking into account computer time and accommodation.

While the previous article cited low cost as a benefit to packages, it failed to point out just how dramatic the cost difference is. Packages can generally cost about 90% less than the true cost of doing-it-yourself.

Let's take an example in an application relevant to most companies using computers, there's a typical example, is "found in payroll packages. The above team would take about three man-years to develop even a simple payroll package, or about nine man-years for a payroll package of medium complexity.

Even at the average per man price estimated above, the cost curve mounts dramatically as the complexity increases - £90,000 for a simple payroll, rising to nearly £270,000 for the medium complex payroll.

To buy equivalent payroll software from package suppliers would cost the user about £30,000 for a medium-scale system.

Costs are the key to the present trend toward the package supplier. Large computer users would previously rely on their own in-house computing staff to develop most commonly-used software.

Nowadays, more reliance is placed outside, largely due to the prohibitive costs of in-house development, and the timescales involved.

Good package software allows the company to choose its own rules, and mode of operation. It does not impose them. The days are past when packages were designed for a specific application in one company, then sold on as "packages" to other customers in order to spread costs.

Many organisations entering the field of computerisation will start with an incomplete idea of what the computer has to offer. This

often results in specially tailored, somewhat inflexible programs being written, which are quickly overtaken by events.

Often, the longer a computer is installed, and the more change has occurred, so the more the user will perceive new ideas and possibilities for the computer that were not even dreamt of when the machine was first installed.

Subsequent changes to bespoke software may be costly. One-off software tends not to be designed for such change and growth.

On the other hand, the package company, with its view and experience of a large number of organisations, is in a good position to anticipate future requirements and to structure its software accordingly.

But cost and flexibility are not the only factors in the choice between packaged and purpose-built software. A decision on whether to lease or buy a package can result in a string of benefits for the computer user.

Quite as important as the original purchase cost considerations is the one of maintenance. The cost of software is related far more to the cost of on-going maintenance to meet changing

management or statutory needs, rather than original purchase costs. It is vital that not only the original cost can be spread among many users, but also that maintenance and upgrading costs can likewise be spread. Once a package is modified, all subsequent changes will be much more expensive, creating a continuous worry to the software user, and a drain on his resources.

With a package, the purchaser is buying peace of mind and fixed costs for the future.

An example of the differences between users of bespoke and package software can be found in the 1982 Budget, which involved many changes in personal tax allowances and employee/civilian contributions. Contrary to popular belief that reasonable notice is always given, on this occasion changes had to come into operation within one month of their announcement.

This caused considerable problems for some organisations, but for those who were leasing software packages, it was a problem they didn't have to worry about.

Users who develop their own software will also find it hard to keep up with package suppliers on

other elements - speed of implementation, security against invasion of sabotage, and maintenance, to name a few.

Finally, the computer is a management tool, there to perform the tasks it is allocated with as much efficiency, speed and reliability as possible, with preferred added characteristics of low-cost, easy maintenance, and upgradability. Package software helps to achieve those organisational aims.

If an organisation really cannot find a package that meets its needs, more and more are turning to language generator software to do the job.

Bespoke software comes a poor third and is, in the long run, definitely not the least expensive course.

John Mills is managing director of Performance Software (UK).

PUZZLER 10 YEARS AGO

IN this variation on the cryptarithm theme, each digit in the multiplication sum is one of the four single-figure primes (2, 3, 5 and 7). The only possible solution to this rather tough problem is on page 75.

FROM COMPUTER WEEKLY OF FEBRUARY 21, 1974: The first order for an ICL 1901T was placed by Birkdale Quaker in Birmingham. Bill Read was appointed managing director of Unifac UK. British Computer Society subscriptions were increased to £16 for a fellow and £12 for a full member. Trafalgar House invested £850,000 in Allied Business Systems.

Making computers work for you

For the last 20 years, Hoskyns has helped thousands of Britain's major companies into the computer age. Now that the world is becoming more computer oriented it is even more important that you choose Hoskyns for the systems and services that will enable your company to get the very best from today's information technology. Through Hoskyns you have access to the collective experience of twenty years successful operation in this rapidly advancing field, the technical excellence with which the name Hoskyns has become synonymous, plus the unrivalled resources of one of the world's largest computer services companies. At Hoskyns the commitment we have to the computer industry means that our clients will be guided securely and expertly into the rigorously demanding future which lies ahead. Hoskyns Group Limited, Africa House, 64-78 Kingsway, London WC2B 6BL. Tel: 01-242 1951.

PEOPLE

■ Apple Computer has stepped up its European sales and marketing with the appointment of Michael Spindler (above) as vice-president, European group. He previously served as Apple's general manager for Europe.

■ Michael Raby has joined Redifusion Computers as technical author in the technical publications department. He will initially be engaged in the Teletext project, preparing user manuals on application software. Previously, he was customer support executive at Comshare for four years.

■ ISG Data Sales is expanding further into the North with a new sales manager, Ian Patterson. Patterson will run a new Birmingham branch office.

■ Dyan of Belgium has appointed Andy Warren as software duplication specialist. He was previously sales manager with Data Concept in London, in charge of diskette sales and formatting.

■ Tony Stevens, formerly with Datapoint, has been recruited by Ericsson Information Systems to head the data terminals division as national sales manager. Sheila Rao has joined as marketing communications manager, based in Ericsson's City office, which will now become a market communications centre. Ron Parkin, formerly Midland regional manager for business systems, has been marketing and distributor development manager, while Ken Briddon is to become national sales manager, business systems division. He was previously Southern area sales manager, business systems.

■ Zynat has appointed Iain M. Brown as European sales manager. He has nearly 20 years' experience in sales and sales management with companies such as Datacall, NCR, Avery and ECS.

■ John Durling, formerly sales manager of Manufacturing Data Systems, has joined Calma to help strengthen its sales and marketing operation for CAD/CAM systems in the UK.

■ SVC Television has appointed Julia May to supervise the creation of a library of software for use in conjunction with the newly-acquired Quantel PAL Mirage. He was previously with Marconi Avionics.

■ Julia Holland has been appointed assistant director (marketing) for Taurus Microsystems, with responsibility for the company's own dealing room system. She was previously European money market manager for Reuters.

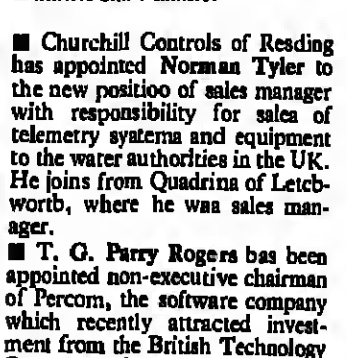

■ Andy Judge (above), who joined Synergy as an analyst/programmer, has been promoted to implementation manager. This is a new function and he will be responsible for overseeing major implementations of Synergy's distribution of software packages.

■ David Corcoran (left) who was assistant manager, technical support group, at Guardian Royal Exchange Assurance, has been appointed manager responsible for GRE's life computer systems development. James Hudson (centre), previously data processing controller of Guardian Royal Exchange Assurance general insurance systems, has been appointed manager of its general and financial systems development. He joined GRE as a

■ Yvonne Dowling (left) has joined Corporate Modelling's team of consultants and is responsible for providing nationwide consultancy and training for Finax users. She previously worked for the Commonwealth Development Corporation, a Finax user, from 1979-83. Martin Armatrudey (right) has been appointed technical assistant and works with Corporate Modelling's team of programmers. His responsibilities include providing technical support to users, performing site installation of Finax and organising demonstrations for exhibitions and seminars. He was previously an operator with International Distillers and Vintners.

■ Churchill Controls of Reading has appointed Norman Tyler to the new position of sales manager with responsibility for sales of telemetry systems and equipment to the water authorities in the UK. He joins from Quadra of Leicestershire, where he was sales manager.

■ T. G. Parry Rogers has been appointed non-executive chairman of Percom, the software company which recently attracted investment from the British Technology Group and the National Computing Centre to develop and market personnel management systems which can operate on most microcomputers. Rogers is director of Personnel and Europe, the Plessey company, and was formerly director of personnel for IBM (UK).

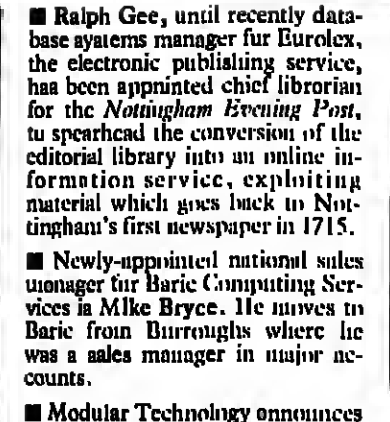

■ Antilles-born Peter Gould has been appointed sales manager for the Benelux and Scandinavian countries by Plessey Microsystems. He joins from STC where he was responsible for the production of hybrids used on System X line cards.

■ Gordon Tebbutt has been appointed as dealer manager, Southern, for Memory Computer Systems. He was appointed to recruit new dealers and to support the existing dealer network in the Southern area.

■ WordNet International has appointed Tony Blyth to the board of directors as general manager. He joins from the Canadian-owned manufacturer and distributor of word processing systems ABS, where he was UK director of special projects.

■ Ralph Gee, until recently database systems manager for Burolex, the electronic publishing service, has been appointed chief librarian for the Nottingham Evening Post, to spearhead the conversion of the editorial library into an online information service, exploiting material which goes back to Nottingham's first newspaper in 1715.

■ Newly-appointed national sales manager for Baric Computing Services is Mike Bryce. He moves to Baric from Burroughs where he was a sales manager in major accounts.

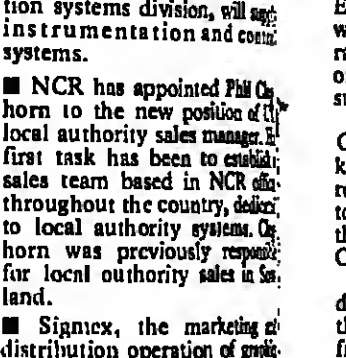

■ BASF UK has appointed Bob Hogarth (above) as manager of its computer division. Previously divisional head of engineering services, he joined BASF 13 years ago after spending five years with IBM.

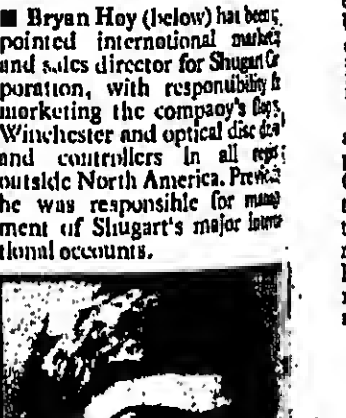

■ Gordon Serpla has joined BA Electronics as franchise manager for the Texas Instruments ranges of integrated circuits and other semiconductor devices distributed by the company. For three years he has been a product marketing engineer with Jernyn Industries.

■ Bryan Hoy (below) has been appointed international marketing and sales director for Shugart Corporation, with responsibility for marketing the company's DSI, Winchester and optical disc drives and controllers in all regions outside North America. Previously he was responsible for management of Shugart's major international accounts.

■ David Thompson is now national sales manager at Anker Data Systems. He worked for ADS in South Africa in 1974 and in the UK until 1979 when he joined Tec as multiple sales manager. He was promoted to Northern regional director 18 months later. Mike Berry has joined ADS as Northern regional sales manager from Tec. He will be responsible for the Leeds, Liverpool and Lincoln branch offices in a sales capacity.

■ Kathy Hansen has been appointed public relations executive for Datacube. Previously she was editor at Hester Communications, a magazine publishing firm based in California.

FOCUS ON SYSTIME

Off with the old, on with the new

After a decade of phenomenal growth, Systime has seen the departure of a co-founder. Guy Meredith looks at how the firm is adapting

WHILE Systime has had its fair share of ups and downs recently, in the OEM market it is a company that still sits squarely in the middle.

Not only is it one of Digital Equipment's OEMs — its success was built around the PDP-11 range — but it also has a large list of its own OEMs, to which it supplies systems.

But enough of this confusing, OEM, which sales and marketing director Mike Bricliffe reckons can only confound customers. "You go to and say: 'I'm the manufacturer and he's the OEM. Eh?'"

He prefers the phrase, Independent Sales Organisation, or just third party supplier — though from force of habit he still comes out with the old usage.

Systime's own 50 regular third party suppliers are often young companies which have come to Systime because of its experience with DEC and because it is a fairly young company itself.

"Sometimes large manufacturers have forgotten what it's like to be on the sticky end," says Bricliffe. "One reason OEMs like us is that we haven't forgotten what it's like to be one."

Systime is just over 10 years old and was founded by ex-Digital employee and blunt Northerner John Gow. But in a Geoff Boycott situation in reverse Gow recently quit the Leeds-based company to be replaced as managing director by Rod Atwood, an ex-Texas Instruments managing director who is

But all this activity, with highly expensive software development and support, made Systime what Bricliffe calls "cash hungry". Then a year ago it received a £13 million capital injection, much of it from Control Data in return for a 38% share stake.

Control Data has since been instrumental in guiding Systime in its big league role, in putting Atwood in charge and preparing the company for a cash-producing public flotation in about two years time.

During this past decade, the third party supplier market has been changing. "It used to be just a question of price," says Bricliffe. "If you could produce a required system cheaper than the man who made it, you were away."

"But now," he adds, "the market is much more dependent on service, support and joint marketing with the manufacturer. If you're building a business, what you need is reliability and availability of expertise."

Systime goes very much hand in hand with its own third party suppliers to the extent of joint marketing and advertising, and this is an important reason why they come to Systime if they're after a PDP or Vax-based system when they could go direct to DEC.

Intel (formerly BL Systems) is one such company, a systems house which until recently supplied the remainder of the Leyland group and is now expanding outwards to the market at large.

"Intel buys from DEC, but it also comes to us for a whole set of reasons allied to flexibility," says Bricliffe. Flexibility of configurations is one reason. "We're a lot more accessible in some areas. We react to market changes. Also, field service is an important facet — and we have very strong field service."

These third party suppliers have often found niches that won't bring them into direct conflict with Systime. Technology for Business (which used to be Logabax) is buying S-series machines and marketing them under its own label, soliciting together with applications software jointly developed and owned with Systime.

With the Systime salesforce arranged by market specialisation, Bricliffe has a clear idea of how to avoid conflict of interest with his third party suppliers, others of which operate in the publishing, advertising and insurance fields. However, while specialised software of this sort is not in his salesforce's "first portfolio", it would sell it if it saw the opportunity.

Marketing to third party suppliers, as distinct from end users, accounts for about 30% of Systime's business but with Digital being less than flexible over the reassigning of operating software licences, "the small dealer look like the best way to expand that figure." The S-series is attractive, Bricliffe says, "because it gives them an opportunity to get a software project going. We're driving at the low end of the market because service is the key."

Bricliffe thought he would miss the old entrepreneurial Systime that disappeared with John Gow, but has found that not to be the case, and is clearly an admirer of the Atwood, American-style approach which has nevertheless retained the local "no airs and graces" aura.

"We're becoming more professional in the act of managing the

company. When John Parkinson and Gow were here it was very exciting but very much their style of management. Now there are 10 of us concerned with the running of the company."

Control Data has introduced American procedures, such as strict cost control. "We used to fly a number of things by the seat of our pants," says Bricliffe, "and now we don't. You can't hope to base your company on the thoughts and decisions of a couple of people. Structured management is what we're aiming towards. This guy (Atwood) listens to all. Then when the decision's made, that's the decision. In previous times companies of our kind have been

through a stage when decisions couldn't even be made."

In the future, Systime will add to its applications portfolio but doubtless undertake less applications development itself since at £500,000 a time applications packages of 100-200 programs come expensive to develop in-house and easier to acquire ready-made.

Support can also be economically farmed out, particularly to a group of small companies called Systime Associates, some of which are run by ex-employees — although about 10 big selling, "first portfolio" packages will continue to be supported in-house.

Guy Meredith is a freelance journalist.

COMPANY PROFILE

"The only computer company that can count to one hundred" — that is the advertising slogan NCR, the US computer giant, is currently using to promote this year's centenary of the company's foundation.

In an industry that appears to be dominated by "young" companies soaring spectacularly into view above the Silicon Valley skyline — and that has seen more than its fair share of business failures in recent months

— the fact that any company has managed to survive so long is certainly worthy of comment. But with NCR there is rather more to it than a mere facility for survival. Look closely and you

will see that its history over the last century epitomises the American Dream, and all that that entails.

NCR had humble beginnings, starting life in 1884 when a former farm boy, graduate of Dart-

mouth College, cashed booth attendant at owner of a local business, John H. Patterson, purchased controlling interest in failing cash register company. Charles Christie charts what happened.

Great ideas prepare way for one-hundred-year innings

FRIENDS of John Patterson among the Dayton, Ohio, business community regarded his involvement in 1884 with the Ritty Incomparable Cashier as something of a joke.

Patterson, however, had faith in the product — a self-adding wheel cash register. Pausing only to change the company's name to the National Cash Register Company, he soon started introducing improvements to the Ritty machine as well as recruiting a salesforce to sell it.

The rest, as the saying goes, is history.

From a staff of 13 in 1884 based in one office in Dayton, selling a total of 359 units, the company jumped within 10 years to employing 1,200 people, who turned over 18,000 units a year. The year 1896 saw the sale of the 100,000th unit, 1906 the 500,000th, and 1911 the one millionth, setting a pattern for growth which continues through to the present day.

This growth in sales, incidentally, was mirrored as well as geographic. NCR was one of the first of the US giants to appreciate the benefits of an international sales network. The company's first international agent, appointed in 1885, was an Englishman, J. W. Atkinson, who was based in Liverpool.

By the late 1880s NCR had agents in Eastern and Southern Europe, the Middle East, South America and Australia, and was shipping up orders selling to the Japanese and Imperial Chinese.

One vital factor (or "great idea") to use the term favoured by NCR management) of NCR's continuing success has been a continuous programme of product innovation to meet the needs of different customers. An ability to handle foreign currencies, to issue paper receipts, to monitor more and more totalisator, the harnessing of electric motor power — these were all developments that kept NCR ahead of its rivals.

The developments reached a peak in 1921 with the launch of the "mother of machines", the Class 2000, a model combining cash register and accounting machine. Principles which was to remain in almost continuous production until 1973.

Another breakthrough came in 1925 with the introduction of the Class 3000, a hybrid machine with the capability to add a narrative description. It is claimed to have been the first commercial model to incorporate the principles of Charles Babbage, the "father of modern computing concepts" for rapid calculation and the printout of complex mathematical tables.

On and on the innovations and technological breakthroughs continued, right through into the age of computers. Indeed it is a tradition that is still continued to this day. For example, between 1978 and 1982 spending on research and development at NCR grew at an average of 16% a year and last year amounted to over \$250 million.

A second and perhaps slightly more controversial factor contributing towards NCR's success has been "employee welfare", although "employee welfare" might nowadays be more

PATTERSON... Ordered new factory after working on the old, gloomy factory floor.

suitable term.

The story — which may or may not be apocryphal — is that in 1894 an unusually large consignment of cash registers had been rejected by overseas customers as "defective". John Patterson, then at the head of the company, ordered his desk to be moved on to the factory floor so that he could find out what working conditions were really like.

After working in that gloomy environment he ordered the construction of a new factory building "with as much glass as was structurally possible" to admit light and fresh air.

So began the second "great idea" at NCR.

In the years that followed, showers, bathrooms, canteens, sewing hot lunches, social and professional clubs, and health care schemes were all added to the range of extras from which NCR employees could freely benefit. Nowadays most of these are taken for granted and are duplicated by many large corporations, but in the late 19th century Patterson's innovations were a radical departure from normal management practices.

Having a good product and a contented workforce to manufacture it bode well for a company, but if a business is to be a success there must also be someone to sell it. It is here that NCR's third "great idea" comes into play, the vital invention of the modern salesman.

Back in the American mid-West in the 1880s salesmen tended to have a rather low reputation with the public. But in the *Saturday Evening Post* of 1890 an article about NCR a few years ago, Patterson changed the image of the whisky-drinking salesman. In-

Sometimes they verged on pure corn. NCR was displaying signs bearing the message "Think" to "inspire employees to be innovative" back in the 1890s — a ploy which other companies, including IBM, were to follow in later years. And sometimes they were benevolent, with outstanding salesmen rewarded for their efforts with special prizes, holidays abroad, and so on.

There were faults: at this time Patterson, who idolised Napoleon Bonaparte, regarding him as a "democratic dictator", used to ride around NCR property on his horse, Spinner, dictating orders to a corps of management executives trailing in his wake. Nevertheless, NCR proved to be an excellent training ground in modern management methods and sales techniques.

One incidental result was that when any of these personnel either left the company or, as happened more often, was fired for threatening Patterson's authority, the training went with him.

So well were the staff trained in the methods of running a successful business that between 1910 and 1930 an estimated one-sixth of the top management in major US companies were former NCR executives, including Thomas J. Watson, who was later to become the president of IBM.

NCR's fourth "great idea" was its aggressive way of dealing with the competition. Advertising was one tactic employing, once again, methods which in the 19th century were a novelty, but have since become commonplace. Thus, a magazine called *Hustler* containing a reply-paid card was mailed out in hundreds of thousands to potential customers. Direct mail was used to back-up the efforts of local salesmen, and travelling advertisements were attached to the sides of horse-drawn wagons.

Sometimes Patterson's methods were unusually harsh. For example, a salesman who had not memorised the "NCR Primer" on sales techniques risked being fired.

Sometimes whimsically Patterson termed these methods "Quaker guns", as they were "peaceful weapons for combating the competition".

Another Quaker gun was patents infringement litigation, used to devastating effect by NCR to decimate the opposition. An NCR in-house journal described it as "warfare of the most aggressive kind". And it certainly was, for between 1884 and 1897, the number of companies competing in the US cash register market declined from 84 to just four.

By the early years of this century many people regarded Patterson as having got a little too big for his boots. His attitude is neatly characterised by one incident: it was discovered that NCR had unwittingly appointed two more directors to its board than Ohio State legislation would allow.

Unlike some of its now defunct competitors, NCR had not been burying its corporate head in the sand

The board concluded that two of its directors would have to go. Patterson's reaction, however, was: "Don't change the directors. Change the law" — a suggestion with which the local attorney-general was only too happy to comply. Such a situation could not go on for ever and in 1912 NCR found itself embroiled in anti-trust litigation, stemming from the Sherman Act, which for a time seriously endangered the company's future.

Workers at NCR have seen the factory floor change from a gloomy and high-ceilinged work-

Patterson and 21 other company officers lost the first round in court and were fined and sentenced to imprisonment. Various counts of restraint of trade and unlawful monopoly. He was eventually heard in 1915, reversed the decision of the court and so removed the threat to the company.

Patterson died in 1922. The company successfully weathered the trading slump of the 1920s and salesmen continued to meet their targets and attending the conventions. More and more models were introduced. Employees continued attending company-sponsored garden parties, swimming, golf, and the 15 2000 machine kept rolling off production line.

The story of the National Cash Register Company, however, is not story in the early 1970s with shipping of the last of the Class 2000s, and the notching up of sale of the company's 10 millionth machine.

Unlike some of its now defunct competitors, NCR had not been burying its corporate head in the sand during the previous decades with the computer age dawning.

As long as 1938 NCR established a special research department to study the possibilities of vacuum tubes and relay business machines. By the 1940s it was working with magnetic memory drums.

In 1956 it unveiled its first commercially available electronic machine, the Post-Tronic, which used magnetic ledger cards for automatic verification of postage counts in the banking business.

In 1960 came the launch of the NCR 390, the company's first low-cost, mass-marketed computer. Then came punched card sorters, optical scanners, real-time access memories, the high-speed Century series of computers, MOS/LSI circuitry for terminals.

COMPANY PROFILE

NCR century grows out of great ideas

From page 18

Finally in 1974, "to reflect the new direction" in which the company was heading, the organisation was given a new name — the NCR Corporation.

A perfect transition from the age of electromechanical cash registers to the era of electronic technology? Well, almost.

As one senior NCR official puts it: "We nearly screwed up the shift from our traditional operations into the computer market. For the first half of the 1970s the company was definitely in a survival mode."

One of the consequences of this traumatic period was that the company was forced to rethink totally its manufacturing and marketing strategies. Diversifications into other areas of business were abandoned. New technologies were bought-in through the acquisition

unique position to handle these developments. We are already managing EFT networks in the US for banking customers and I envisage similar developments in this country shortly.

"After all, why should ATMs be limited simply to being stuck on the outside walls of banks? We will be seeing them in remote installations next, on housing estates where people live, and in factories where they work."

Rather ironically then, the old National Cash Register Company is now at the forefront of moves to create a cashless society.

Another area into which NCR is already starting to move with increasing confidence is office automation, a move in which its workhorse personal computer, the DecisionMate V plays an important part. It is likely to be joined soon by some sort of word processing system.

NCR has some definite ideas on how this is to be achieved. Says Newall: "In the past the office automation process has tended to be rather fragmented, with separate departments in a company all purchasing different personal computers and word processors. What is now needed are industry standards to bring all these systems into line."

"We think we have that capability through our Unix-based Tower system, our distributed processing capabilities and our networking facilities."

Newall, incidentally, believes that Unix awareness is probably greater in the UK than in the US.

So rather ironically as it begins its second century, the company that more-or-less invented the modern-day salesforce, with all its incentives, is now having to move away from these methods in favour of different approaches.

Reflecting this change of emphasis, NCR is also breaking away from its Monolithic approach to total vertical integration in the products.

The company is half way through a programme of replacing every major product line with a new generation of systems

of companies like Quantar in the microfiche field, Comten in data communications, and Applied Digital Data Systems in VDU terminals.

Then there was the process of "commercialisation". This means that the different manufacturing units within the NCR empire must now submit competitive quotes if they want to win a contract to produce a particular component for a new machine. Thus, if an outside company can put in a better price for, say, the supply of a disc drive system, it will be awarded the contract — not the NCR subsidiary as had previously automatically been the case.

According to Fred Newall, who recently took over as chairman and managing director of NCR UK: "The experiences of the 1970s taught the company a lot of valuable lessons, with the result that not only are we now once more moving forward, but are in a far stronger position to meet the challenges of the 1980s than some of the more traditional mainframe manufacturers, such as IBM and the Bunch."

So just which way will NCR be heading in the 1980s as it enters its second century?

NCR's traditional strength has always been the retail/financial market — a strength reinforced during the 1960s and 1970s with the introduction of its various automated systems for banks and supermarket points of sale (PoS). In the years to come this is likely to continue to be one of the company's main breadwinners, but with perhaps even greater sophistication and integration.

Newall sees the increasing development of networks in banking, and retail, worldwide, with bank, automated teller machines (ATMs) and electronic fund transfer in shops (EFTPoS) as being the direction in which the market is likely to move.

But it is not a challenge that worries him. "NCR's special knowledge of banking and retail systems," he says, "puts us in a

position to handle these developments. As well as the change to "commercialisation", it is working increasingly in partnership with outside specialist software houses on the development of products for specific markets.

It is not all change, however, at NCR. Production of mainframe and comprehensive minicomputer systems aimed at vertical markets is planned to continue well into the future. Vast budgets are still spent internally on R&D, not just on new product lines but also on ways of improving the company's existing range of over 250 different products.

The company is half way through a programme of replacing every major product line with a new generation of systems. It is confident its 32-bit VLSI microprocessor will take off and, in the PoS field, the company is

currently working on self-service airline ticket and petrol station systems.

Newall's view is that the company is now "financially in excellent shape and well placed to meet the challenge of the future". While in the US his ultimate boss, Charles Esley, the corporation president, appears to be in an even more optimistic frame of mind.

At a recent presentation to the New York Society of Security Analysts Esley said: "While many accomplishments of past years will be commemorated in 1984, the excitement comes from the challenges and opportunities we are presented with today. This includes working to achieve our objective of becoming a brilliantly successful company."

Fine words which, despite the changing role of salesmen in the NCR empire and the move away from "cash" to a "cashless" society, the company's founder, John Patterson, would surely have appreciated.

NEWALL... "The experiences of the 1970s taught the company a lot of valuable lessons."

Country Computers — The Inside Story

The C3000 series microcomputer, including 20MB Winchester disc drive, plus FREE Qume VDU.

The C3000 from CCL means reliability and flexibility in a highly cost effective microcomputer package. You also get top performance. The C3000 is one of the fastest systems in the world — including 16-bit types for some applications.

Featuring only five major components, the system is based on the proven Z80A microprocessor, running CP/M. So you have over 6,000 different applications packages to choose from.

To further underline the system's flexibility, it is easily upgraded to network status. In this form, like CCL's C3005, it can communicate via CP/NET with up to 16 users.

Currently over 1000 C3000 systems are in use worldwide. Backed by a 46-strong dealer network for the UK, our major customers include British Telecom, the Ministry of Defence, the BBC and BASF.

The C3000 is available from less than £3000, with a FREE Qume VDU. CCL — when it comes in value, we've got a great deal to offer.

COMPANY PROFILE

NCR may be celebrating its 100th year, but it has only been a computer company for 30 of them. In 1953, it entered the computer market with the purchase of the Computer Research Corpora-

tion and five years later launched its first system, the 304.

Today, its mainframe range is split into two series - the medium to large V series offering up to four Mbytes of main

store and the I series minicomputers headed by the 19050 launched last year.

1983 also saw the introduction of NCR's Unix-based Tower 1632 and the CP/M and MS-

DOS Decision Mate V, the company's attempt to move away from the traditional mainframe/minicomputer.

This looks to be the familiar story of a mainframe maker jumping on

the micro bandwagon but the NCR approach aims to put control of new systems square with the user rather than the DP department, as Paul Walton and Andrew Thomas.

Unix is set to be the future mainstay

THE instigator of NCR's new direction has been company president Charles E. Exley Jr, who formed the five-man office of the chief executive last April. Its task was to develop new products based on the Unix operating system.

"We want to devote our development resources to doing things which have not already been done by someone else," commented Exley at the time.

"Our technology strategy is allowing us to focus better our development efforts on those areas where we will receive the highest return for our investment."

The company's new approach centres around two major decisions. First, Unix is set to be the NCR operating system of the future, right across its product range. The ageing VRX operating system, a batch-oriented product with its roots in the late 1960s, will be run as a subject program under Unix, enabling users to run their existing software without modification whilst developing new applications with Unix.

Second, Migration Path Engineering has been set on the road. This is the title given to the plan to enable users to add new hardware to their systems on a plug-in and switch-on basis without changing applications or systems software.

NCR's \$75 million order last December, giving it over 50% of the Norwegian banking market at a stroke, appears to be a vindication of the new strategy.

Fellesdata Data Centre, which handles the business of 190 banks throughout Norway, plumped for 600 5080 automatic teller machines (ATMs), 1,700 Tower 1632s, 3,000 Decision Mate V personal computers, 4,500 Series 500 financial terminals and 2,500 Worksave word processors.

Product marketing director Graham Miller outlines a mixture of old and new products with which NCR is "committed to becoming the leading office automation supplier by the mid 1980s". Following a reorganisation of the product marketing division, Miller now has all four computer product

POIL... "We're getting phenomenal meantime between failures with the 9300 - over 8,000 hours non-stop!"

managers reporting to him.

Top of the list comes a new family of V series mainframes, named Instant Ready, which offers non-stop processing similar to Tandem, and features a loose-coupled architecture. It will compete with the IBM 43XX.

Harry Thornhill, marketing manager for the V series, reckons that although the market is still sluggish, the UK mainframe population will still double in the next three years. NCR aims to be in there fighting with Instant Ready, which employs the company's new 32 bit chip set, first used in the 9300 mini last year, to give fail-safe processing.

Hardware elements are duplicated to prevent the system from crashing due to component failure. Increased levels of redundancy do not come cheap, so NCR is offering various levels of performance - up to 100% - as well as different-sized machines.

Instant Ready machines will start at around the 0.55mip level, eventually filling the gap between IBM's 4331 and 43XX, says Thornhill. The V series is moving towards becoming a distributed mainframe through operating system changes.

"We're moving away from tight coupling VRX," says Thornhill, "to putting a full copy of it in each processor. A mainframe system can then become a series of distributed processors running out along a common bus."

"This frees you to add processing power incrementally when and where you need it along the bus. Instant Ready could bridge the gap between VRX and the coming industry standards such as Unix. We could run VRX and Unix side by side on the same processor if we wanted to."

The ability to bolt on new bits of mainframe as will, coupled with the adoption of Unix, allows NCR to integrate them into a system which includes mainframe and minicomputer. There is a 32-bit Unix version of the Decision Mate V on the way.

IBM compatibility is offered through SN/A and peripheral interfaces to everything else through the S/A interface systems in

"It won't be noticeably cheaper, we're selling very much better performance," says Thornhill, who is reticent about putting any dates or prices on the system changes other than to say that NCR is working flat out to get them ready.

"If we can show that we offer IBM users more efficiency with Comten and ADDS products, we help not only ourselves, but the rest of NCR's product line too," says Toylor.

The company's plans for the I series mini revolve around NCR's bus architecture in which upgrades are simply effected by plugging in extra hardware.

And Unix again appears on the scene. Although "I" series marketing manager Tony Pui says that many users are perfectly happy with the ITX operating system, Unix will be offered as a separate but parallel product line.

"The 9300 was the first mini to use a full 32 bit chip set," claims Pui. "Having begun with a two Mbyte CPU and common board, there is a lot we can do to diversify the product."

So we can expect to see smaller and larger, slower and faster I series products soon. Having begun life as a low end DEC Vax or IBM System 34 and System 36 competitor, the power and capacity of the 9300 is scheduled to keep rising throughout this year and next.

In fact, NCR has four machines which could be described as minis. The Tower 1632 is its 68000-based machine, running 16 and 32 bit software, and the Decision Mate V personal computer is destined to gain 32 bit capability soon.

NCR has also taken an option on the latest Convergent Technologies NGEN, and an earlier 8086-based product from the same stable forms the basis for the Worksave word processor and office automation workstation.

Poi stresses the compatibility of NCR's mini range. "A customer which bought NCR minis in the seventies, or Marks & Spencer's, which bought 500 last year, will be able to run the same programs unchanged," he says.

The main differences are that the messaging between failures (MTBF) has increased and you now have the chance to bring up Unix systems in parallel.

"We're getting phenomenal meantime between failures with the 9300 - over 8,000 hours non-stop!"

This will bring down maintenance costs and make the 31K supermini reliable enough to become an office machine.

Office automation manager Tony Lazzarini stresses the importance of Unix to NCR's product line.

"Unix," he says, "provides the key connectivity and standardisation in any office. We think the office automation is about standards and connectivity, and Unix as the operating system in the short term, Ethernet as the local network."

"Together, these systems create

the office or more precisely, the departmental computing environment."

This year, NCR is due to launch more hardware than in any of the previous 99 in business, and a lot more software to go with it. Thornhill cites the example of the terminal application programming system (Taps), acquired from firm Informatics.

"It's a fourth generation development tool for both the 9300 and Instant Ready machines," says Thornhill. "What we are saying is that we want to help DP professionals to get rid of bottlenecks, to get out of the DP room and offer more services to their users."

"It's not being done with conventional computer systems, you have to innovate."

Migration Path Engineering is now definitely on the road

the office or more precisely, the departmental computing environment."

This year, NCR is due to launch more hardware than in any of the previous 99 in business, and a lot more software to go with it.

Thornhill cites the example of the terminal application programming system (Taps), acquired from firm Informatics.

"It's a fourth generation development tool for both the 9300 and Instant Ready machines," says Thornhill. "What we are saying is that we want to help DP professionals to get rid of bottlenecks, to get out of the DP room and offer more services to their users."

"It's not being done with conventional computer systems, you have to innovate."

COMPANY PROFILE

The computer industry has seen many software houses fall by the wayside because they tagged on to hardware makers who themselves went under. That's why choosing the right company is so important.

NCR operating soft-

ware falls into three categories: "I" (interactive); "V" (virtual); and "portable". "I" software spans the range of NCR interactive minis.

One software house which is right behind the NCR products is Eastman-Stuart, whose

managing director is Geoff Rump.

Kevin Townsend went along to this thriving company to see exactly why they sing the praises of NCR, and in what ways the hardware makers are different from the rest.

Clothes suppliers have been NCR users from early days (above) to firms like Snowman today.

Ins and outs of the software plan

THE main advantage of "I" software is its compatibility. Programs designed for the smallest available system will also run, without the need for recompilation, on the largest system.

There is an inherent simplicity to the operating system which lends itself to ease of installation, system reliability, and easy migration from one processor to another. The trade-off is that the VRX operating system is basically a 1960s batch system, sadly lacking in the sophisticated facilities offered by the competition.

The "V" software turns on NCR's virtual mainframe range, under the Virtual Resource Executive (VRX). "It is quite difficult," says NCR's Mike Wormald, "to see exactly where the 'I' philosophy ends at the higher end of the minicomputer range, and the 'V' philosophy begins at the lower end of the mainframe range."

Perhaps the best definition is by application: the "I" range belongs to the distributed philosophy with devolved processing, while the "V" range belongs to the traditional mainframe concept.

The "portable" software belongs to NCR's latest offerings, with CP/M and MS-DOS on the DecisionMate V (DMV), and Unix on the Tower 1632.

"Our initial experience," says Geoff Rump, managing director of software house Eastman-Stuart, "is that NCR has produced reliable, well documented and efficient implementation of these industry standard products; and has enhanced the operating systems with a number of its own useful utilities. One, for example, allows the user to take a disc from another manufacturer's computer, and enables it to be read by the DecisionMate."

Eastman-Stuart claims to be the leading supplier of third party software to NCR and NCR users in the UK.

"We supply," explains Bill Morgan, the company's marketing manager, "both package and bespoke software, with all the related services for the complete NCR product range. But we specialise in the interactive systems area, since this represents the greater part of the existing and potential NCR user base."

The company also provides a specialised consultancy service for the computer industry in general, but this is particularly aimed at allowing NCR users to compare proposed NCR upgrades with alternative manufacturers' offerings. Eastman-Stuart is also a distributor for the NCR 19000 range of minicomputers, and dealer for the DecisionMate V microcomputer and the Tower 1632 Unix system.

The company recognises two other operational relationships with NCR: sub-contractor, and side-by-side operator. Eastman-Stuart is a major sub-contractor to NCR for its internal-use software; for package software to sell and, to a decreasing extent, for bespoke software to end-users.

Most of this last category now goes directly to Eastman-Stuart and other leading NCR software houses.

the software company will propose a software solution to a prospective customer alongside NCR's proposal for the hardware. "But before a software house can supply software to NCR as a sub-contractor, or to a user in a side-by-side capacity," comments Rump, "it is necessary to become an Accredited Software House. NCR has a rigorous selection followed by a continuous monitoring procedure on technical and financial performance to maintain the standards of and confidence in the software house. And NCR is a very demanding company!"

It was, according to Eastman-Stuart, some years ago that NCR realised it would need to encourage third party software, and that third

party supply is essential if hardware growth is not to be inhibited by restrictive software.

Morgan describes his major software products like this: "We provide selective application packages, concentrating on areas where we have an existing expertise of the commercial problem itself. ITAS is one such example. It is an interactive transport accounting system that covers all the relevant operational requirements and then interfaces to accounting systems wherever appropriate."

One of the customers for ITAS is Forwardair, which runs the system on twin NCR I Series computers first installed in June 1983. Forwardair was the first large air freight company to adopt the system, and Don Cameron, Forwardair managing director, explains why he chose ITAS: "We carried out a management survey on all computers and computer packages currently on the market."

"After considerable research we opted for NCR and Eastman-Stuart as providing the best complete package available; but we were also impressed by Eastman-Stuart's understanding of the air freight business, and we expect their knowledge to help us keep the system running quickly and smoothly."

One immediate benefit acknowledged by Forwardair is the ability to interface to its existing accounting machine in Scotland, completed with a improved ac-

COMPANY PROFILE

If NCR is just one of the Bunch when it comes to mainframes, the oldest computer company of them all has a significant lead over the rest of the field in one important area, writes Andrew Thomas.

That area is retail and financial systems, and NCR's traditional strength there stems from a 100-year-long involvement with shopkeepers and bankers.

The company's pro-

duct line covers everything from simple electronic cash registers to sophisticated point of sale electronic funds transfer systems (EFT-PoS) which put computer power at the disposal of the shop cashier and

the customer. Such installations can obtain clearance for a credit card transaction from half way round the world in five seconds. In banking, NCR has 51.5% of the UK market with over 3,000 auto-

matic teller machines (ATMs) installed in order out of a total of just under 6,000. The second place is 36%. Each ATM handles an average of over 1,000 transactions a day.

Cut costs and reduce fraud

LAST year, NCR's financial and retail systems accounted for \$870 million, or 42% of total revenue.

"NCR's background is in retailing," says John Burns, head of retail marketing. "It's where we grew from and we've always looked on it as the background of the company."

NCR installed the world's first EFT-PoS system 10 years ago in a British department store. Hovvys of Chester had branches in Bangor, Exeter and Gloucester and in a joint project with Barclays Bank and NCR installed PoS terminals to automate Barclaycard transactions.

Details of the credit card purchase were collected on an NCR machine in the stores which produced a tape for processing at Barclaycard's Northampton data centre.

Burns was pleased as it was no longer necessary to sort and total the credit card vouchers at close of business each day; the customer was pleased because his purchase was completed more quickly; and Barclays was pleased because no data preparation was required to enter data from the vouchers.

A typical cash purchase takes between 30 and 34 seconds, while a cheque can account for up to 90 seconds. EFT transactions can be completed in seven seconds - and create no paperwork for the retailer.

Mike Gillespie, manager of EFT systems for NCR in the UK, explains the benefits to the retailer: "Not only are you relieved of the risk of losing the vouchers which carry the actual values of the transactions; you don't have to spend hours in the back office sorting them out. And when you consider that at Christmas stores typically do 10 times the normal business, that's some saving."

With the elimination of the paperwork associated with credit card purchases, Gillespie believes that costs to the consumer could be held down, or even reduced.

"EFT saves the credit card companies money. No data prep is needed and fraud is reduced. The

retailer is in a good position to re-negotiate terms with the card issuers. If the banks don't pass on the benefits to the other parties involved, there's no incentive to carry on with the systems.

Cash withdrawals from ATMs incur 50% less bank charges than do cheques, so EFT transactions should also cost half as much," he says.

Gillespie illustrates what can be done with EFT by citing the example of the Iowa Transfer System in the US. Development of the systems started in early 1974 and over 200 banks now issue debit cards (similar to a cash point

The motorist fills up, then puts his credit card into the pump for automatic debiting of his account

card but which can be used in shops as well as ATMs) to 250,000 customers.

The cards can be used in supermarkets in the state of Iowa using NCR 8455 processors linked to PoS terminals incorporating laser scanning - the technique of reading bar-coded information on products at the checkout which removes the need to enter item prices and codes on the cash till.

The supermarkets also have ATMs installed in order that customers can check on the state of their bank accounts before they shop.

Eleven mainframes at eight data centres handle the online transactions from both the supermarkets and almost 500 ATMs. The customers accounts at the 1,000 banks which use the system are automatically debited.

In the UK, one of the largest EFT systems was installed by NCR in the 18 branches of the Army & Navy department store chain, in London and South-east England. The network includes 600 2151 and 2152 PoS terminals linked online to three T8270 processors at the Army & Navy data centre at Chislewick in West London.

The store had operated its own credit account system for some years, and between 1980 and 1982 worked with NCR to develop the system to handle Access, Barclaycard and American Express cards.

Access and Barclaycard transactions are recorded by the cashier entering the card number on the keyboard of the PoS terminal, which is checked against a file of stolen or otherwise undesirable cards held on the machines at Chislewick.

As the credit card companies can input the transaction data directly into their own mainframes, there is no need to produce the usual voucher and the PoS terminal prints a standard Army & Navy bill for the customer.

American Express purchases are handled in a similar way, with an online link to the Amex data centre in Brighton, then onward to the Amex operations centre in Phoenix, Arizona, for a credit authorisation.

The maximum response time for this operation is six seconds; the average transaction taking five. "Because American Express cards are used all over the world," says Gillespie, "it needs one central authorisation service. If you can shop in London and New York on the same day, so can a thief."

Another retail area ripe for the introduction of EFT is the petrol station. There are already pilot schemes in operation in the UK in which the motorist fills up, then

GILLESPIE... "You don't have to spend hours in the back office sorting things out."

puts his credit card into the pump for automatic debiting of his account.

"Within 10 years the vast majority of retailers in the UK will have EFT in most branches," predicts Gillespie. "It will be the exception to find a store not accepting your debit card. We've installed over 100,000 PoS terminals worldwide to date."

Gillespie believes the speed of EFT can be off putting for customers who traditionally pay by cheque when they have insufficient funds in their accounts at the time, in anticipation of their salaries being paid in before the cheque has time to clear.

"It doesn't mean funds will be transferred in real time. The Credit Agricole system in France holds up the transaction for two days before sending them to the banks, so that an EFT purchase takes the same time to clear as a cheque."

And other than customer reticence to accept EFT, retail marketing head Burns also sees the UK banks hanging back from development systems here. "In the US the trend is towards independent EFT networks accepting any credit card. These networks run their own data centres and sell the transactions to the banks, cheaper than the banks could do it themselves."

"The UK banks would like to control EFT, but they can't move fast enough, so it looks as if the same will happen here."

"The banks are not in a position to offer a nationwide service for some years - they're not starting a pilot scheme until 1986 - but the retailers want it now."

While EFT has still to take off in the UK, the ATM market has almost reached saturation point, according to Roy Burton, manager of financial terminal systems.

"In-branch ATMs are the machines which are becoming more widespread. We could produce a totally-automated bank as far as cash handling goes, but you can't replace all the humans with machines."

"The first generation of through-the-wall machines was the simple £10 cash dispenser," continues Burton. "IBM was first with what you'd call an ATM when it launched the 2584 around 1972. Our first machine, the 770, appeared in 1975."

"It was very large, having been designed for the US market where they like things big. It weighed three tons including a three-inch thick safe. The later 1780 was designed specifically for the UK banks and was much smaller, more flexible regarding software, and only half the bulk."

"One US bank builds its own, bigger fascia for the new 5080 model because it thinks the standard one is too small. The IBM and Burroughs ATMs are much bigger than ours too; British banks often have problems installing the larger machines because the buildings are usually quite old and the floor heights inside mean that a big ATM - and there's a lot more to them than the front would suggest - would have to be mounted in a way that would be impossible for the wall on the street side."

NCR's ATMs hold up to £30,000 in cash (more in some cur-

rencies) depending on the location of the notes. The past has proved temporary crooks.

A robbery took place in a where the entire three-ton machine was ripped out of the wall taken away. "But it wasn't ours," says Burton.

"The UK banks would like to control EFT, but they can't move fast enough"

BURTON... "Can't move fast enough"

COMPANY PROFILE

Times change, and so too do computer manufacturers' product lines. In common with the majority of its contemporaries in the computer business, NCR has been radically changing its product portfolio, and

taking the small business microcomputer close to its corporate heart.

Such changes bring with them an inevitable and commensurable change in the overall profile of the NCR user. To the traditional pat-

tern of mainframe and minicomputer users has now been added that unknown quantity, the small business person.

This is producing the one potential ripple in an otherwise calm and placid pond of NCR users,

which make up NCUA, the NCR Computer User Association.

Ken Staple is the chairman of the NCUA, and vice principal of a major NCR user, the De Havilland College in Boreham Wood. He re-

cently acquired 30 NCR Decision Mate microcomputers, so he is also aware of the need for the association to gird itself to meet the challenge of the new machines. Here he talks to Martin Banks.

Users meet with the future

THE challenge of new machines is one that the NCR Computer Users Association is not facing alone.

"One of our big problems at the moment - one that most user associations are facing - is how to move forward to meet the future," says chairman Ken Staple. "We are facing a strategic planning decision over the new machines, especially the Decision Mate."

That decision is going to involve a certain amount of restructuring within the NCUA, in spirit if not in reality, so that the new users can be accommodated in ways that are meaningful to them.

That restructuring will predominantly take the form of adding to the association's existing activities, rather than chasing them. These will then provide what Staple calls the central strength around which other activities can operate independently.

Those existing activities are based around quarterly general meetings of the 240 Association members. At these meetings there is the chance to air the apparently minimal number of grievances and to demonstrate and discuss new products, or new releases of old products.

The meetings are also open to third party companies. Staple

illustrates: "At a recent meeting we had a presentation from an American company, Century Associates, of a new software product called Office Ware. This is a Lisa-like package that incorporates windowing facilities. As such it has nothing to do with NCR at all."

The NCUA is open to membership from any user operating an NCR software driven machine, and in the past that has led to a very well-ordered structure to the association. With the arrival on the scene of not only the Decision Mate, but also the Tower multi-user machine, the NCR user base is set to broaden.

Staple feels that the best way of bringing reasonable order to this changed situation is to allow for a fair degree of "disorder" through the growth and development of local sub-groups. It is an approach the association is already exploring.

"We are just about to start with a special interest group for retailers and distributors," says Staple.

"NCR has always been strong in the retailing business, of course, with its history of making cash registers," he continues, "but now there are completely integrated systems available."

"Even small shop owners can get a till that has quite a large

memory, some processing capabilities, and communications links to mainframe or minicomputers. Such users have special needs within the terms of the user association."

The NCUA has already spun off a couple of other special interest groups in the software field. These are dedicated to the all-important areas of operating systems. There is one group that meets to consider the VRX operating systems, and another that focuses on the I Series user needs.

As the association has made the fundamental move to allow Decision Mate and Tower users to become members of the NCUA it is now facing up to the problem of how to deal with them. "Obviously," Staple says, "users of the Decision Mate and the Tower are going to want other meetings than the four general ones, so we are going to sponsor a special interest group."

What form this group will take has not been decided. Indeed, as the users of the machine are something of an unknown quantity to the NCUA, it will be left to these new members to formulate their own approach within the overall structure of the association.

Staple feels it is essential that

they join the NCUA. "We always encourage all users to join the NCUA," he says. "I feel the users need that central strength to bind everything together."

To help provide this "glue" the association is planning for the first of what it hopes will become an annual two-day jamboree. "This will be the focus event of the year," Staple explains. "Then, with the other general meetings the structure should be flexible to allow it to take different forms."

"Instead of laying down a very definite constitution for the interest group, they will almost form an entity of their own. All they will have to do is adhere to one or two rules designed to help link them together when necessary."

The focus event is scheduled to take place on June 20 and 21 at the Majestic Hotel in Harrogate and will mark the coming together of all the different sections within the growing spectrum of NCR users.

The arrival on the NCR product scene of the Decision Mate, the Tower multi-user system and the 9900 processor potentially puts at risk the company's reputation for its hardware among users.

"The changes at the bottom end of the product range are quite extensive," Staple says, "and the

recent introduction of the new machines means that few users have experience of them."

Staple is at the front end of the experience-gathering process on the new hardware. De Havilland

About the only bone of contention is in the area of software support

College has just taken delivery of the 9300 machine, together with some 30 Decision Mate micros. These are linked together using a DecisionNet networking system, so that each micro can be used as a standalone machine, as part of the

network, or as a terminal.

Just about the only bone of contention that currently exists between users and company is in the area of software support. This is highlighted by another NCR user, Edwin H. Bradley, a Swindon-based building company. DP manager Derek Parkinson says: "We carry out our own software support on our VRX machine, though the software is not as user friendly as it could be. It has been difficult to diagnose faults, locate bugs and correct them."

"NCR's support has been good, but it shouldn't be necessary."

NCR has recently introduced a new central software services support scheme, to which all users are obliged to subscribe. An integral part of this service has been the introduction of a telephone hot line.

While this scheme is of considerable benefit to some users, the larger users, which can solve their own problems, are unhappy about not being able to opt out of the service. Even here, however, the differences between the NCUA and NCR are mild, for users also get a full range of software updates as part of the subscription.

Martin Banks is a freelance journalist.

It could be so much simpler.

On these two pages the standard is discussed by Joan M. Smith, senior consultant, Standards Division, National Computing Centre, in the context of the interchange of documents.

The about-to-be-published ISO 6937 primary and supplementary sets of graphic characters.

Other seemingly composite characters, for example $\frac{1}{2}$ with a bar, $\frac{1}{2}$ with middle dot, $\frac{1}{2}$ with strike, or $\frac{1}{2}$ with mark, have been assigned a single graphic character.

The code table also provides for appropriate punctuation marks including the hyphen, exclamation and question marks and angle quotation marks. There is a variety of signs including those for action and arrow, copyright and registration.

With the intention of there being no reformatting by the receiver, the text stream therefore includes such format effects and other control functions as may be necessary to achieve this. These may specify the size and orientation of a page, the text area of the page, the rendition criteria for the characters themselves, for example font used, its style, the intensity, the size of the character, also line-line spacing.

The primary set of control func-

checking that someone somewhere, has not done you the effort. And if you submit yours for consideration.

Coupled with the above, are provided for registering perititles of graphic documents dealing with ISO/DIS 7350 Text Convention. Registration of Character Sub-repertoire, and International standards.

Return to: The Exhibition Manager, The Computer Trade Show, Reed Exhibitions, Surrey House, 1 Throwley Way, Sutton, Surrey SM1 4QQ.

Wembley Conference Centre, March 13-15 1984
Open 09.30-17.00 daily

In a fast changing market like computers you need to see the very latest hardware and software developments if you're going to be able to offer your customers the most up to date systems.

For keeping up with developments The Computer Trade Show is just the ticket - so to help you attend this exclusive trade only show we have printed the visitor registration form here. Simply fill it in and bring it with you to Wembley Conference Centre when The Computer Trade Show is on from March 13 to 15 and you will be admitted free.

If you want tickets for your colleagues or other bona

The Computer Trade Show '84

vide visitors return the form to Exhibition Manager and tickets will be forwarded to you immediately. Because the show is for the trade only you can expect a warm welcome from all the exhibitors who will be only too eager to discuss trade prices, distribution agreements, licensing agreements and so on. You can see many different suppliers all in one day, and have the kind of discussions which would normally require several formal appointments. You owe it to yourself and your clients to keep up to date so let The Computer Trade Show be your ticket to increased sales.

The Mark 3 Mini-lex from Direct Data Entry.

New light on terminal in a briefcase

A PORTABLE terminal based on Tandy's Model 100 computer has been launched by Direct Data Entry. It is called the Mark 3 Mini-lex.

The company has modified the computer to make it suitable for self-contained business use. It has added a high-capacity power pack and designed new charging circuits to accommodate mains or 12-volt DC input. A 300-baud full duplex acoustic coupler, driven by the same power pack, has also been added. And a meter is provided to show the user the state of the power pack.

The acoustic coupler is designed to accept almost any shape of telephone, including Trimphones.

The equipment is all contained in a robust briefcase weighing 12-lb. An extra touch is a light in the lid to help business people on the road use the machine in telephone boxes.

Direct Data Entry (CW), Dower House, Green Balk Lane, Lepton, Huddersfield HD8 0EW. Tel: (0484) 606090.

Cuts at the touch of a button

THE Fairblade continuous stationery guillotine from Wightman Mountain, priced at less than £2,000, has been designed to cut continuous computer or word processor stationery neatly and cleanly on all four sides.

All unsightly perforations are removed so that letters produced on a word processor in continuous form, for example, become indistinguishable from a letter individually typed on a company's letterhead.

The versatility of the guillotine is such that it can be used to cut almost any form of continuous stationery output up to 15 1/2 in x 16 1/2 in including multi-part sets up to three parts.

The cutting size can be adjusted down to 3 in x 4 in and all adjustments are in 1/16 in increments.

The Fairblade, says Wightman Mountain, takes about two minutes to set up and one sheet only can be cut initially to check that the correct size has been selected. Then, at the touch of a button, the guillotine will automatically cut every successive

The Fairblade guillotine.

sheet correctly and switch itself off when the last sheet has passed through.

It comes complete with its own stand and waste bin and swivel-casters enable it to be moved from one location to another.

Wightman Mountain (CW), 142 Vauxhall Street, London SE11 5RH. Tel: 01-582 6522.

The PT881 which runs at 150 characters a second.

Printer of character

THE Siemens PT881 ink-jet printer has been adapted to reproduce all the characters produced by the IBM Personal Computer. The work was done by UK printer and terminal distributor Riva (Terminals), which is also a Personal Computer dealer.

The PT881 costs £595. It runs at 150 characters a second and ink-jet printing ensures quiet operation. The ink cartridge prints five million characters, and a signal

tells the operator when the ink is getting low.

Both friction and tractor paper feeds are standard. The printer can handle roll and fan-fold paper and single sheets.

Riva is aiming the product at both dealers and users.

Riva Terminals (CW), 9 Woking Business Park, Albert Drive, Woking, Surrey. Tel: (04862) 71001.

Floppy will triple 5 1/4 in capacity

MPI Europe has announced a new 5 1/4 in floppy disc drive which, it says, provides triple the capacity of current 96 tracks-per-inch (tpi) drives.

Called the MegaDrive, the Model 1722 employs 170 tpi track packing density to realise an unfurled capacity of 3.2 Mbytes on a 5 1/4 in diskette.

The Model 1722 has a standard 5 1/4 in footprint and is plug-compatible with current 8 in floppy controllers with an SA 850 interface. This means it can be used with existing hardware and the enhanced capacity suits it to program loading and Winchester back-up applications.

A further bonus, says MPI, is that the Model 1722 is capable of reading standard format 48 and 96 tpi diskettes.

Evaluation units are available for volume OEM customers and priced at \$500.

MPI Europe (CW), 11a Reading Road, Pangbourne, Berks RG8 7LR. Tel: (07357) 4711.

The TM120 which consists of keyboard, telephone and printer in one unit.

Systems with built-in telephone

AN electronic mail terminal with a built-in telephone and costing £635 is now offered by BCD Telemail.

The TM120 consists of a keyboard, a telephone and a printer, plus a built-in modem, in one unit.

As a terminal the device can access the telex network and electronic mail services. The printer can be switched between 40-column, 60-column and 80-column lines.

The telephone part of the terminal

can store 10 numbers for short-code automatic dialling and provide recall of the last number called.

BCD Telemail (CW), Durgates House, Wadhurst, East Sussex TN5 6DF. Tel: (0892) 883755.

Colour graphics subsystem introduced

A COLOUR graphics subsystem for interactive, real time applications has been introduced by the Swiss company, Graphic Data Products.

The GDP-500 is basically an intelligent vector graphics system with an eight-colour raster display. Image generation and transformation are performed on coded vector data stored in a display list. The image can be partitioned in individually addressable segments. Images can be created in a virtual co-ordinate space of 4096x4096 points, with a real zoom facility to display the entire picture or a defined window on the 512x512 raster screen.

The GDP-500 is available with a 14in (33cm) or 20in (50cm) high resolution, flickerfree CRT.

A graphic tablet, mouse, plotter or hardcopy device can be connected through an intelligent peripheral interface, and an arithmetic processor accelerates complex transformations such as scaling

The colour graphics system from Graphic Data Products

and rotation.

The GDP-500 is accompanied by a Fortran IV graphic software package which enables the user to call a broad spectrum of graphic functions built into the terminal.

The GDP-500 is aimed at interactive, real time engineering applications such as CAD, layout design, schematics, simulation and network monitoring. Specific modifications for

system designers can be made on request. Graphic Data Products (CW), Columbia House, 69 Aldwych, London WC2B 4DY. Tel: 01-242 9267.

Disc system gives 20Mb online storage

NEW from the Micro Technology Group is the Honeycomb cartridge disc storage system for the IBM Personal Computer or XT.

Designed to match the PC's styling, the UK-developed Honeycomb gives 20 Mbytes of online storage, with full cartridge to cartridge back-up in less than five minutes. It can be increased to 40 Mbytes by daisy-chaining an expansion unit, and off-line capacity is unlimited.

The system has two removable 10 Mbyte discs, housed in polycarbonate cartridges, constructed to protect recording faces.

The cartridges are so rugged that they can be dropped on to a hard surface without harming the enclosed discs.

"Spin-up speeds are under five seconds and there is an average of 35 milliseconds access time," says Peter Gardner, technical director.

The Honeycomb dual 10 Mbyte is priced at £3,750, with a single 10 Mbyte version at £2,800. Car-

tridges are £65 each. The Micro Technology Group (CW), 51 The Peniles, The Bridge Wells, Kent TN3 5TL. Tel: (0892) 45433.

Supporting Human Resource Management Systems

Today, many organisations faced with increasing software costs are turning to ready made systems as an acceptable and economic substitute for major in-house developments. Consider for example the complexities and enormous costs necessary to develop and maintain Human Resource Management systems. Peterborough Software, an organisation with an outstanding record of success, provide a range of products covering the full spectrum of people-related applications.

Unipay, Unipersonnel and Unipension are the market leaders and provide solid foundations for the company's future growth.

The activities of Peterborough Software extend to many parts of the world and the organisation views the international market as one of considerable potential.

A commitment to extensive research and development and a keen awareness of market trends ensures the company maintains its highly successful profile.

At the heart of Peterborough Software's operation is the Engineering Division which places a high priority on continuous product development. To keep pace with the current expansion programme they now wish to recruit a key member to the development team

IMS EXPERT

££15,000 + car

If you are an IMS expert and have extensive IMS DB/DC experience in a Systems Programming or Supporting role, together with sound IBM ASSEMBLER language experience, we would like to talk to you! You could play an important role in the implementation and development of Peterborough Software products operating under IMS.

...in Peterborough

Peterborough is a cathedral city with a very attractive blend of old and new. It boasts a growing business community and provides an outstanding range of leisure and shopping facilities. Its close proximity to many picturesque villages makes this an ideal choice for relocation. To encourage growth in the area, Peterborough Development Corporation will provide considerable help in locating new property.

Additional benefits include 5 WEEKS HOLIDAY (1984 holidays honoured), NON-CONTRIBUTORY PENSION, PERSONAL LOAN SCHEMES, BUPA and ASSISTANCE WITH RELOCATION.

For more information on this exciting opportunity and to arrange an immediate interview, contact Knight on 01-491 4706 quoting Ref YY600. Alternatively complete and return the attached coupon without delay.

COBOL PROGRAMMERS

ENVIRONMENT: 2 x ICL 2946, ME 29, SYSTEM 25 DRS, DME, TPS, COBOL, ASSEMBLER

Rediffusion Simulation are the world leaders in the design and manufacture of flight simulators. Vacancies have arisen for two Cobol Programmers for developments on the 2946 computers.

Applicants in their twenties should have 1-2 years' Cobol programming experience and, if selected, will be working in small development teams on a variety of applications, including writing and testing BATCH and on-line programs, as well as systems test. Some knowledge of TPS would be useful but training would be given if necessary.

In the first instance applicants should write including a comprehensive c.v. or phone for an application form to:

Mr J. A. Perry
Personnel manager - Work and Recruitment
REDIFFUSION SIMULATION LIMITED
Gatwick Road, Crawley
West Sussex RH10 2RL
Telephone: Crawley 28811 ext. 2

Database Team Leader

National & Provincial Building Society, the sixth largest society in the country, are embarked upon an ambitious project to develop a corporate database and install a terminal network in its 337 branches. To assist in this process we are looking for a manager to join our Technical Support Group, and lead the database team in the design and implementation of this large database.

The successful applicant will have the opportunity to do considerable original design work on the new system. Applicants should have at least 5 years' DP experience with the last 3 years using a Database Management System. Experience of database design techniques, as required and innovative mind and the ability to meet exacting timescales are all essential pre-requisites. Experience of Burroughs DMSII would be a distinct advantage.

Based in Bradford this position offers the range of benefits expected from a large responsible employer. Initial salary will be up to £12,500 depending on experience.

Please reply in the first instance to:
Mr. S. Middleton

Microcomputer Systems

Attractive 5 figure salary + car

Plessey Microsystems Limited is a rapidly growing and profitable company involved in the in-house design and manufacture of leading-edge microcomputer systems, including networked systems. Our products are making a major impact in commercial, engineering and scientific environments. In line with our 50% growth target in the next year, we have key opportunities in our PRODUCT SUPPORT and MARKETING functions.

Our primary requirement is for in-depth knowledge of UNIX but similar experience of other microcomputer operating systems will be considered. Knowledge of networking and/or communications will be an advantage.

These positions will involve a great deal of customer contact, and so the personal characteristics to operate effectively as an ambassador of the company are essential.

An attractive 5 figure salary is available, together with a company car and a first class benefits package. Full expenses will be provided to relocate to this central rural environment which has excellent communications to London and the South-East.

Please telephone George Elms for an informal discussion on Towcester (0327) 50312 between 9.30am and 5.30pm or Dave Willmore on Towcester (0327) 52273 between 7pm and 8.30pm (reversing the call charge). Alternatively fill in the Quick Response Coupon or send a full c.v. to: John Lerner, Personnel Executive, Plessey Microsystems Limited, Water Lane, Towcester, Northants NN12 7JN. Please quote reference CWP/868.

COMPUTER AIDED MANUFACTURE

Cambridge

CADCentre Limited is a new Company which has evolved from one of the most respected CAD/CAM research organizations in the country. A range of products is being developed to complement and extend CADCentre's existing Manufacturing industry products.

The Company offers a pleasant working environment, with flexible working hours and 5 weeks' holiday. Relocation assistance is available where appropriate.

Project Leader

You will have responsibility for a team of Analyst/Programmers developing computer aided tools for manufacturing industry in collaboration with major industrial companies. You need to have experience in engineering programming/analysis using formal techniques. You must be fluent in FORTRAN, preferably 77, and have a working knowledge of at least one of the following:
PRIME/PRIMOS, IBM/TSO OR VAX/VMS.
You should have led a team through a successful product development cycle. You should be prepared to produce results to an agreed project plan within demanding timescales. You should be familiar with the problems of the Engineering/DP interface in industry and be confident in leading a team of both engineers and computer specialists. Proven experience is more valuable than formal qualifications.

Please send a c.v. or phone for an application form, quoting reference JMAS 01, to:
Mrs G. M. Dodd,
Personnel Manager,
CADCentre Limited,
High Cross,
Madingley Road,
Cambridge CB2 0HB

Analyst/Programmers

You need a strong FORTRAN, preferably 77, programming background and experience of working with formal software development procedures in a technical environment. You should be conversant with at least one time-sharing command operating system. Manufacturing industry experience would be an advantage. You will have an innovative approach to your work and be able and willing to communicate with your team colleagues. These posts offer you the opportunity to work on challenging assignments utilizing databases, graphics, modelling and user interface tools and techniques. You should be qualified to degree level in a numerical scientific or engineering discipline.

Computer Professionals

A new focus for your ambitions in a vital industry

ENFIELD

up to £14,000

As a vital source of energy, gas continues to grow from strength to strength providing a crucial fuel to industry and private customers alike.

Our policy of Eastern Gas is to employ the most advanced techniques available to provide an unbeatable service to all customers. Hence, computer professionals will not be surprised to learn that the level of our computer technology is second to none, being continually updated to keep in line with the latest advances in the field.

We are committed to an ambitious development programme for the next 5 years and require additional development staff to meet its demands, within an advanced 2900 environment.

The Region currently runs a dual ICL 2976 under VME/B, and also a 2966.

We use structured programming; most of our new systems will be TP based and use Database; and we are committed to the use of Data Analysis and Data Dictionaries.

Career opportunities are outstanding, and we are currently looking for experienced professionals - talented, ambitious men and women - for the following posts at our modern offices in Enfield, just north of London:

Analysts

With a minimum of 3 years systems and programming experience in a relevant field.

Programmers

With a minimum of 2 years COBOL experience.

In addition to generous salaries, there is a benefits package which includes sick pay and pension schemes, staff restaurant, and minimum 28 days holiday a year. Relocation assistance may be made available where applicable.

For further details and on early interview ring Ted Kimberley on 01-3661234, day or Duncan Lockett on Hoddessdon (0992) 460563 evening. Alternatively, write to: Personnel Officer, Eastern Gas, Tower Point, Sydney Road, Enfield, Middlesex EN2 6TT.

EASTERN GAS

SENIOR APPOINTMENTS - £14K +

THE MICRO TECHNOLOGY GROUP

The Micro Technology Group, founded in 1978, is now one of the most firmly established systems houses in the South East of England. Its product range includes both IBM and WANG business systems, which it sells to a broad portfolio of customers in the South East of England and to a number of major corporations throughout Europe. It also provides a wide range of hardware and software products, several of which have been developed in house, to an extensive dealer network.

The group is based in the Pantiles, the elegant eighteenth century heart of Tunbridge Wells. The area provides reasonably priced housing, an excellent shopping centre and good schools. It is well positioned for access by train to London and, by means of the new M25, to the national motorway network.

Micro Technology is now a multi-million pound company and will be expanding considerably over the next two years. As part of this expansion we require:

SALES PROFESSIONALS IBM AND WANG PC c.20-40K + CAR

If you are young, articulate, intelligent and hard working, with a proven record of success in the microcomputer or related industry, and you want to continue that success in the Garden of England, we need you to help us sell the IBM and WANG personal computers.

SALES PROFESSIONALS DISTRIBUTION OF PERIPHERALS FOR IBM-PC c.20-40K + CAR

As one of the leading suppliers of peripheral equipment for the IBM-PC, we need the services of a self-motivated sales professional, preferably with a good understanding of IBM products, to sell these market leading products to IBM authorised dealers and national accounts.

If you feel you have something to offer for either of these requirements, please telephone Nigel Wood on (0892) 46433.

Please send applications, including current cv to:
Micro Technology Limited
51-53 The Pantiles
Tunbridge Wells
Kent TN2 5TE

18,000 REASONS WHY

this could be the job for you ... SYSTEMS & PROGRAMMING MANAGER

Our client, part of a major International Corporation, whose activities cover a wide range of computer services, electronics and telecommunications, offer this challenging career opportunity.

Ideally, you should have solid systems and programming experience, gained in an IBM environment, together with specialised telecommunications skills - preferably distributed data processing.

Reporting to the M.S.M., you will be an experienced man-manager - possibly a Project Manager seeking to move up the ladder and play a major role within a rapidly expanding and dynamic company

If your experience is relevant, you are interested in working on the Surrey/Hants border, a COMPANY CAR and believe you are worth up to £18,000 plus and substantial benefits then phone
Stuart Blake on Farnborough 516141
to arrange a confidential interview. Alternatively send detailed cv, quoting ref: SB420

SENIOR APPOINTMENTS - £14K +

EDP MANAGER

WATFORD UP TO £15,000

A move into management is offered the D.P. professional with extensive COBOL programming experience in a multi-user real time environment. Reporting to the Financial Director, the EDP manager has total responsibility for the main computer installation, a new DG MV4000 replacing an Eclipse C300, and with the assistance of two operations staff, for providing EDP services to the company. Responsibilities include application systems development and maintenance, introducing new information processing methods, and working with other group companies.

With sales of £3½ million, 140 employees, and new top management, Ealing Beck Limited, the subsidiary of a small U.S. public company, is increasingly successful in its business of manufacturing optical components and distributing them worldwide through catalogue selling.

In this stimulating environment, the immediate task of the successful candidate will be completing the conversion of existing commercial applications to the new equipment. The next major project is to introduce new production control systems, for which experience of manufacturing systems would be a distinct advantage. If you believe you can succeed in this position, please write with details of your career to Chris Hodson, Ealing Beck Limited, Greycoine Road, Watford WD2 4PW.

Developing software systems for Saudi Arabia's public authorities

The U.K. and Saudi Arabian Governments are working together on an exciting new technical co-operation agreement. The United Kingdom is represented by British Arabian Technical Co-operation (BATC), a government agency formed to provide British expertise on a Government-to-Government basis to the countries of the Arabian Peninsula.

BATC now seek very experienced and well-qualified computing professionals to work as advisers on a number of interesting projects. All posts are based in Riyadh, the capital of Saudi Arabia.

The Ministry of Finance and National Economy's present installation includes an NCR Centurion 85/55 using VRX/COBOL and they now need to develop applications, initially using the TRANPRO on-line system and

Senior Systems Analysts

c. £26,000 p.a. inc. tax free

An appropriate degree plus experience of government financial control requirements are essential for these posts. You will need to be self-starters and able to operate at a senior level. Knowledge of the Ministry's present hardware and software is not required.

Quote Ref: BA/105

Programmer

c. £18,000 p.a. inc. tax free

A degree or a Technical College Diploma plus at least ten years' experience including a good knowledge of VRX/COBOL are essential. Some experience with TRANPRO, TOTAL and NCR 85/55 would be advantageous.

Quote Ref: BA/106

The Ministry of Municipal and Rural Affairs has an IBM 4331 which is used for information systems for urban and regional planning and administration. These systems are to be considerably developed and new hardware and software will be acquired in the next 12 months.

Systems Analysts/Engineers - Computer Centre Experts

c. £20,000 p.a. inc. tax free

To advise on all questions relating to present hardware and systems software as well as that projected for the new Computer Centre.

You will need a masters degree in electronics engineering, computer science or similar and six years' experience or a bachelor's degree and

These contracts are with British Arabian Technical Co-operation for a period of two years, renewable by mutual consent. In addition to the tax-free salaries, the posts attract a comprehensive benefits package.

For further details, please write quoting appropriate reference number and enclosing a full cv to: Miss T. Sutherland, Recruitment Manager, BATC, 121/8 Grosvenor Gardens, London SW1W 0DZ. Or telephone 01-730 4511, ext. 273.

TOTAL data base. However, the main objective is to review applications which may require the acquisition of new hardware and software.

ten years' experience - including systems engineering, tendering, analysis of hardware and supervision of installation and the operation of computer centres.

Quote Ref: BA/107

Programmers

c. £18,000 p.a. inc. tax free

One to work on modifying existing software to meet town planning needs and develop new software for urban and regional planning, land registration, mapping and local planning. The other to modify existing software and develop new software for expediting and co-ordinating projects, administration and documentation.

Quote Ref: BA/108

For either post, you will need a Technical College Certificate and a minimum of six years' experience which should have included FORTRAN and COBOL programming. Experience in the development of applications software for public administration users is essential.

Riyadh is a rapidly expanding city. At present the only computer facilities available to the Municipality are terminal links to the Government's National Computer Centre IBM 4300.

Computer/Microfilm Expert

c. £22,000 p.a. inc. tax free

To develop their own computer centre, the Municipality seek expert advice on tender evaluation, computer applications, operation and staffing requirements and staff training.

You will need to be a graduate with extensive experience which should have included working with a major U.K. local authority.

SALES and MARKETING PROFESSIONALS COMMUNICATION SYSTEMS (Viewdata)

OUTSTANDING LINKS NEEDED FOR OUR UNIQUE COMMUNICATION CHAIN

TRIDAs

THE COMPANY

Our client, CENTRE LINK COMMUNICATIONS LTD., is a leader in the development of a series of advanced communication systems which has outstanding market potential for various groups of professional bodies and members of the general public in the U.K. Its first commercial system, PROPERTY LINK, is leading the market in systems designed specifically for ESTATE AGENTS in various property markets in the U.K. and overseas. The rapid acceptance of PROPERTY LINK is a practical indicator of the company's outstanding growth potential and it is ideally placed to exploit markets demonstrating current "explosions in demand" for more sophisticated communication systems. The PROPERTY LINK system has been designed in conjunction with Baric (the computer services company owned jointly by Barclays Bank and ICL) and it has access to considerable technological and financial resources.

THE POSITIONS

To realise its exciting growth potential, the company is undertaking a major expansion of the promotional effort behind PROPERTY LINK system and it wishes to fill a number of critical missing links in an expanding sales and marketing structure as shown below:

- * U.K. MARKETING MANAGER (circa £18K + CAR)
- * U.K. SALES MANAGER (circa £18K + CAR)
- * SENIOR SALES EXECUTIVE/POTENTIAL FIELD MANAGERS (circa £15K + CAR)
- * SALES EXECUTIVES (circa £9K + CAR)

The two senior positions are new appointments which will report directly to the Sales and Marketing Director at Board level. The MARKETING MANAGER will assume total responsibility for designing the marketing strategies and plans for the organisation while the SALES MANAGER will have the critical role of developing a sizeable and highly selective sales team. The SENIOR SALES EXECUTIVES will be experienced computer/communication sales professionals and will be prime candidates for rapid promotion into field management at the next stage of field force expansion. The SALES EXECUTIVES positions represent ideal opportunities for talented salesmen/women from other fields to enter this highly demanding and rewarding market place.

These positions are associated with extremely competitive basic salaries plus an excellent package of fixed benefits. Moreover, the results orientated incentive schemes are first class as are the prospects for future career development.

THE APPLICANTS

For the MARKETING MANAGER and SALES MANAGER positions, candidates will be aged between 30 and 40 and will have had a minimum of 2 years' successful experience in marketing management and sales management respectively. Preference will be given to individuals who have had proven experience in D.P. sales and/or the estate agency market.

The SENIOR SALES EXECUTIVES will be aged between 28 and 40 and will also offer a proven track record of over 2 years' in computer/communication technology sales. Candidates for the SALES EXECUTIVE positions will be aged between 28 and 40 with a proven track record in a competitive sales environment and will also offer a good standard of education and a high level of literacy and marketing environment.

For further information please John Davies between 8 am and 7 pm. Local interviews will be held in early March and successful candidates will be invited to a demonstration of the PROPERTY LINK system in operation.

Recruitment Division
65 High Street, Marlow, Bucks. SL7 1BA
Telephone: Marlow (06284) 75204

CENTRE LINK
COMMUNICATIONS LTD.

Hoechst

THE COMPANY

The largest pharmaceutical company in the world, Hoechst employs over 7,000 people in the U.K. alone. In addition to its activities in the fields of medical products, industrial plastics, animal health and plant protection, Hoechst subsidiaries and associated companies include such household names as Berger Paints, Rochas perfumes, Trevira, Cynol and Cuprinol. The U.K. headquarters is a modern purpose-built office complex situated at Hounslow, easily accessible by road, rail or the London Underground.

THE DP ENVIRONMENT

Currently an IBM 4341 model 2 running MVS, CICS, DL/I and COBOL, with a 3083 model E due to be installed in March. In addition, Hoechst is committed to personal computing, with 19 Apples in use under the guidance of an Information Centre.

THE VACANCIES

Two project leaders are required initially, with further expansion planned. They must be experienced systems analysts, preferably - but not essentially - with an IBM background and a good understanding of TP and database concepts and practice. Similarly, the successful applicants need not be former programmers, but they must be able to lead a programming team. The principal qualities needed are powers of leadership, self-motivation, and the ability to take a project from feasibility to implementation.

It is unlikely that candidates with less than four years' relevant experience will be suitable.

PROJECT LEADERS to £15,000 plus substantial benefits

THE REWARDS

are considerable! With a basic salary of up to £15,000 p.a., a review in June, a bonus based on Company results (an additional 2½% paid in 1983) and the possibility of an Exceptional Merit Bonus of up to 8% of salary for outstanding employees, financial rewards are among the best in the industry. In addition, benefits include:

- free private medical insurance
- subsidised staff restaurant
- discount company shop
- 23 days leave per year
- 35 hour working week
- full relocation expenses where applicable

and the many other advantages that only working for a major multinational corporation can bring.

YOUR NEXT MOVE

is to telephone 01-499 1948 for an application form, quoting ref: GM/2/73, or write with a FULL cv to Geoff Mackenzie, P-E Appointments Division, 166 Piccadilly, London W1V 9DE.

UNIQUE OPPORTUNITY IN PUBLISHING

U.K. SOFTWARE MANAGER

McGraw-Hill is a billion dollar world leader in publishing and the communications technologies. Over the last three years alone, the U.K. Book Company has achieved substantial sales and profit growth especially in the areas of computer books and software.

We now wish to recruit a U.K. Software Manager to spearhead a major sales drive and increase our market share in this area of high opportunity.

The person appointed must be commercially minded; show a good track record in selling educational, small business and home use software to the U.K. market and have the technical ability to present effective demonstrations of McGraw-Hill software.

Apart from outstanding career opportunities, there is an excellent commencing salary; a bonus scheme; company car and an attractive benefits package.

Applications in confidence to:

Paul Jenkinson
U.K. & European Personnel Director
McGraw-Hill House, Shippenhangers Road
Maldenhead, Boreo SL8 2DL
Telephone: (0628) 23431

Graduate Programmers and S/W Engineers

AVON/WILTS/SOMT/GLOS & S. WALES

Superb career opportunities exist for Graduate Programmers and Software Engineers throughout the West Country in both Technical and Commercial environments.

Utilise and fully develop your skills in the following areas:-

- * Telecommunications - PBX systems
- * Real-time and Microprocessor controlled systems
- * Off-shore applications and data acquisition
- * Software houses/bureaux - ICL, IBM and DEC based
- * Insurance/finance - Database, on-line, "office of the future"

DATA PROCESSING MANAGER

NFER-NELSON is the country's leading publisher of educational and psychological tests and research. We require a Data Processing Manager to control a newly established MAT 310 on-line system and supervise the order processing department.

This is an opportunity to join a medium size but expanding company and advise management on all aspects of new technology in our product base as well as internal systems and procedures.

The successful candidate must demonstrate good general technical skills; have a working knowledge of Business Basic and the ability to analyse, programme, develop new systems and to communicate at all levels. Some experience of managing a small but very supportive department would be an advantage.

Starting salary c.£10,500 per annum.

For an application form please contact:

Sue Martland
NFER-NELSON LTD
Derby House, 2 Oxford Road East, Windsor
Tel: Windsor 66991

INTEL SYSTEMS - CAREER INTERNATIONAL OPPORTUNITIES FOR MARKETING SPECIALISTS

Intel, inventor of the microprocessor and acknowledged leader of the microcomputer industry, is making a major thrust into the computer systems business: the product range is based on the industry's leading microprocessor architecture.

A key element of this programme is the creation of a European Marketing group based at Swindon, which has been established to support our European Sales Force and customers. It is being staffed by product marketing, customer marketing and technical support specialists for OEM products, covering a wide spectrum of applications.

We are looking for experienced marketing, sales and technical support specialists for the following product areas - Real-time Technical OEM, Commercial OEM and Database Management.

Successful candidates, probably aged 25-35 will be presented with a unique career opportunity to operate at the forefront of technology with a company at a high growth stage in the systems business. Travel within Europe will be required, together with in-depth training on an annual basis in California, Oregon, Arizona or Texas.

OUR IMMEDIATE NEEDS ARE IN THREE KEY AREAS:

CUSTOMER MARKETING

Candidates should be able to develop close working relationships with the field sales force, with the objective of acquiring new business. Sales experience in OEM small computer systems is essential, together with well developed commercial skills. International travel will be required and some European language skills are highly desirable.

PRODUCT MARKETING

To undertake European responsibility for product lines. Key responsibilities are generating sales development plans and identifying/implementing marketing programmes throughout Europe, including new product launches, merchandising and training.

TECHNICAL MARKETING

The requirement is for in-depth skills coupled with the ability to develop software for demonstration purposes. Technical presentation skills need to be well developed, together with the ability to write technical material. We are looking for specialists in specific areas like UNIX/XENIX, DATABASE, REAL-TIME APPLICATIONS AND NETWORKS.

Our conditions of service match the excellence of our staff and products. Our benefits package is amongst the best in the industry and matches the high expectations we have of our employees - competitive salaries, non-contributory BUPA, life insurance, pension and stock participation plans, plus a generous relocation package where necessary.

COME ALONG AND DISCUSS THESE OPPORTUNITIES AT ONE OF OUR FORTHCOMING OPEN HOUSES:

AT MANCHESTER on 29 February at the EXCELSIOR HOTEL, MANCHESTER AIRPORT
BETWEEN 12.00 midday and 9.00 p.m. TEL: 061 437 5811
AT HEATHROW on 1 March at the POST HOUSE HOTEL, off Junction 4 of the M4 BETWEEN 12.00 midday and 9.00 p.m. TEL: 01 759 2323

If you cannot make either of these venues, telephone for an application form, or send a copy of your CV to Don Street, European Systems Marketing Manager, or to Ray Withey, Personnel Manager
INTEL INTERNATIONAL, PIPERS WAY, SWINDON, WILTSHIRE, SN3 1RJ. TEL: 0793 486388.

These Vacancies are open to Male and Female applicants.

The Power of Observation

Software Sciences is at the leading edge in developing radar software, setting the pace with complex high integrity, high availability real-time systems. Powerful radar is essential to operational systems in civilian and military air traffic control, marine navigation and weather radar processing in all of which we are established on an international level.

We are seeking candidates with a good education and a sound background in real-time systems design. Projects currently under development include civilian and military air traffic control and weather data processing systems - specific application areas include:

signal processing
tracking algorithms
radar data processing
flight plan information systems
data base systems

Depending on experience areas of responsibility will include, software design, systems design, team leadership and project management. Experience of one or more of the following machines, DEC PDP11, VAX, Texas Instruments Hewlett Packard or special purpose hardware and interfaces is highly desirable.

Although based at Farnborough, Hants, candidates should be mobile as visits to client sites may be necessary.

In return we offer an excellent salary, a wide range of company benefits and assistance with relocation where appropriate.

For further information and an application form, please telephone our consultant Francesca Drinkwater or simply clip and return the coupon below.

SPECIAL RECRUITMENT FEATURE

March 8 Issue

OPPORTUNITIES IN THE MIDLANDS

You naturally demand the most from your computer hardware and that means you need professional staff with the necessary data base experience to make sure your system works best for your business.

If you are currently recruiting professional dp staff, then the March 8 issue of Computer Weekly provides an added bonus to help you find the people you are looking for. Our special feature, highlighting the wide range of opportunities for dp staff in the Midlands, will create an ideal platform for you to spell out the advantages of working for your organisation.

This is just one of many career-linked features to be published during 1984. Our aim is to talk to individual groups of readers, both as employees and as people with particular skills and problems and is just one indication of Computer Weekly's commitment to providing the platform needed by recruitment advertisers when seeking staff.

Computer Weekly is Britain's largest circulation computer journal and continues to offer the best guarantee anywhere of coverage of today's computer-skilled professionals. Equally important is Computer Weekly's dominance of the key job-moving categories. More than ever before, coverage exceeds all other journals in the market.

To reserve space in the MIDLANDS FEATURE phone (01) 661 8080 today. Copy deadline 15 March.

Classified Department, Quadrant House, The Quadrant, Sutton, Surrey, SM2 5AS

See it in life

VAX Opportunities

To maintain its dominant position in its own area of retail distribution, this Organisation is rapidly moving towards a leading position amongst high technology users. The present development program provides exciting opportunities for ambitious computer professionals to work with the latest equipment in a dynamic environment.

Senior Analyst/Programmer
up to £12,500

Rapid growth in completely new application areas has created this exceptional opportunity for a mature computer professional. The successful applicant will join a small but expanding team to work on future projects in the warehousing and distribution areas. He/she will already have a proven track record of the successful design and implementation of commercial systems in similar areas. Experience of the VAX machine is essential, preferably with experience of VAX/VMS and VAX/DBMS.

Planned projects make promotional opportunities certain and the successful applicant must, therefore, demonstrate that he/she will be ready to lead a team in the near future. (Assistance with relocation available).

Analyst/Programmer
up to £9,000

For this position, 2 to 3 years experience of minis is required, ideally, but not essentially, to have included some exposure to VAX hardware, with sound fluency in COBOL. This position is ideal for a self-motivated Candidate who seeks career progression working with "state of the art" technology. Planned growth is extensive enough to make promotion opportunities certain, therefore some potential for leadership in the applicant would be welcome.

To take the first step to a secure and rewarding future, contact **JIM SMITHAM** on **061-833 0427** (24 Hour Answering Service) or 061 439 2679 (Evenings and Weekends between 7 p.m. and 9.30 p.m.).

An ideal opportunity for SOFTWARE/HARDWARE ENGINEERS to move into TECHNICAL SALES SUPPORT

Up to £15,000 + 2 litre car

Graphics systems have come a long way since drawings first came off the drawing board and into the computer. The latest colour graphics systems show a degree of sophistication and versatility that make them equally at home in an up front defence environment or in a fashion house.

Our client is part of a major international organisation, manufacturing and marketing a range of 'state of the art' plotting and graphics systems for use in all aspects of modern industry. They already hold a large share of the market and wish to further expand their already wide applications in an under-exploited market place.

This is where you come in. We are seeking two self motivated individuals to join a small sales support team involved in all pre-sales activities. Your role will be to advise customers on the various software applications packages and hardware configurations as well as carry out demonstrations, training and running benchmarks.

These are key positions and successful candidates are likely to have extensive experience with DEC or IBM systems and may have some knowledge of remote or graphics applications. Communications skills are also extremely important because of the high level of customer contact.

The company is based in Berkshire and full product training will be given in the UK and California. Conditions of service are excellent and reflect those of a large international company including medical, bonus and pension scheme.

If you think you have the skills and initiative to join our client at the forefront of graphics and plotting systems applications, contact Val Abi on Reading (0734) 509151.

Real Time Software Specialists

**Farnborough,
Hants.
To £13K**

Real Time Developments is an independent systems house specialising in high-quality real-time software systems. We have an immediate requirement for a number of real-time software specialists to enable us to expand in line with our plans for 1984. The people we are looking for are preferably graduates with two or more years experience in any real-time applications. Experience should have been gained on minis or micros, with knowledge of both assembler and high-level languages.

Apart from a highly competitive salary, benefits include BUPA, health assurance and paid overtime. The company offers ample scope for genuine career advancement, with employees being encouraged to assume responsibility as soon as they are ready for it.

1984 holds great promise for RTD; why not be part of our success story? For more details contact Geoff Barnes on Farnborough (0252) 846213 or write to

Real Time Developments Ltd.,
Lynchford House, Lynchford Lane,
Farnborough, Hampshire, GU14 6JA.

SENIOR ANALYST PROGRAMMER

SYSTEMS 38

c.£15,000

CITY

ANGLO EUROPEAN CONTAINER LINE is a leading ship management and liner agency based in the City of London.

The company utilises System 38 hardware with links to four remote office locations throughout the UK, running Liner Agency Accounts, Container Tracking, Telex and Word Processing packages.

Future development plans include the computerisation of liner operations, ship accounting systems and the installation of direct links to ships.

To ensure successful completion of these projects, we have been retained to assist in the recruitment of a Senior Analyst Programmer able to define and implement the new systems with initiative, maturity, personal authority and stamina. Exposure to System 38 RPGIII is essential.

For further details of this genuinely challenging position offering a high degree of responsibility and involvement together with opportunities for occasional foreign travel please contact MELVYN DEARLOVE at Computer Two Thousand.

Cincom Systems

Field Support Consultants to £15K + Car

You may be an experienced programmer or analyst programmer looking for that big break into customer support or even already in support and looking for an opportunity with a market leader. Your background will include:-

- Applications experience
- Good IBM on-line and/or database experience.
- Experience of manufacturing systems will be advantageous.

The position is field based, supporting specific accounts and will therefore demand presentable appearance and good interpersonal skills.

TIS MANTIS

High technology products need superlative support. To maintain Cincom's reputation for excellence we are seeking to recruit additional support staff.

MFPS TOTAL

Product Support Specialists to £15K + Car

Further opportunities exist to complement the expanding product support group, providing problem solving expertise, often at assembler level, for assigned products. This is a young dynamic team and the position requires:-

- 2 years IBM assembler.
- Good IBM on-line and/or database experience.
- Excellent problem solving skills.

Your background should include Mantis, Environ, Total, CICS or DL/1. Successful candidates, ideally graduates in a numerate subject, will need to be enthusiastic, self motivating and enjoy regular customer contact.

Excellence in Software Technology

Both positions are based in MAIDENHEAD, BERKS

CAREER OPPORTUNITIES FOR SYSTEMS PROFESSIONALS

10k-18k

Powell Duffryn Systems Ltd, part of a large international group are seeking additional senior staff to support their continued growth, who will take responsibility for the development and implementation of interactive systems for clients in the industrial sector.

PROJECT CONSULTANTS

You will have a minimum of eight years data processing experience and must have taken full responsibility for a significant interactive system from conception to implementation. A professional committed approach to the implementation of projects within budget is essential. A degree of professional qualification would be an advantage as would experience in a manufacturing or accounting environment.

PROGRAMMING TEAM LEADERS

You will have a minimum of four years data processing experience including at least one year in a supervisory role. You will be expected to take full responsibility for the scheduling, quality control and performance to timescale and budget of the staff under your control. The systems being developed are substantial and make use of data base and data dictionary techniques. The main programming language use is COBOL, with on-line development facilities supported by dedicated VAX computers.

SYSTEMS ANALYSTS

You will have a minimum of four years data processing experience and will be able to demonstrate positive achievement in that period. Your role in a project team will be varied and involve close liaison with clients.

SYSTEMS SUPPORT PROGRAMMERS

Your experience in data processing will not be substantial but will have involved use of assembler languages. Systems supported will be based on the VAX range of computers and UNIX based machines.

Salaries are competitive and there is a company car scheme for certain positions

To apply, please send full cv to R. M. Hall

PL/I ALL LEVELS!

To £12,000
We have numerous clients in London and the home counties who require experienced PL/I programmers ranging from Programmers to Analysts/Programmers. The minimum requirement for Programmers is 12 months' PL/I experience and for Analysts/Programmers previous analytical skills. The companies range from small software houses to large in-house installations and offer a wide variety of prospects and benefits. £12,000/800.

12 MONTHS' IBM COBOL?

SURREY To £9,000
An opportunity has arisen for a programmer with a minimum of 12 months' IBM COBOL to join this leading financial group based in the heart of Surrey. The company have recently installed an IBM 4341 running under DOS/VSE. You will be part of a small team developing on-line database systems. Your CICS and PL/I experience would be an added advantage although training will be offered. The position carries benefits normally associated with a large leading company. GW4325

RPG III/FINANCE

CITY To £10-12K
Continued O.P. expansion and the upgrade from IBM System 34 to System 38 has created a new requirement for an IBM System 38 RPG III Programmer/Analyst. This is an expanding department therefore the candidate appointed can expect career progression. Working conditions are excellent coupled with a full banking package which includes subsidised mortgage, yearly bonus and excellent facilities. To discuss this position further please contact me as soon as possible. GW4326

MOVE INTO MANAGEMENT

CENTRAL LONDON To £14,000
This is an ideal opportunity for a competent Analyst/Programmer to move into a management position. Initially the main emphasis of the job will be the implementation of new systems. The requirements for this position are three years' programming, design and analysis experience using RPG II with in-depth knowledge of the IBM System 34. If you feel confident about meeting this position then please immediately for further details. GW4301

HEWLETT PACKARD - COBOL

£10,500 + Relocation
My client based in Herts is a leading manufacturer of chemical products in the UK. They run a network of HP3000 computers and are currently embarking upon the development of local systems. These will include stock control, ledger, distribution, etc. They now require Analyst/Programmers with 12 months' COBOL experience and a knowledge of the HP3000 machines. There will be much scope for career progression. An excellent salary is offered, combined with a profit share scheme, non-contributory pension, sports and social club, and relocation assistance. HW4153

PICK ALL LEVELS

To £14,000
Presently I have several excellent openings within London and the Home Counties for individuals whose experience is gained largely or exclusively in Pk-based Software. Insurance companies, software houses, household names and many others offering technically interesting, challenging and stable career openings to those with relevant backgrounds. If you are looking for a new opportunity call now for confidential discussion or send a current c.v. to the address below. MW12742

UNIX

CITY To £12,500
My client, part of an international banking group require an experienced programmer for their O.P. expansion plans. This will be a challenging and unorthodox role with an organisation dedicated to making the best use of their sophisticated programming facilities. A thorough knowledge of Unix is essential on any machine and experience in a financial environment would be an asset. All banking benefits apply. MW4296

DATAPoint

BERKSHIRE To £9,000
As part of their continued expansion this international organisation would be interested in receiving applications from programmers with at least 18 months' recent experience in Datapoint. The company can offer excellent working conditions and a stimulating environment with promotion prospects for the right candidates. Possibility of travel within UK and abroad if desired. MW4248

MICRO PROGRAMMER/

ANALYST
SURREY To £12,500
Outstanding opportunity to join this well-established software house at the onset of their micro development plans. The ideal candidate will be prepared to play a major role in these developments having worked in a micro environment for a minimum of 18 months with a thorough knowledge of CP/M systems and dBase II. In return the company can offer an excellent career path and 1st class benefits. MW4158

ICL 2900 COBOL

PROGRAMMERS
MIDDLESEX To £5,500 to £10,500
A number of interesting opportunities have arisen for experienced commercial programmers to join this expanding computer department. The company is one of the most successful in the export business. They utilise ICL 2900 running under VME. The senior position is open to a programmer who must also have had supervisory experience, and both positions require a knowledge of structured programming. If you have a dynamic and progressive personality and are looking to develop your skills, this position will be of great interest to you. EW4302

ICL PROGRAMMERS

RURAL SOUTH To £7,000-£11,000
More and more companies are moving to the Silchester Valley of the South, due to expansion. At the moment I have two companies recruiting a number of programmers at most levels. The junior position requires 18 months' good COBOL experience in an ICL environment and they offer training to the right applicant in TPS. The more senior position requires knowledge of VME/DB and on-line projects. In return both companies offer an excellent career path and all large company benefits. EW4328

MVS/COBOL

CITY To £12,000
Leading financial concern in the city has recently embarked on a new venture that will require the setting up of a new team. Two years' IBM OS or MVS COBOL is essential, whilst CICS would be advantageous. Training can be provided in PL/I, and structured programming techniques, and there will be every opportunity to strengthen your analysis. Benefits could include a mortgage. CW4136

IBM SYSTEM 38

MIDDLESEX To £11,000
Three clients in the engineering, manufacturing and retail trades are seeking programmer/analysts to join their development teams. 12 months' IBM System 38/RPG III is required, although candidates with two years' RPG II would be favourably considered for retraining. If you would like more involvement, and a better salary please contact me now. CW5346

HONEYWELL SENIOR

To £12,000
A company who are a major name in the field of design and graphic equipment, are expanding their O.P. department and are looking to recruit an additional member to lead a small team. They utilise Honeywell Level 640P56 with COBOL. Experience of designing and implementing at least one major project from concept to completion is required along with good communication skills. They offer normal large company benefits and relocation expenses where applicable.

ICL ANALYST/PROGRAMMER

FOR THE SOUTH WEST To £11,000
The company are involved in several exciting new development projects and require a number of talented professionals to enhance their friendly team. They run dual ICL 2900 and ME29 and a number of microcomputers. If you have experience of COBOL, VME, DOS, DBase or TPMS in any level, and wish to work in a department offering genuine development opportunities, and you would like to further your career, give me a call now. EW4094

PDP - VAX - RETRAINING

To £12,500
Retraining is offered to Programmers and Analysts/Programmers with over 12 months' OBC/PDP experience - and at least one of the following COBOL, BASIC, FORTRAN, DIBOL, MUMPS. If you are ambitious and looking to work with VAX machines, then you will be working with the latest VAX/VMS machines. The systems are challenging and will involve the successful applicant in user liaison/analysis. At the senior level, promotion into management would be a natural progression for financial systems analysis. Besides an excellent salary, a large holiday bonus is offered. HW4202

HEWLETT PACKARD - SENIOR

ANALYST
To £14,000
Do you have five years' D.P. experience, combined with at least one year's involvement on HP3000 machines? My client can offer you a similar position within their close knit and highly successful D.P. department. The appointed candidate will be expected to advise with senior management and will have responsibility for major development projects. The company use the latest D.P. technology and HP utilities and are dedicated to computerisation. It is envisaged that the post will lead to board management within a year. I also have similar posts in Berkshire, West London, Hertfordshire and Scotland. HW4087

DOS/VSE COBOL

BERKSHIRE To £13,000
I have four companies in the Berkshire area currently seeking programmers up to Team Leader level. The more junior posts require 18 months' IBM DOS/VSE COBOL and the Team Leader should have five years' + similar experience with some supervisory skills, and the ability to motivate and control staff. Please call me for details of these excellent opportunities. CW4038

ANALYST/PROGRAMMER

MIDDLESEX To £12,500
Two years' IBM COBOL in a DOS/VSE or MVS environment, with some CICS experience essential. My client, part of a world-wide organisation, needs a competent analyst/programmer who can communicate effectively with users, and is keen to extend their analysis skills in an on-line and database environment. Excellent large company benefits. CW4216

IBM SENIOR PROGRAMMER

EAST LONDON/ESSEX To £11,000
If you have around four years' IBM COBOL experience with some CICS knowledge and are looking for a stimulating career in a commercial environment, this company will develop your analytical skills. They are also looking for IBM COBOL programmer with one-to-two years' experience. Training can be provided in CICS and database techniques. AWA194

IBM SYSTEMS PROGRAMMER

LONDON To £14,000 + BONUS
An international financial organisation have an urgent need for a systems programmer with a minimum of two years' experience working in an on-line environment using MVS, TSO, CICS, IMS/DB and JES2. Knowledge of DOS/VSE an advantage. Senior systems people are also required with a rising salary according to experience. AWA144

RPG III PROGRAMMER

NORTH WEST LONDON To £10,000
A medium-sized company just outside London are looking for a RPG III programmer with a minimum of one year's experience, preferably using MAAPICS. However, they will consider good RPG II people to retrain on to the IBM System 38. AWA229

RPG II ANALYST/PROGRAMMER

CENTRAL LONDON To £11,000
A large export/import company in London are looking for analyst/programmers with three years' RPG II experience and a financial/accounts background. The projects are interesting and involved, and will be a mixture of development and support work in a small team environment. AWA225

DEC - PROGRAMMERS AND

ANALYSTS
£5IVE FIGURES!!
This major London-based finance organisation is currently embarking on several large development projects and is seeking programmers and analysts in the key roles. A background in DEC/BASIC/++2 is essential - you will be working with the latest VAX/VMS machines. The systems are challenging and will involve the successful applicant in user liaison/analysis. At the senior level, promotion into management would be a natural progression for financial systems analysis. Besides an excellent salary, a large holiday bonus is offered. HW4202

HONEYWELL PROGRAMMER**NEW POSITION - NEW SYSTEM****DPS 7 COMPUTER****MEDICAL INSURANCE AGENCY -****MAJOR INSURANCE BROKERS**

We are looking for an ambitious programmer to join our computer team who are developing a new database client accounting and information system. You should have up to two years' experience on Honeywell equipment ideally on L64 or DPS 7 hardware, using GCOS, COBOL, IDS2 and TDS. You will join a small team where everyone gets involved, so personality as well as the skills you can offer is important.

This could well be your first job move - in the RIGHT DIRECTION! INTERESTED? Ring or write to: Peter Barnes, Medical Insurance Agency Ltd., B.M.A. House, Tavistock Square, London WC1H 9JD. Day 01-388 1301. Evening (7-9 pm) 0727 57641.

PROGRAMMER

c.£9,000

Derwent Publications, a company at the forefront of scientific and patents information services and with a world-wide clientele, have a vacancy for an enthusiastic and innovative young programmer.

The successful candidate will be of at least 'A' level standard with about four years' commercial experience (or a graduate with two years' experience) of IBM/COBOL with MVS and TSO/SPF. Tasks will include assisting in the development of new project work, maintenance and support of existing applications and considerable liaison with external bureaux.

A competitive starting salary (neg. a.s.a.) will be paid and there is a range of other benefits. Career prospects are good in an expanding and increasingly important department of a flourishing business.

Shift Control Officer

CARDIFF up to £15,000

Marketing and distributing gas throughout Wales is a large and complex operation, and computer services are making an increasingly important contribution. Wales Gas are now looking for a Shift Control Officer to supervise and control a computer operating shift on a rota basis.

Located in prestigious purpose-built accommodation in the centre of Cardiff, our installation consists of dual ICL 2966 processors, GTS tape decks, PDS640, PDS16C and EES2 disc units, LP1500s and NPS front end processors.

This is a key management position with specific responsibility for setting work priorities; providing operational support in respect of hardware, software and application programme malfunctions; monitoring throughput against schedules; maintaining operating standards; user liaison; training shift personnel and participating in the implementation of new hardware. We operate a 24 hour, five day week and you will be required to work appropriate shift patterns.

Applicants, male or female, must have ICL VME 2900 operating experience together with at least seven years' in computer operations including two years at supervisory level. You are likely to be at graduate level but more importantly have well developed leadership and organisational skills.

Starting salary is £13,000, including shift allowance, rising to £15,000. Benefits are those normally associated with a large successful organisation and include relocation assistance where appropriate.

To find out more, ring Len Campbell on (0222) 33131 ext. 3490, or apply in writing, quoting ref H45/B6 to: Graham Moore, Senior Personnel Officer, Wales Gas, Helmsford House, Church Way, Cardiff CF1 4NB.

DEVELOPING RESOURCES NATURALLY

In more than 20 countries around the world Phillips Petroleum is exploring for oil and gas, and is at the forefront of the search for new sources of energy. In addition to the company's world wide exploration activities it is also a major producer of petrochemical products ranging from chemicals to fertilizers.

Phillips Petroleum Europe Africa is responsible for the Group's interests within the UK where it has significant developments in the North Sea - and Africa where it has production sites off the Ivory Coast. A key element in the development and support of the Group's activities world wide has been in data processing and within its new London headquarters is based the DP centre for the Europe Africa operation.

To help keep pace with their immediate and future developments they now offer the opportunity to join them to work on a range of diverse applications from engineering to marketing and at the same time broaden your horizons within a professional and innovative environment.

Their computing facility is sophisticated with dual IBM MVS JES3 based mainframes utilising CICS/DLI, IMS, TSO linked to a world wide telecommunications network. Whilst COBOL is the main development language extensive use is made of the fourth generation language FOCUS. Working within project teams engaged in developing and supporting a comprehensive range of systems you will also be closely associated with the needs of the end users.

IBM COBOL PROGRAMMERS to £11k

A chance to develop yourself personally and professionally within a progressive environment, and the scope to liaise with users. We require a minimum of 18 months experience, fluency in COBOL ideally OS or MVS orientated with some experience of CICS.

ANALYST PROGRAMMERS to £13.5k

An opportunity to build on your programming background by becoming more deeply involved with the investigation and support of user-department needs and for supporting the development cycles to implementation. You should have had at least 3 years experience with a solid COBOL programming background and proven ability in CICS. Experience of user contact at analyst level and knowledge of VSAM or DLI is advantageous.

TEAM LEADER/DESIGNER to £15k

You'll play a key role in leading and steering teams of varying sizes blending a strong technical background with good communication and motivational skills. You will have the proven ability in designing CICS based systems and will have played a key role in at least one major systems implementation. A solid IBM COBOL programming background and VSAM combined with successful team leading experience is essential. Experience of DLI is advantageous.

Emphasise development in your career - call
Hugh Macer or Rod Mackenzie on 01-734 9723 up
to 7 pm or evenings and weekends on 0279 419156.

Computer Appointments & Contracts Ltd

Guaranteed to stop professionals in their tracks

When true professionals find a brick wall standing between themselves and real career advancement, they stop, take stock and do something about it. If you fit into that category, read on.

Right now you'll be a project leader, project manager or an analyst programmer. Preferably you'll have a degree and at least three years experience in one or more of the following: In depth Systems Development experience (hopefully in a DEC environment); Office Automation and its

commercial implications; Data Management Techniques; Networking Technology. Our essential requirement, however, is your determination and hunger to succeed.

What you want is to take on greater responsibilities in an environment where you'll enjoy a really high profile. And that's exactly what you'll get working at the heart of the DIGITAL EQUIPMENT COMPANY in Reading.

You'll be managing projects for Europe and the UK that will bring you into contact with virtually every business function of the corporation. That's why these opportunities exist only for people who can work under pressure and do a quality job at the same time. For those who have the ability, this is an opportunity to build yourself a career with unlimited potential.

DIGITAL EQUIPMENT COMPANY LIMITED is an equal opportunity employer offering highly competitive salaries and full relocation where necessary.

To find out more please clip the FREEPOST coupon or telephone the number below quoting reference 0810 and by return you will receive an application form and company profile.

By return of post, please send an application form and client company profile to:

ANALYST/PROGRAMMER

BASIC c.LONDON to £10,000

We are recruiting for an International Mining Group with its UK and European headquarters based in Central London. This division alone produces a turnover of over £200 million p.a.

The data processing is currently based around a CMC Reality and a satellite link to a Prime 850 in Toronto backed up by the latest word processing systems. The Analyst/Programmer will have sole responsibility for the D.P. department as well as interfacing with the users to determine their computing needs.

Applicants should have a sound computing background with at least six months' Basic programming experience (CMC Data Base would be of special interest) in order that they may maintain and enhance existing systems. A vital part of this position is the liaison with the in-house users producing "Ad Hoc" programmes from the totally integrated accounting system. Candidates with any communications experience or knowledge of word processing systems would be of particular relevance since the client places great importance on the development of these areas.

As well as an excellent starting salary a good benefits package is available.

For further details on this "Ground Floor" opportunity please contact Sean Orsler at Apex.

IBM-Operations

City c £7,500 (inc S.A.)

International Commodities Clearing House Limited, provides essential financial services to the London commodity markets. Our clients expect and receive a high standard of service, and in order to achieve this we have developed sophisticated and reliable computer systems.

Our current configuration consists of twin 8MB IBM 4341 MODEL 12s and a 4MB 4341 MODEL 1, providing a Real Time system under VM/SP, DOS/VSE, POWER/VSE, utilising CICS and BTAM. The current teleprocessing network consists of approximately 500 VDUs and teleprinters on 180 sites to which international links will be implemented shortly.

The installation is currently involved in a conversion to MVS and an IBM 4381 MODEL 2 is due to replace the 4341 MODEL 1 later this year.

To play a key part in these developments we now require operators with at least 2 years' experience of VM/CMS, DOS/VSE and CICS, and ideally a knowledge of MVS. We can offer an environment that is both stimulating and demanding to candidates who are prepared to work hard and are able to adapt to a constantly changing environment.

A 12-hour shift pattern is in operation over five days (with days off).

The remuneration package reflects our City success: a salary of c£7,500 (inc S.A.) and an attractive range of benefits that include: four weeks holiday; mortgage subsidy scheme; non-contributory pension; LVA and lunch facilities; personal loan scheme; sports and social club. For further information and an application form please contact:

SYSTEMS ANALYSTS PROGRAMMERS

to £13,000 to £10,500

IBM 3083, MVS/JES 2, CICS, TSO/SPF - EASYTRIEVE

Established in 1919, this British-owned electrical company based in North London is a modern day success story with group profits for 1983 reaching £13.3 million, an increase of over 50% on 1982.

Following their commitment to Computer Processing with a strong directional strategy to MIS, the company has recently upgraded to an IBM 3083 running MVS.

Parallel developments are required to utilise the power of the new hardware, including commercial online systems and plotting CAD systems within technical areas of the company. Series 1 configurations are also to be implemented at each manufacturing location.

These developments promise to create an exciting and challenging period within the computer services department and we have been retained to assist in the recruitment of highly skilled personnel to complement the existing team.

Applicants for the SYSTEMS ANALYST positions should possess solid analysis experience gained in an IBM environment and should have taken a project from design through to implementation; exposure to online systems and database techniques is desirable. Successful candidates, who will be self-motivated individuals with the ability to communicate effectively at all levels, will be involved at all stages of systems project development covering Financial, Marketing or Manufacturing areas.

We are also seeking PROGRAMMERS to develop online and batch programs working as part of a project team assigned to a particular development area. A strong IBM COBOL background is the prime requirement for these positions. Although a knowledge of CICS, Database and/or EASYTRIEVE would be advantageous, both in-house and external training will be given where necessary.

In addition to a competitive salary and the opportunity to work in a progressive and demanding environment, the company offers a full range of benefits including Pension and Sick Pay schemes, Share Ownership Option, Saving Related Share Option, Subsidised Restaurant and five weeks' holiday.

For further details of these positions, please contact MELVYN DEARLOVE at Computer Two Thousand.

c.£9,500 p.a.

J.W. Spear and Sons PLC is a leading stock company in the toy and games industry (marketing the world-famous 'Dorland' games), and seeking to recruit a motivated individual to the UK.

A vacancy has arisen for an Analyst/Programmer to join the D.P. Development team, which is a key part of a significant phase of expansion based on the UK, with particular emphasis on the areas of production control and office automation.

The ideal candidate will be in the mid 20s-30s, with at least two years' sound experience of COBOL, on the MVS, knowledge of production systems would be an added advantage. The position would require the candidate to be based in London or to visit the UK on a regular basis, or a programmer who wishes to gain experience of systems work.

Benefits include: a competitive salary, 20 days' holiday per annum (including 20 days' overtime), private medical insurance, staff discounts, pension scheme, etc.

To apply, please forward two copies of cv, to: Human Resources, J.W. Spear and Sons PLC, Richard House, Queens Road, Green Street, Epsom, Surrey, Middlesex TW20 7TB, or telephone 01-835 4444 for an application form.

MARKETING MANAGERS JOIN MICOM IN CALIFORNIA

\$55,000+ Bonus + Stock Option

MICOM Systems Inc. designs, manufactures and markets a variety of micro computer based data communication products. Now a world leader, MICOM has achieved 100% p.a. sales growth in the last four years with an increase in turn over from \$6 million to over \$100 million. This impressive growth in both home and major international market results in four exciting opportunities for high calibre professionals.

You will lead a team of highly qualified engineers responsible for the market planning and management of one of the following key product areas.

VOICE/DATA MULTIPLEXING
* Knowledge of voice PBX/data multiplexing
* Technical marketing experience
* Strong personnel/communication skills

PROTOCOL CONVERTERS (IBM)
* Experience of IBM 3270 (either as user or designer)
* Knowledge of access methods (VTAM, BTAM, etc.)
* Familiarity with TSO, CICS, etc.

Ideally you will be qualified to degree/equivalent level and will have a proven track record in data communications. These positions represent once in a lifetime opportunities to radically develop your career and lifestyle in one of the world's key locations within a tremendously successful organisation.

Contact: Shafiq Ahmed B.Sc.
Please telephone or write to Kramer Westfield International Ltd., 23 Victoria Street, Windsor, Berks, SL4 1HE, Windsor, (07533) 56155-9.00 am to 7.00 pm.

Recruitment consultants in the Data Communications Industry

Earn up to £23k net of tax in the Arabian Gulf Excellent conditions and package Latest hardware and software techniques

The Arabian American Oil Company (Aramco) is renowned for utilising the latest techniques related to a large IBM environment. The exploration and petroleum centre is at the forefront of this technology having provided in record time a full operational D.P. Installation incorporating IBM 3033's and 3081. The further progression of this operation, combining a fully integrated information centre for its users plus technical planning division, has created a need for more IBM professionals in the following areas:-

Operations Analysts

• Technical support with some knowledge of program product installation e.g. TSO/SPF, SAS, JCL, Writing, etc., to support Systems Programmers and/or
• Change management with the ability to evaluate CPU utilisation in and MVS, VM environment. Knowledge of IBM INFOSYSTEM would be an advantage as would an operational overview of PL/1 and/or FORTRAN.

Hardware/Software Evaluation

• Technical Planning and the Information Centre division will liaise on hardware and software evaluation respectively. The former requires ability to present the best methods and technology available to management following hardware evaluation. The latter would offer a user service, evaluating, recommending and providing support/training in new software products. Useful knowledge: MVS, VM, SAS, TSO/SPF, PL/1, FORTRAN, etc.
• Specialist in IBM communications networking methods, architecture and technology.

Hardware Maintenance

• Typically a field service engineer with experience of VAX 11/780 and graph plotting equipment e.g. CALCOMP, BENSON, APPLICON, etc.

Operators

• To perform operation of IBM 3033's, 3081's at a senior level running under MVS, JES 2 and 3. Experience of Cray 1 useful.
• VTAM network operators with experience of 3705's, 3270, NCP, NPDA and RACAL MILGO communications equipment.

Aramco is located on the Arabian Gulf and enjoys the benefits of a Company operated community with splendid recreational facilities. Successful candidates can expect subsidised air-conditioned accommodation, free medical treatment, generous holidays and return flights to the U.K. The contract of employment is for an indefinite term and is on a single status basis.

Client interviews will be held in London in mid-March so contact Penny Stock or Valerie Blackborow now for further information and screening interviews on 01-836 8411 at Computer People Limited, VLI House, 68 St Martins Lane, London WC2N 4JF.

SOFTWARE HOUSE PROFESSIONALS

SALARIES £9K-£22K

Would you enjoy the travel and variety that only a top software house can offer? Do you need a fast moving, stimulating environment working on leading edge Real Time development? In other words would you like to be part of a young, dynamic, no fuss company? Yes? Then you could well find exactly what you are looking for with S-COM.

S-COM is a rapidly growing force within the systems engineering market place. Our expertise and stature in communications (military, telephonic, area networks), process control, graphics and defence applications ensures that both our clients and staff are kept in touch with the future.

S-COM has a flexible, non-bureaucratic organisation with highly competitive salaries and benefits and plenty of opportunities to satisfy career aspirations. So, if you have Real-Time expertise in any of the following:

- ★ DEC or INTEL architecture
- ★ Assemblers and high level block structured languages
- ★ Scientific, engineering or defence end users
- ★ Military, communications or process control applications

Call Lawrence Mills, Geoff Aldridge or Adam Hardman and discuss the bright new future that could be yours - TODAY

INNOVATIVE BUSINESS SYSTEMS ANALYST

Technical Induces is a rapidly expanding company within an international group and specialises in the distribution of a wide variety of microfilm and microfiche-based information systems that provide essential technical data to engineers, designers and buyers.

We have a well-established DEC VAX 11/750 System as part of the production process. We are now ready to use the system for the development of new products. To assist us, we wish to recruit an energetic free-thinker who meets the following requirements:

- At least two years' experience in business systems analysis
- Some computer programming experience
- Professional attitude
- Pragmatic age 25-35

We are particularly anxious to find someone who is not steeped in the traditions of conventional analysis, application development, coding, etc. We intend to pass straight from analysis to implementation using the ADAMS systems development tool. Knowledge of ADAMS is not essential but would be an advantage.

If you are looking for some weeks of fulfilling your role as a Business Systems Analyst, with a salary of £10,000 per annum, please apply to: G. W. S. Waine, Director of Technology Development, Technical Induces Limited, Wilton Road, Bristol, BS1 4DW.

PROGRAMMER

An experienced Programmer is required by Software Consultancy in a rural area near Bath. It is expected that the successful candidate will be capable of working with clients in the office or on site with the minimum of supervision. In addition, experience with at least one of the following is essential:

- DEC PDP 11
- RISC
- BASIC
- PLUS
- COMPUTER APPLICATIONS
- WITHIN THE CONSTRUCTION INDUSTRY

Please apply in writing with a comprehensive c.v. to:

South West Systems
The Old Brewery
Fresford, Nr. Bath

COMPUTER ENGINEERS FOR SUPERCOMPUTERS

● POSITIONS
The company continues to grow rapidly and therefore requires additional Senior and Junior Engineers in the Bristol, London and West Country areas.

The Senior Engineer position involves high technology maintenance of Cray Systems under the direction of a Senior Engineer. Shift work and overtime may be necessary. The successful applicants will have the opportunity to travel within Europe and the USA.

● EXPERIENCE
Senior applicants should have two years' mainframe engineering experience and will preferably be educated to degree or equivalent standard. Junior applicants should be qualified to HNC/HND or equivalent, practical experience would help but is not essential. Full product training in the USA will be given to the successful applicants. These posts offer an excellent opportunity to join a very successful and highly progressive company.

● SUPERCOMPUTERS
Cray Research is a market leader in the design, manufacture and support of large-scale scientific systems. Cray Research Computers are installed in the USA, Japan, France, Germany, UK, Netherlands and Sweden. Cray enjoys a reputation for high-quality performance and support.

● THE PACKAGE

- The company package for employees is first class and includes:
- Excellent salary
- Flexible working
- Company car
- Share purchase scheme
- Life assurance
- Private medical plan

Please phone Phyllis Morrell on 044 489371 we will pay for the cost of any application form or travel to the Engineering Manager, Cray Research, 1001 1st Ave., Northbrook, Illinois 60062, USA.

IBM ANALYST PROGRAMMERS FRANKFURT

A large and well-known financial organisation is seeking additional staff for their installation in WEST GERMANY. Applicants must have the following experience in addition to a desire to obtain a permanent career position abroad.

- * Minimum three years' COBOL or two years' Assembler on IBM4341 DOS/VSE
- * Knowledge of CICS VTAM ICCF VM
- * Interest in either applications or systems programming

Successful candidates will receive a full relocation package for themselves and their families. Interviews will be held in London.

Please contact Marilyn Davidson or David Thompson on 01-836 6775

or send a detailed c.v. to the address below

Computer Personnel International
30-32 Southampton Street, London WC2. 01-836 6776

CHALLENGING OPPORTUNITIES ON A VARIETY OF HARDWARE

Our client, an international company based in the City, retains large IBM mainframes, minis and micros.

They offer successful candidates the opportunity to gain varied experience with excellent promotion prospects.

They are currently seeking:

COBOL PROG/ANALYST to £11,000

Ideally applicants will have three years' COBOL preferably gained in an IBM environment.

This is a position on new DEVELOPMENT projects and offers much analysis work for the future opportunity to be involved in a wide variety of hardware and software.

MICRO SUPPORT to £11,000

This is an Analyst/Programmer type role where applicants should have experience of MICRO ASSEMBLER and good user skills. This is a senior position and offers responsibility and opportunity to become included in a wide range of packages.

TWO PROGRAMMERS to £8,000

These are excellent opportunities for two Programmers to enhance their careers. Applicants should have a minimum of one year's experience in either IBM COBOL or MICRO ASSEMBLER.

These positions offer much development work and training on a variety of hardware.

If you are seeking variety and responsibility please call SUE EVANS.

Project Leaders

Herts: Salaries to £15K

The Systems Development Department of a U.S. based company, which specialises in Ethernet-based products, is actively recruiting Project Leaders with a thorough knowledge of software development techniques. Successful applicants will be responsible for teams of between 5 and 10 Programmers and Analyst/Programmers engaged on the design and development of an exciting new range of networking systems products. A degree and

fluency in a block structured language are essential, as are good presentation and communication skills. The ability to plan and direct the development of software and hardware for the overall design of new products will form a high percentage of the job content and, therefore, respondents with such experience will be especially welcome.

Ref: L/77A

C3 Systems

Inner London: Salaries to £18K

The Systems Group of a major supplier of Defence and Emergency services software has a number of urgent requirements from Analyst/Programmer to Consultant level. Candidates should have at least 4 years experience in Communications, probably gained in a MOD establishment or systems house environment, and also possess a degree, or equivalent, in a numerate subject. Ideally, applicants will have worked on systems such as Parnigan, Wavell

or BATES although serious consideration will be given to those with a background in System X or other telecommunication software. At the more senior levels it is essential that respondents have analytical and design skills with further experience of MMU, fault analysis, loading and sizing being highly desirable. All positions will attract a bonus payment or a company car. Ref: L/77B

Electronics Design Engineers

Central London: Salaries to £14K

Profile: Our client, a leading British Systems House, is seeking results to meet continued growth in its business in Defence and the Emergency Services. The Company has a large number of projects involving the design and production of advanced digital electronic hardware.

Current projects include:

- * Interface equipment for local area network communication systems.
- * advanced signal processing hardware.
- * data acquisition and analysis systems.

Personnel: The Company is seeking several electronics design engineers with at least one year's experience of digital circuit design. Candidates should have the ability and motivation to take on team leadership responsibility, and experience of, or an aptitude for, proposal preparation. The Company seeks some results who have moved on to successful project management after several years experience in digital circuit design. Applicants should have a degree or equivalent qualification. Experience of one of the following would be an advantage.

- * data acquisition and analysis hardware
- * special architecture computers
- * embedded microprocessor systems
- * advanced communications and networked systems

Reward: In return for your personal commitment and technical skills the company offers an excellent salary together with an outstanding range of ancillary benefits. Applications: Please submit a well documented resume or alternatively telephone one of our consultants quoting Ref: LJS/11.

Compiler Development

London & Home Counties: Salaries to £14K

A major Systems and Software House has recently embarked on a large new project requiring the expertise of a number of Compiler Development Specialists. Suitable candidates will be given to the development of either a Pascal or Ada compiler proposal stages through to the creation of a fully self-supporting compiler. Ref: L/77C

Real-Time Programmers

Central London: Salaries to £11K

A leading Systems House and Consultancy is seeking to recruit additional Real-Time Programmers for its Central London Head Office. Suitable candidates should be graduates with at least 12 months subsequent programming experience in a real-time scientific environment. It is essential that you

offer fluency in at least one of the following: PASCAL, C, FORTRAN, ADA, CORAL-66 or Assembler. Hardware experience is less important, but preference will be given to applicants who have recently worked in a development role on PDP-11/VAX; Intel 8080/85 or Motorola 6800/68000. Ref: L/77D

Simulation Systems

S. Home Counties: Salaries to £14K

Having recently gained a number of prestigious contracts, our client has an immediate requirement for FORTRAN Programmers and Simulation Engineers. The company is sited close to well developed motorway and rail facilities and therefore these positions will appeal to those living in the major Thames Valley towns, Heathrow and Oldwick areas or

S.W. London. All candidates should be aged 23-32 years and preferably hold a numerate degree. Your recent programming or systems experience should have been in the areas of (a) VLSI and hybrid circuit design (b) simulation of ballistic/dynamic systems or (c) battlefield/ tactical weapons performance. THIRTY + NEW PROJECTS AWAIT within major multi-user installation in Central London. Ambitious plans encompass extensive development of on-line database systems on IBM 4300/5000's and replacement with new generation IBM 3080, and continued use of minis and PCs. Energetic, innovative analysts are therefore sought to spearhead these new systems. Candidates will be well-acquainted with database/on-line design preferably in an IBM situation, have successfully implemented a previous project and possess good technical awareness. Programmers are also required at varying levels. Whilst the more senior persons will have good IBM COBOL with IMS DB/DC (DL/I considered), lower level programmers with up to 2 years IBM COBOL and early exposure to CICS, will be TRAINED on database and structured programming techniques.

REALISE YOUR POTENTIAL to lead a special projects team responsible for converting Cobol software running on DEC PDP and VAX equipment to Data General CS80 and MV4000. It is hoped the successful candidates will make a significant contribution by offering at least two years solid COBOL programming, and detailed knowledge of Data General operating system. Full training will be given on DEC PDP and VAX equipment. If you have the determination to succeed, and the desire for advancement into: *SYSTEMS/BUSINESS ANALYST *PRODUCT DESIGN *CLIENT *SYSTEMS SUPPORT *SALES SUPPORT - CALL US NOW.

Advanced and technically demanding projects within the buyout specialist finance sector exist for both systems analysts and consultants. We seek a number of high class individuals, dynamic and technologically minded - within the London area. A sound background in IBM, ICL, Tandem or NCR would be a distinct asset. If you possess expertise in one or more of the following systems areas and wish to move to a dynamic working environment offering exceptional career opportunity, then telephone for more detailed information: *MORTGAGE *ACCOUNTING *BUILDING SOCIETY *WHOLESALE/RETAIL BANKING *MONEY MARKET *INVESTMENT *ACCOUNTING *FUNDS TRANSFER *INSURANCE

Software and Hardware Engineers with the "End of Project" Blues up to £17,000

Recognise yourself? I hope so. Because I have an immediate requirement for talented and ambitious software and hardware professionals for challenging positions within a wide variety of environments. In all cases, the candidates most likely to succeed are those who respond to the challenge of highly sophisticated systems with clients who are forging ahead in development areas.

I make it my responsibility to ensure that I tailor the needs of the applicant to the requirements of the client. I deal directly with line management - to get the bottom line - and I make certain that feedback from the client is accurately conveyed to the applicant.

A selection of my immediate requirements are as follows:

SOFTWARE ENGINEERS

to 14K - INTEL/FORTRAN/PASCAL, INDUSTRIAL CONTROL - HERTS
to 14K - VAX/VMS, PASCAL/CORAL, SUPERVISORY CONTROL - HERTS
to 13K - UNIX, 'C', PLM, PASCAL, COMPILERS/LANGUAGES - HERTS
to 14.5K - LAN, X25, ETHERNET, CAMBRIDGE RING - HERTS/BRIS
9.5K-12.5K - INTEL MDS, PLM, ASSEMBLER - TELECOMS - SOUTH LONDON
10K-14K - 8086/8088, PC/DOS/MSDOS, PASCAL, LAN - MIDDX
to 15K - MOTOROLA/Z80 - UNIX, 'C', CORAL, OFFICE AUTOMATIONS - WALES
to 17K PACKAGE - INTEL, ASSEMBLER, PLM - COMMUNICATIONS - GERMANY

COMPUTER SERVICES LTD.

We've got it!

Burroughs Analyst Programmers

The name of Burroughs is synonymous with information management throughout commerce and industry.

The success of our highly sophisticated data-processing equipment and systems has firmly established us as a major mainframe manufacturer and supplier of hardware and software.

We have recently reorganised our internal management information services function based in West London and have invested heavily in new technology to help us achieve our aims. But we also need to invest in suitably experienced personnel to assist us in our ambitious implementation program of new systems.

COBOL EXPERIENCE IN A COMMERCIAL ENVIRONMENT

ON-LINE AND DATA BASE TECHNIQUES

USER LIAISON SKILL

AMBITION

There will be considerable involvement with departments within the subsidiary, throughout the Europe-Africa division and with Detroit headquarters.

Although experience on Burroughs' large systems using DMS II would be an advantage, it is not essential. Full training will be provided.

For further information and an immediate interview contact our recruitment consultant, Simon Koning in London. Successful candidates can expect a competitive salary and the benefits associated with a major employer.

Computer Services Ltd.

(7978)

The Company

We are the leading manufacturer of power automation products and telecontrol equipment and systems within the United Kingdom. Our Systems Software Department is embarking upon new projects at the forefront of today's technology and this has resulted in a need to recruit a number of high calibre personnel with real-time minicomputer system experience.

The Projects

We are currently involved with the design and development of control, distribution and monitoring systems for the Electricity, Gas, Water and Oil industries.

The Candidates**TECHNICAL SUPPORT ANALYST**

We would like to hear from candidates who have:-
 * A Degree in Engineering or Computer Science.
 * Approximately 8 years software experience in real-time minicomputer applications including some involvement with telecontrol.
 * Good communication skills with the ability to understand system capabilities and user requirements.

SENIOR PROGRAMMERS, & PROGRAMMERS

For these positions we would be interested in candidates with the following skills:-
 * A minimum of 2 years software experience is essential with a high level language background - preferably CORAL 66.
 * A Degree in Engineering/Computer Science.
 * Some customer interface experience is desirable for the more senior positions.

REAL-TIME SOFTWARE OPPORTUNITIES IN TELECONTROL SYSTEMS

**East Midlands
Salary £8,000 — £13,000
Plus relocation**

We are situated in an attractive East Midlands location where housing costs are very reasonable and a generous relocation package will be offered where appropriate. Large Company benefits are excellent and include 5 weeks holiday and paid overtime for the Programming positions. To find out more, contact our Advising Consultant, Rod Beeson on 021 643 8501 (business hours) or 021 777 8743 (eves/wknds)

Experienced Sales Professionals

**Required by
a Leading Systems House**

Leaders in the field of Turnkey solutions, Systemsolve, part of the Hunting Organisation are looking for experienced Sales Professionals to handle Data General, Hewlett-Packard and CTL Turnkey business sales throughout the United Kingdom. Systemsolve, having achieved an international reputation for being a leading British owned systems house, has expended not only its turnover (now in excess of 5 million pounds) but has also expanded into the DG, H-P, CTL marketplaces with a strong range of vertical market software. To continue with this major expansion program, Systemsolve are currently looking to employ experienced Sales Professionals. Ideally, you should be aged between 24-35 years and have been successfully selling in either the hardware or software marketplaces. You should also be capable of working under pressure, making important decisions and be self-motivated. For the successful applicants, there is a high basic salary (which is negotiable), an executive company car, plus the usual benefits that you should expect from a large International company.

For further details, please ring Steven Knowles-Baker on 01-370 2012/3, or alternatively, send a brief cv to him at N.K.B. Associates Ltd, 159 Gloucester Road, London SW7 4TH.

All enquiries will be treated in the strictest of confidence.

Fortran Programmer/Analysts

up to £9,500

**Looking for a chance to get into
commercial systems development?**

It's not often that an opportunity arises for you to apply your FORTRAN experience in a commercial environment. But just such an occasion has arisen.

A multi-million company in the film processing business has PRIME Computers with a large number of terminals to service their laboratories in the UK and on the Continent.

Due to expansion they now seek Programmers with a minimum of two years' experience in a high level language, ideally FORTRAN, who possess the

maturity and communication skills to move into Analysis. An awareness of PL1 would be an advantage.

Present systems span a range of commercial and production

applications, and your responsibility will include the specification, implementation and subsequent support of new developments. Self-motivation and a willingness to travel are key requirements.

Based at Reading, Berkshire, the package includes annual bonus, subsidised staff restaurant and other benefits.

Please write with full personal, career and salary details to the address below, quoting ref: S3106/CW on the envelope.

Your application will be forwarded directly to our client unopened, unless marked for the attention of our Security Manager with a note of companies to which it should not be sent.

UNIX Systems & Applications Senior Sales Executives Applications Engineers Field Service Engineers

London & E. Midlands: Salaries to £25K

PROFILE: keen computer based is a leading supplier of UNIX based systems and networks (especially OMNINET) and is again poised for a period of planned growth in 1984.

PRODUCT: Our client's new product line represents an innovative yet evolutionary approach to the resolution of business problems encountered by both single and multi-user sites. It offers:-

- * Unrivalled combination of price/performance in the price range of £25,000 - £250,000.
- * The very latest MC68000 micro-computer based UNIX systems.
- * A comprehensive range of proven office automation software and packages readily available in the U.K.
- * High performance, high quality UNIX based graphics work stations.

SENIOR SALES EXECUTIVES: To capitalise on this unique product line Senior Sales Executives based in the East Midlands or The City are urgently sought to complement the company's existing sales force. Successful candidates will, most likely, currently be selling integrated UNIX or mini-computer based systems to one or more of the following sectors:- finance/banking, manufacturing, retailing or Research & Development. Facilities within academia. Above all, you must demonstrate a high level of achievement and personal commitment over a continuous period of 3 years and be capable of on-target earnings of at least £25,000 per annum.

APPLICATIONS ENGINEERS: Applicants, aged 25-40 years should be qualified to HND or B.Sc. level. Your programming background must include fluency in two or more of 'C', PASCAL, FORTRAN or Level II/RM COBOL within a UNIX, PRIMOS MULTICS or OS32 environment. Familiarity with U.K. accounting practice is a considerable advantage especially for those with a current background in financial or systems analysis. Candidates who have used or implemented a relational database (e.g. DBASE II, INFORMIX or RAPPORT) in a business environment are encouraged to apply. You will be expected to visit clients' sites in a pre or post sales support role. A willingness to travel within U.K. and U.S.A. as and when necessary is of paramount importance.

FIELD SERVICE ENGINEERS: The successful candidates will work alongside, and for, the recently appointed Hardware Engineering Supervisor within the Division's rapidly expanding Engineering Department. You should be aged 25-35 years and preferably have completed an engineering apprenticeship. Your current or recent background should include two or more of:- hardware/software interfacing of UNIX or mini-computer based systems, quality assurance and control, co-ordination and supervision of product deliveries, pre-installation and on-site services, or in-house fault finding activities. This position will greatly appeal to the career minded since our clients anticipate an early promotion.

REWARDS: For all positions total earnings will be limited only by ability. The company offers a competitive salary, an outstanding range of ancillary benefits and excellent career prospects. You will be offered either a company car or generous allowance in lieu.

APPLICATIONS: You should supply a well documented resume or alternatively telephone one of our Consultants quoting Ref: LJS/12.

ICL COMPUTER PROFESSIONALS

Come on board Britain's most progressive ferry company. Townsend Thoresen, part of the European Ferries Group has consistently been voted top ferry company by the travel trade. This success has led to a major expansion of the group's computer activities based at Dover. A real time reservations system is in operation with terminals throughout the UK and on the continent. This system also hosts an interactive agency viewdate system utilising PRESTEL GATEWAY. Operations are based on twin ICL 2960s. The service is provided 24 hours per day, 363 days per year. The viewdate system is front ended by a MODCOMP classic configuration. Additionally, support is provided to several micro installations throughout the UK.

SYSTEM SUPPORT PROGRAMMER

A system programmer is required to join our busy technical services section. Four years' sound experience is required at least one of which must have been spent in a VME support role. Experience of one or more of the following would be an advantage: COBOL, PASCAL or DME. The right candidate must be able to demonstrate the ability to work on their own initiative.

ANALYSTS

Experience of VME/DME transition will be of particular interest, as will practical experience of on-line systems, database, mhl and micro systems. Candidates with limited analysis experience having a solid programming background, will also be considered.

These positions offer excellent opportunities, highly competitive salaries and benefits packages which include concessionary travel and a pension scheme.

(10021)

Our client has the distinction of being the first company in the world to commercially offer the 68000 processor. They are one of the market leaders with a comprehensive and highly successful range of 16/32 bit multi-user systems, complemented by an extensive range of vertical market software, all produced by the company.

As a result of further growth our client is seeking to employ the following technical personnel:-

£12-£14K + Car + Benefits

This position offers the opportunity to become part of an extremely professional team. The successful applicant will provide both pre and post sales support of software running on the Motorola 68000 16/32 bit multi-user systems.

Suitable applicants could come from a wide variety of backgrounds but experience of pre sales support in a mini/super micro environment would be ideal. The successful applicant will be technically competent and able to communicate effectively at all levels.

SYSTEMS ANALYST:

Circa £13K + Benefits

The company are for the first time, developing applications software outside the United States. This position offers the opportunity to become an integral part of this development team, which is expected to expand rapidly. The company are therefore seeking individuals who have the capabilities of growing with the position.

Ideal candidates will already have 3 years proven development experience with a mini/micro company. A good formal education and a knowledge of PASCAL would be advantageous.

Both positions will be based at the company's European Headquarters **SITUATED ON SURREY/BERKS BORDER** and offer exciting opportunities to join one of the most successful and rapidly expanding high technology companies in the UK.

The company offers generous fringe benefits, but the real benefits derive from working for a growing company which is already one of the outstanding successes of the 1980's.

Senior Programmer - Development

Saudi Arabia

c£27,000 pa

Our client, one of the largest banks in the Middle East, is currently installing data communication facilities with network management for its domestic branch network, and is in the process of defining the needs in all other areas of voice and data requirements. New software for banking applications are currently being developed, e.g. ATM's, message switching, electronic mail, enhanced accounting facilities to be installed on their NCR 8575/65 and 9300 systems.

The SNR Programmer (Development) will be responsible for the production of all development software to agreed installation standards and deadlines. He will enhance and maintain programming standards, maintain efficient programme testing service, and plan and control utilization of programming resources. Reporting to the EDP Manager, he will have responsibility for technical supervision of 20 programming staff, and for designing and maintaining staff training programmes.

The successful candidate should have a minimum of 5 years' proven DP experience (COBOL) with relevant project leading/programming management exposure. Experience of banking systems utilizing NCR equipment would be a distinct advantage.

The tax-free salary is complemented by excellent terms and conditions which include a two year renewable contract, transportation allowance, car loan, housing allowance, paid leave home and free medical treatment.

Please write - in confidence - with full career details to F. M. Blight ref. FY.1102/12.

Last year, we started a revolution in advanced automotive electronics by combining the outstanding expertise of both Lucas Electrical and Smith Industries to form a new company - Lucas Electrical Electronics & Systems.

Now, we're proud to announce that the revolution is well under way, and we're continuing to break new ground in automotive electronics technology, developing the sophisticated in-car systems of the next century. Our success and our confidence in retaining the major share in a growing market has led to increased capital investment, and has created the need for additional specialists at our Engineering Centre in Witney, Oxfordshire.

As a result, we're looking for the following engineers to play a key role - and to share in a very bright future.

PROJECT MANAGERS
You'll take control of a dedicated team of engineers engaged in digital design and programming a range of microprocessors using the latest techniques for a variety of instrument applications.

DEVELOPMENT ENGINEERS
To break new ground in the development of automotive electro-mechanical instruments and transducers. Qualified to Degree/HNC level or equivalent, you must have sound experience in research and development associated with instrumentation or with the light engineering industry.
Ref: CW2

MICROPROCESSOR ENGINEERS
For digital design and programming a range of microprocessors using the latest techniques and languages for a variety of instrument applications. Several years' experience including around 2 years in digital design and microprocessor programming is essential, and you should have a Degree/HNC or equivalent in a relevant discipline.
Ref: CW3

DISPLAY ENGINEERS
You'll be part of a team involved in one of these areas: 1) the design and development of state-of-the-art prototypes and pilot production processes for electronic display technologies, specifically LCD; 2) supervision, quality control, troubleshooting and some production engineering predominantly on LCD fabrication; 3) the design of display technologies applied to instrument systems, mainly for physical measurement, and research into the future applications of new technology.

In chemistry, materials science or other related discipline with 2 years' experience in Electronic Display technology.
Ref: CW4

ELECTRONICS ENGINEERS
To work on digital design and programming a range of microprocessors using the latest techniques for a variety of instrument applications. You should have several years' experience including around 2 years in digital design and microprocessor programming, together with a Degree/HNC or equivalent in a relevant discipline.
Ref: CW5

TEAM LEADER (PCB/Thick film)
To lead a team of engineers in a PCB/Thick Film design drawing office. You should be educated to Degree/HNC or equivalent with 4-5 years' experience.

Long live the electronics revolution!

In PCB/Thick film technology and some experience in CAD.
Ref: CW6

THICK FILM ENGINEER
To be involved in the design and development of thick film, with the emphasis on production processes. A Degree/HNC or equivalent is essential, together with 2-3 years' experience in Thick Film production.
Ref: CW7

PCB/THICK FILM PROCESS ENGINEER
To work on the design and development of PCB's and Thick Films, with the emphasis on the production processes involved. You'll need 2-3 years' experience in relevant production processes, together with a Degree/HNC or equivalent in a relevant discipline.
Ref: CW8

SOFTWARE ENGINEERS
You'll be joining one of a number of small project teams at various levels, working on the latest software using both high and low level languages. You should have a Degree/HNC or equivalent and a background in application or system programming and experience in one or more of the following disciplines: interactive graphics, CAD/CAM, data communications, office automation, automatic test equipment.
Ref: CW9

MECHANICAL DESIGN ENGINEERS
For a new team to be responsible for initial product design incorporating the application of the latest electronic technology within mechanical assemblies and packages designed for high volume production. Qualified to Degree/HNC or equivalent, you should have 2-3 years' relevant experience including a knowledge of CAD techniques.
Ref: DT10EW10/EE10CW10/TE10EN10.

We offer attractive salaries to match your qualifications and experience, together with the generous range of benefits to be expected of a major Group. If appropriate, we will provide first class guidance and an excellent financial package to assist with relocation to this superb, semi-rural Cotswold town. More important, however, are the superb opportunities that exist for you to develop a worthwhile career - and to secure your future by playing a key role in ours.

Please write, or telephone, quoting job reference number, between 8 a.m. and 7 p.m. to Sandra Jepsen, Lucas Electrical Electronics & Systems Ltd, Witney Engineering Centre, Witney, Oxfordshire, OX8 5EX. Tel: 0993 75992.

Lucas Electrical

A brighter future for engineers

01-636 7584

MVS/VM SYSTEMS PROGRAMMING

SKK, with headquarters in Chicago, USA, are the authors of the renowned Systems Security Software - ACF2 (The Access Control Facility) which operates under the MVS, VM & VS1 operating systems. Founded over six years ago our growth continues with a user base of 200 in Europe, 80+ in the UK, with over 1,100 throughout the world.

We currently have requirements for Systems Programmers with practical experience in some of the following areas: System Generation of MVS, VS1 or VM, SMP, JES, TSO, ASSEMBLER, Storage Dumps, IMS, CICS, ACF2 experience is an added advantage. The ability to understand technical problems and be able to communicate their solution is of prime consideration.

You will be providing ACF2 support to an impressive list of major IBM installations. These positions are based in our Central London offices, where a dedicated team is engaged in responding to questions associated with the complexities of the IBM operating systems and other proprietary software program products as they relate to the ACF2 security products. You may also aid in technical support within the UK and European marketing environment and customer education.

These consultancy posts will afford the chosen individuals significant exposure to a wide range of software packages and tools in use within the IBM mainframe environment thus enabling continued technical advancement.

Positions also exist for individuals interested in working in France and/or Germany. Appropriate languages a prerequisite.

These are obviously unique and superb opportunities for further developing your technical, business and communication skills, whilst working with experts on the most respected product of its kind in the IBM market place.

SKK, a progressive leader in an innovative field, offers qualified candidates with a strong desire to further their careers, competitive salaries and comprehensive benefits including non-contributory life assurance and BUPA cover.

Send resume in strict confidence to:
SKK (UK) Ltd., 140 Brompton Road, London SW3 1HY.
Attn: Office Manager

0701

- ★ Technical Support and Consultancy for major client installations.
- ★ Product Training in Chicago, USA.
- ★ European and USA user group meetings.
- ★ Technical excellence in the ultimate security of complex mainframe configurations.

MVS, SNA, VTAM, X25

TP Specialist Europe

WHATEVER NEXT?

For Amdahl, what comes next is probably the most exciting phase since our company was formed. As sales approach the billion dollar mark we are set to expand our TP products to provide a new dimension in communications technology.

Correspondingly we are seeking TP Specialists to spearhead the vital tasks of customer support, internal consultancy and new product introduction.

For you the question could be how to stay at the edge of communications development, expand your horizons into Europe or maximise your earnings. Amdahl can offer all three so, whatever you do next, check our requirements.

If you qualify, you could become part of a team recognised for providing the best support in the industry.

TP SPECIALIST

Have you reached the stage where you consider yourself a TP Specialist? Someone with the expertise to diagnose and resolve network problems? Can you provide technical assistance and guidance to colleagues - and management? Are you ready to take these skills into a new and challenging environment?

If so here is an opportunity not to be missed...

The European TP Specialist will be responsible for supporting customers utilising Amdahl's advanced 4005, a superbly designed communications processor which forms the foundation for a fully integrated network.

You should have sound hardware experience of 370, 3705 or equivalent, modems and 3270 products and be familiar with PTT's and 360 channel protocol. A good understanding of SNA, VTAM and NCP is essential, perhaps preceded by experience of MVS as a systems programmer or from practical debugging.

Mature and professional, you should have the ability to convey your ideas and concepts effectively, both to colleagues and customers.

These positions are based in West London, at the Amdahl European Support Centre. Regular travel to Europe and occasionally the Middle East and South Africa will be required.

To apply, contact our consultant, Francesca Drunkwater or write for an application form using the coupon below.

- COMMUNICATIONS - Message Switching
- Network Architecture
- HF and VHF
- ELECTRONIC WARFARE

Experience with the following hardware and software is of particular interest and would be a decided advantage:

- DEC VAX - PASCAL
- TANDEM - TAL, COBOL
- MOTOROLA 68000
- GEC 4000 - CORAL, BABBAGE

Successful applicants will work on a variety of company projects and may be involved in the development of exciting new products. There will be opportunities to travel and work abroad.

Senior Specialist Consultants: to £19,000

Extensive experience is required in:

- IBM EQUIPMENT IN THE AREA OF BANKING
- VERIFICATION AND VALIDATION TECHNOLOGY
- COMPUTER SECURITY
- IMAGE PROCESSING
- ELECTRONIC WARFARE

Some senior positions will include a company car.

The jobs offer modern office accommodation with easy access to London and the South Coast. An attractive range of benefits includes free BUPA, Permanent Health Insurance and an excellent Life Assurance linked Pension Plan. Generous help will be available with relocation.

If you feel you have the relevant requirements to join a top Systems Consultancy we would welcome a call on FREEPHONE 3179 or, if you prefer, drop a line to Pamela Hayes-Jones at our Fleet headquarters.

Ferranti Computer Systems Ltd.

Defending the oceans with Software at sea

HAMPSHIRE

Each minute of the day, each day of the year, there are Ferranti ship control systems maintaining a constant vigilance over the oceans of the world. This is all made possible by Ferranti's state-of-the-art real-time software. Our advanced naval systems are used around the globe to enable highly trained service personnel to operate at optimum efficiency in data gathering, interpretation, weapon

allocation and control. Due to a continual expansion programme at our Portsmouth offices, we are looking for innovative and self motivated programmers with experience in design and development of real-time naval software to enhance our existing reputation of software supremacy at sea.

Although we require staff at all levels, you should have:

- Degree in a numerate subject
- At least 2 years experience in development of advance real-time computer systems using CORAL/MASCOT technology
- Some experience of PDP/VAX or Ferranti FM 1600/ARGUS hardware would be an advantage

In return for your expertise, we offer a competitive rewards package expected of an internationally successful company, in addition to which you could expect:

- Generous relocation package (where applicable)
- Productivity bonus scheme
- Flexible working hours

- 5 weeks annual holiday
- Excellent career prospects
- Friendly, informal team environment
- Extensive on-the-job training facilities
- Subsidised staff restaurant

We are located in a pleasant part of Hampshire, close to both coast and countryside which provides the ideal environment for recreational and sporting facilities. So if you're a software specialist, make sure you speak to Ferranti first. Call Elaine Britton on Portsmouth (0705) 383101 Ext 3239, or write to her at: Personnel Department, Ferranti Computer Systems Ltd., Mountbatten House, Station Road, Cosham, Portsmouth, Hants PO6 1UD, quoting reference P/932/CW.

Software Manager

Computer Aided Engineering

£17-£19k + Car
Near Cambridge

A major supplier of Computer Aided Engineering systems whose broad base of expertise covers a uniquely wide range of engineering applications from solid modelling to sales order processing have a need for a Software Engineering Manager. As a member of the senior management team he or she will report directly to the Managing Director of this progressive company whose innovative approach to the integration of CAD/CAM, manufacturing and business systems has secured its position amongst the market leaders.

The successful candidate will be responsible for all of the company's application programmers, systems analysts and systems programmers. These currently operate as three teams covering Commercial Applications, Technical Applications and Systems Software. Major development of the company's own products, enhancement of third party software and bespoke projects are being undertaken in all three areas.

The appointed candidate will be a software professional with extensive experience of managing software development who is fully conversant with structured design and programming techniques and with common standards implementation. Applications experience will have been gained in CAD/CAM, manufacturing or commercial systems preferably in an engineering environment.

A significant amount of time will be spent in liaison with first line management regarding the cost effectiveness of new product development and bespoke projects as well as ensuring that a professional and efficient service is provided to the company's marketing department and its customers.

This is an excellent opportunity for a dynamic individual with extensive software and management experience to employ his skills in a highly visible senior management position.

KEY POSITION IN OUR DEVELOPMENT PROGRAM

GEC-Jerrold is a young fast growing high technology company with £multi-million contracts in Teleconferencing and Cable TV systems.

MANAGER COMPUTING SYSTEMS

We require a systems manager to provide a service to the company which will not only keep pace with our fast growing order book but will ensure that peak efficiency is maintained aided by the most appropriate computer equipment, computer aids and software for both commercial and engineering requirements.

Mastery of current hardware and software developments is essential, together with the capability of successfully tailoring these to meet company requirements and staff capabilities with appropriate consultation and training programmes as required.

Ideally candidates will be qualified with BSc (Hons) Computer Science or equivalent together with several years' experience in an engineering or scientific computing environment, age 28 - 35.

Top salary with attractive fringe benefits will be offered for the right person.

Please apply giving full details of age, qualifications, experience and salary to:-

Miss E.M. Scoble GEC-Jerrold Ltd 642-643 Ajax Avenue Slough SL1 4BG. Telephone: (0753) 521671

GEC JERROLD

STANDARDS AND TRAINING

c. £15,000

We have recently completed a Systems Planning exercise in support of the Group's ambitious business plan. Our strategy requires the implementation of new real-time transaction processing and office automation services throughout the Group by the end of 1986, based on a policy of distributed mini and micro processors.

These new systems will be developed using PROMPT project management and YOURDON - based structured analysis and design methods, to which management is fully committed. We require someone, probably currently at Senior Analyst or Project Leader level with experience in using similar methods, to oversee the implementation of these standards and to direct the training of departmental staff. It is expected that success in this position will lead to a more senior project management role.

Stewart Wrightson

International Insurance Brokers

This position, which includes attractive additional benefits, offers excellent career prospects within a young, progressive development environment. For further information contact Mike Kelly, Systems Development Manager, on 01-823 7511 or write to him, enclosing a current c.v., to Stewart Wrightson, 1 Camomile Street, London EC3A 7HJ.

JOBS IN YORKSHIRE AND THE NORTH-EAST

Positions left vacant during the recession are being repopulated as the area enjoys an upturn, reports Keith Holder

RECRUITMENT prospects in Yorkshire and the North-east, like the career of one of the area's celebrity cricketers, have taken a turn for the better.

This is not to imply that all is rosy for the job hunter, but most of the area's recruitment agencies and employers report an upturn over the last six months, thanks to a lessening of the effects of the recession.

This has led to demand created both by new posts, and the repopulation of positions left vacant in a bid by some employers to reduce costs.

The recovery is not uniform. Some sectors, mainly concerned with government or public installations, remain static, though there is apparently no worsening of prospects in this sector.

A spokesman for South Yorkshire County Council DP department, which has a staff of 60, says: "We operate a fixed establishment, and only recruit when someone leaves". The exception to this rule was the occasional appointment of a trainee under the government's job opportunities programme. There is only one such place planned for this year, and the appointments last only 12 months.

He adds that the recession has made people wary of leaving a job which offers security, resulting in a low staff turnover. This point was echoed by many similar establishments.

The Central Electricity Generating Board's policy is to take on only experienced programmers and analysts who have already worked in the power supply industry. There is a chance for graduates, says a spokesman, though recruitment for these takes place at the Board's London headquarters.

The reason for the Board's policy is a programme of centralisation, now in progress. In any event, staff movement is limited, for

Job hunters can score in the North

Like those of a famous Yorkshire cricketer, prospects are looking up.

much the same reasons as given by the County Council.

The main areas of growth are the engineering, manufacturing and commercial sectors.

A number of firms in these in-

dustries say that the sharp upturn in demand is a result of a real growth in requirements, not just replacement of staff.

Empire Stores, which has 550 staff, is recruiting at all levels at

present, but they can afford to be choosy, and demand a high degree of experience.

But even in these more affluent sectors there is a general lack of movement. This, says Tony Roberts, managing director of OCC Computer Personnel (Nantwich), may account for another Northern phenomenon: lack of moderately experienced people looking for new posts.

This is caused, Roberts believes, because staff tend to be promoted within the same organisation, and because with companies having to cut staff levels in the past, there has been no training ground for the next generation.

Roberts says this has created an as yet unfilled gap in the labour

of machines, or programmer/analyst/operator staff who could turn their hands to a number of jobs.

This demand has been enhanced, he adds, by the number of medium and small-sized companies setting up computer departments running mini- or microcomputer-based systems. Networks and distributed systems are also becoming an accepted method for small businesses, he says.

People with this type of experience are a scarce commodity, and anyone who can fit the bill would not find himself jobless for long.

The proportion of non-IBM installations is substantially higher in the North than in other areas. IBM has the lion's share of the larger installations, but in terms of

"Now that the business sector in the North is on the mend there is a real shortage of suitable candidates. In Yorkshire you have to attract people in, even though we offer a good training scheme"

pool, which could profitably be exploited.

The recession has also had its effect on the type of staff required. Tony Close, of BPS Computer Services, says organisations are now more interested in "generalists", with experience of a number

number of sites, ICL, Burroughs, Sperry and Digital Equipment have all made a substantial impact.

This is due to the higher proportion of scientific and engineering companies in the area.

Close says that of the specialised areas, computer aided design/man-

ufacture (CAD/CAM) is showing a slow but improving growth.

All is not lost for the traditional programmers, analysts and operators, says Derek Batchelor, contract sales manager for Computer People North.

There is a high demand for contract staff in all areas of expertise, particularly for those with experience in retail, distribution and financial installations.

Again, recovery from the recession is behind the trend, as companies experiencing a sudden upturn in business scramble to bring their staffs up to full strength, but are wary of saddling themselves with difficult-to-dispose-of permanent staff.

Even so, says Batchelor, there is a new trend for contract employees. Preference is now for staff with teleprocessing and real time experience. Demand is also up for staff to work in analytical applications.

Although mainframe experience is still in demand, there is a noticeable increase in vacancies for staff familiar with smaller models, such as IBM's System 34 and 36, says Close.

On the software side, RPG2 and 3, CICS, DLI and Cobol are the front-runners.

Michael O'Gorman, computer development manager for Bradford and Bingley Building Society, says his department is increasing by about 10 staff. But, now that the business sector in the North is on the mend, there is a shortage of suitable candidates.

"In Yorkshire, you have to attract people in, even though we offer a good training scheme," says O'Gorman.

Roberts sums up with the comment, that, though the area is probably showing an artificially high rate of growth due to depressed areas, the underlying trend is still upwards.

ALTOS + PICK in UNISON

Unison Technology PLC is a new subsidiary of leading UK PICK specialists Interactive Data Machines Ltd. and has been recently formed to market in the UK and throughout Europe, the powerful combination of the Altos range of Microcomputers with the PICK operating system. Outstanding opportunities exist to play a major and influential role in this important new company.

SALES EXECUTIVES c. £45K+

The successful applicants will already be enjoying considerable success in the multi-user business computer market, as a result of an energetic and highly professional approach. An excellent basic salary and commission plus an attractive over-quota bonus scheme will ensure high rewards for high calibre performance.

Positions are based in either the North or South of England.

Usual large company benefits include 2-Litre Car, Pension Schemes, Medical Insurance, etc.

TECHNICAL SUPPORT MANAGER c. £15K

Based in London, this position demands an excellent knowledge of PICK and experience in the pre and post sales environment.

The successful candidate will combine a business-like appearance with well developed communication skills and will welcome the challenge of supporting PICK in a fast growing, stimulating and already successful company.

Please send applications together with current cv to:

Walter Wilson Limited, a North-East based multiple grocery firm, wish to strengthen their data processing department. The Company operate a Burroughs' B22-30 and are looking for applicants who have a minimum of twelve months experience, preferably on the above computer. In addition, it would be beneficial if applicants also have spent some time on data-based systems.

If you are seeking a fresh stimulus and would like further information about this vacancy, contact Mr. L. Gordon, Personnel Manager, Walter Wilson Ltd., Jackfield Road, Rastway, T.V.S.E. Gateshead, Tyne & Wear, NE11 0TB. Telephone: 091 222 1111.

Programme Audit Software Keep your Career Options Open

To £11,500

London and Swindon

Primarily concerned with prestigious department stores, this public company has recently established a small DP Audit Team, to enhance the operational and financial effectiveness of its corporate audit function. You will have the unique opportunity to view all aspects of the company's nationwide business and advanced computer developments, using a range of ICL, Honeywell and IBM equipment.

Your responsibility as Programmer is essential for further DP Audit development and requires a mature personality and business awareness. You will be programming to produce audit software, using audit packages and Cobol programs. Although based in central London, you will regularly work independently at the group computer centre in Swindon.

Ideally you should have 18 months commercial programming using Cobol on ICL 2900 under VME/B, with a good working knowledge of MAC, and preferably experience of IDMSX database and general ICL utilities. You will be encouraged to advance your career by in-house and external training, and have an exciting range of promotion opportunities.

Attractive benefits include a 9-5 working day, staff discount, free lunches, travel and hotel expenses. Candidates will be considered from either London or Swindon locations.

To arrange an early interview, phone Susan Atkinson of Cripps, Sears & Associates Ltd., Personnel Consultants, 88-89 High Holborn, London WC1V 6LH. Tel: 01-404 5701 (daytime) or 01-638 1580 (evenings or weekends).

c. £11K

Aarque Systems Limited are a leading supplier of equipment and materials to drawing offices and print rooms with products ranging from the most sophisticated reprographic systems to drafting materials. They are both manufacturers and distributors in the U.K. with a head office at Colnbrook, two regional depots, 13 branch offices and 13 print shops, employing a total of 800 people.

Computer Aided Design and Drafting (CADD) has been available in the U.K. for many years but has traditionally been reliant upon large and expensive computers which has meant that the majority of drawing offices still rely on manual methods of drafting. With the recent dramatic growth in the sophistication of micro-computers, practical CADD systems are becoming available at a fraction of the previous cost bringing these systems within the affordable reach of even the smallest drawing office.

Aarque are forming a new division which will market a complete range of low cost micro-computer based CADD systems. Initially, Aarque CAD centres will be in London and Derby and plans are well advanced for other locations.

London & Derby

Their sales philosophy is to provide 'hands on' demonstration facilities for potential clients at local showrooms where there will be a number of different systems on display.

The Sales Support Engineer will give demonstrations and liaise closely with potential customers regarding their specific requirements. Experience of design/drawing office practices and a knowledge of micro-computers is therefore highly desirable.

Major company benefits will also complete the attractive package - including BUPA; Pension Scheme; Company Car, etc. For more details of these exciting opportunities please contact: Jim Wallis.

PUBLIC SECTOR APPOINTMENTS

MRC CLINICAL RESEARCH CENTRE
(NORTHWICK PARK HOSPITAL)
WATFORD ROAD, HARROW
MIDDLESEX HA1 3UJ

MEIOICAL RESEARCH COUNCIL

HEAD OF COMPUTING AND STATISTICS DIVISION

Applications are invited for this senior post at the Medical Research Council's Clinical Research Centre in association with Northwick Park Hospital.

The person appointed will be required to head the computing and statistics service provided to the staff of the Centre and to maintain a close association with the computing service of Northwick Park Hospital.

The appointee will have overall responsibility for the research direction of the division and will be expected to carry out a personal research programme. Candidates should be of high academic standing, should have a substantial background in computer science and the application of computer technology to biological and medical research.

The Clinical Research Centre may be visited by direct appointment and prospective candidates should discuss details of the post with the Director, Sir Christopher Booth.

Further particulars can be obtained from the Director's Office, Clinical Research Centre, Watford Road, Harrow HA1 3UJ. Telephone 01-864-5311, ext. 2220.

Closing date for applications: 17th March 1984

Information Engineer

£10,000

The Management Information Section is a highly motivated group providing key information to all levels of management throughout the Surveyor's Department. A wide variety of techniques are available, including Critical Path, Staff Diaries and Resource Management, using VAX and IBM machines through remote terminals.

Your role will be

1. To co-ordinate the flow of information needed for effective decision making.
2. To advise on the organisation of technical systems (for which engineering expertise is an advantage).
3. To assist in setting up new information systems (for which computing expertise is an advantage).

For this senior position you should be a Chartered Engineer with computing experience or a qualified Computer Specialist with suitable experience in highways department. A relocation expenses package is payable in approved cases.

For more information and application form telephone Chichester (0243) 777973 quoting reference SQ 101 or write to County Surveyor, County Hall, Chichester, PO19 1RH. Closing date 19th March, 1984.

TEST VALLEY BOROUGH COUNCIL PROGRAMMER/ ASSISTANT OPERATOR

£7,181 to £7,589 per annum
(Starting point negotiable)

The Council has recently taken delivery of an ICL ME 28/37 processor with a network of D.R.S. terminals covering a number of remote sites.

This new post has been created in the Finance department, based at Andover, to assist in the development of new applications in addition to aiding in the maintenance of an operational network.

The successful applicant will have sound operational experience of an ME 28 and a minimum of 12 months' experience of COBOL. An attractive package is offered, including an essential user car allowance, together with relocation assistance and membership of a Group Life Assurance Scheme.

Informal telephone enquiries regarding the post would be welcomed by Mike Medhurst, Assistant Borough Treasurer (Ext. 238) or Colin Beale, Data Systems Officer (Ext. 227) on Andover (0264) 84144.

For application form and job description please contact the Personnel Officer, Council Offices, Dutton Road, Romsey, Hants (Telephone: Romsey 616117, Ext. 582). Closing date for return of application forms Friday, 9th March 1984.

NETWORK CONTROLLERS

LONDON SW17
£6,712-£11,873

South West Thames Regional Health Authority has a requirement for experienced Network Controllers to join a rapidly expanding group dealing with the installation, maintenance and administration of a fast growing communications network. Candidates should have a minimum of six months' experience working within a network control environment and be conversant with equipment, principles and conventions relating to such an environment. He/she will also have experience of liaising with British Telecom and suppliers and users of telecommunications and terminal equipment. The positions will initially be days only but extended hours working may be required in the future.

Appointments will be made at a grade and salary level appropriate to the applicant's experience and qualifications.

For further details contact:

Kaith Fox
Communications Network Manager

Regional Computer Centre
Springfield Hospital
Glenburnie Road
Tooting, London SW17 7DZ. Tel: 01-872 9888

GLC

Working for London

Computer Auditor

Computers play an increasingly important role in many areas of the GLC's operations. The main computer installation currently centres around an IBM 3081 and 3033 running under MVS, with extensive teleprocessing facilities to over 500 terminals. There is also considerable and expanding use of small computers and local area networks.

To meet this challenge the Audit Branch is building up a small specialist Computer Audit team consisting of both accountants and data-processing professionals.

One vacancy remains for a qualified accountant with a sound grasp of information systems and technology to plan and carry out audits of accounting and other systems and the related development activities and to contribute to the development of audit techniques in line with continuous systems update.

An awareness of the financial and management processes of a large public body, a thorough understanding of audits and principles are essential together with the ability to communicate effectively at all levels. This post is suitable for job sharing.

Salary: £12,336-£13,872 inclusive.

For an application form, to be returned by 9th March 1984, write to: Finance Department, Greater London Council, Room 226, The County Hall, SE1 7PB or telephone 01-633 3659.

The GLC welcomes applications from all sections of the community, irrespective of their sex, ethnic origin, colour, sexual orientation or disability, if they have the necessary attributes to do the job.

The GLC is an equal opportunities employer

University of Southampton
DEPARTMENT OF COMPUTER STUDIES

SYSTEMS PROGRAMMER (Temporary)

Applications are invited for the post of Systems Programmer in the Department of Computer Studies. The person appointed will maintain and develop systems software for the department's three UNIVAC systems: VAX 11/78, VAX S-8000 and PE 3205L, and develop software to assist the Department's teaching and research programmes. Fluency in programming in a high-level language such as Pascal or C is essential; experience of UNIX is desirable.

The post is available until 30 September, 1985. Salary on Scale 1A, between £7,190 and £8,930, dependent on age and experience.

Applications (4 copies) should be sent to Mrs. E. C. P. Sears, Staffing Department, University of Southampton, Highfield, Southampton SO9 5NH, not later than 15 March, 1984. Please quote reference 1808/PCW.

COMPUTING ASSISTANT
(PROGRAMMER)

An experienced COBOL Programmer is required to join a small team of analysts and programmers working in the Administrative Computing Unit. The Unit currently maintains an interesting range of batch and on-line systems on an ICL 2900/40 and an ICL ME28/37, and new on-line work is being actively developed.

For this post experience in an environment including microcomputer or large on-line mainframes would be equally valuable.

The starting salary is at an appropriate point on the B Grade of the scale for Administrative staff (GS30-2875) according to age, qualifications and experience.

Applications forms and further particulars may be obtained from the Registrar, the University of Leeds LS2 9JT, quoting reference no. 1102842. Closing date for applications is 15 March, 1984.

(8014)

LEICESTER POLYTECHNIC
SCHOOL OF MATHEMATICS
COMPUTING AND STATISTICS

TECHNICIAN (INFORMATION TECHNOLOGY)

SALARY SCALE
£5640 to £8135 per annum

Required to provide technical assistance in the laboratories, other non-teaching staff, and to be responsible for maintaining hardware and software, and demonstrating software. It is expected that the successful applicant will have an appropriate HNC or HND.

Application forms and further particulars are available from the Personnel Office, Leicester Polytechnic, PO Box 10, Leicester LE1 6BH. Tel: Leicester 3651591, Ext. 2303.

(8001)

KINGSTON POLYTECHNIC

School of Electronic Engineering and Computer Science

RESEARCH COMPUTING OFFICER

A post is available in a small research group in the School working on the computer-aided design of engineering systems. The project is funded by the Science and Engineering Research Council and is being carried out jointly by the School of Electronic Engineering and the University of California, San Diego, with Imperial College, London, and the University of Cambridge. An experienced person appointed will take part in the design and development of an advanced interactive design support environment using graphical features of the ICL PERQ personal computer acting as a workstation to a VAX 11/780, both running UNIX. An interest in computer-aided design, man-machine interfaces, especially graphical interaction, and their application to engineering system design, is essential and experience in one or more of these areas would be an advantage.

Initial salary will be in the range of £3,657 pa, including London allowance. An interim salary of £4,000 pa will be paid for the first three months. Registration for a higher degree would be encouraged where appropriate. Details and application forms from Academic Registry, Dept. AD, Kingston Polytechnic, Penrhyn Road, Kingston upon Thames KT1 2EE. Tel: 01-546 1549 ext 215.

(7989)

ILFORD

Ilford — part of the CIBA GEIGY GROUP — is one of the most respected names in photography. We have just completed a 30 million pound investment to concentrate all our UK manufacturing on to one 50 acre site at Maberley — a rural Cheshire village with easy access of Manchester. Having made the Maberley site one of the most modern in the photographic industry we can now streamline our existing computer systems, currently based on Honeywell DPS/100 mainframe and level 6 mini computers. A number of challenging on-line and database projects are about to commence which will utilise Honeywell DMIV/TP software. Reorganisation of the computer department to cater for this major expansion has created the following opportunities for computer professionals.

ANALYST/PROGRAMMER £8,500-£10,700

You should have a good COBOL programming background, ideally gained in a mainframe environment and be experienced in the design of commercial systems using database software.

A PROFESSIONAL APPROACH

COBOL PROGRAMMERS £7,200-£9,000

A good COBOL background is required, ideally gained in a mainframe environment. Knowledge of database techniques is a definite advantage but applicants with good on-line skills will have the opportunity of gaining database experience.

Full details of these excellent career opportunities are available by telephoning Graham Pepper 061 491 1666 (day time) or Adlington (0257 480291) (eves/wknds). Alternatively write to him at Computer People North, FREEPOST, Sovereign House, Stockport Rd, Cheshire, SK8 2YD.

The Market Leaders

A SMALL STEP ...OR A GIANT LEAP?

Fourth generation software is only one step. Our Client is a household name. Operating internationally in the production and distribution of consumer products calls for the latest techniques. Their plan to introduce major new developments is being implemented now. They will be using fourth generation tools, using the latest data analysis techniques for new bespoke applications in marketing and distribution. Their need for additional skills gives you an opportunity to be really involved. Your career could take a giant leap into the future.

This is a senior appointment involving teleprocessing, database systems and data analysis. Applicants must have had at least five years experience in these areas. Detailed experience of system design using IDMS is essential, preferably in an IBM environment, but good candidates from a VME environment will be acceptable. Knowledge of CICS and ADS/O would be an advantage, as would exposure to the techniques of data analysis.

This too is a senior appointment and calls for at least five years successful experience in a TP and database environment.

A sound knowledge and good experience of the techniques of data analysis is essential and previous experience of sales/marketing applications would be an advantage. Although experience of an IBM/IDMS environment would be particularly relevant, the major requirement is for the ability to communicate well at all levels including very senior management.

Candidates for either positions should have a good educational standard ideally to degree level or equivalent. Equally they should be able to demonstrate commitment, enthusiasm and a strength of character to see a job through to a successful conclusion. In addition to the salaries, the successful candidates will enjoy a wide range of large Company benefits, including profit sharing and a non contributory pension scheme. Assistance with relocation will be provided where necessary, to this location just west of London.

In the first instance applicants should contact John Pitt on 01 935 0671 during office hours (24 hour answering service) or should write enclosing a full C.V. to the London address below.

Real-Time Software Engineers

London and Surrey Borders Up to £15k+
Consistently expanding software house requires more staff with 18 months' real time systems experience. Knowledge of CORAL or FORTRAN on GEC 4000 or DEC equipment used for defence or industrial applications is needed. Bonus points for MASCOIT skills. Excellent career prospects. Ref 2302/A

Database Analysts**Up to £15k**

London
Substantial experience of database systems (IMS/IDMS/INGRES) is needed with skills in data analysis and logical database design. Database dictionaries, database administration and physical database design are other areas of interest to our client. Either commercial or defence systems (preferably with graphics) would be worthwhile applications backgrounds. Overseas travel possibilities. Ref 2302/B

Analyst/Programmer**£7½k-£11k**

London
A minimum of 12 months' on-line programming experience is required to join a team involved in the development and support of real-time software products for the UK and European insurance markets. Personal attributes are of prime importance and the opportunity exists to move into a specialist technical role. Ref 2302/C

HP 3000 Analyst/Programmers**£8k-£12½k**

London
We have two clients currently seeking staff with good business and commercial experience gained in an HP 3000 environment. In both cases new development work is being undertaken and opportunities exist for people with all levels of experience. A minimum of 12 months' (past training) COBOL experience is essential and knowledge of QUICK, QUIZ and QUERY useful. Ref 2302/D

Banking**£12k to £18k package**

London and travel
Two years (minimum) to five years (better) as an analyst/programmer in big mainframe environment is the experience our client seeks. Tandon + TAL/COBOL or IBM + RPG is ideal, but other Banking systems experience will also be considered for the more senior positions. Candidates must have project leading potential. Ref 2302/E

Isobel Bruce, David Fletcher or Gilbert van Someren 01-405 1008 or write quoting Ref. number, 16 Red Lion Square, London WC1R 4QS

Product Manager**£12k-£14k base****London**

MicroNut or Marketing Man? Maybe a mixture of both. My client's new product follows a line of small WP devices and is targeted at the home and educational microcomputer market. They are looking for a competent, capable and effective communicator with micro programming and product or project management experience. Ref 2302/F

IBM Analyst/Programmer**£8k-£16k****London**

Our major consultancy client has vacancies at levels from programmer to senior analyst for staff with good CICS/IMS skills. Knowledge of structured programming helpful. A software house background would be preferred but other high calibre candidates should also apply. Ref 2302/G

Sales**London & South East**

Dealer Sales, P.C.s £10k-10k++
Major Accounts, Peripherals £12k-12k++
Sales Manager, Carmins, products £20k pkg

Sales & Marketing Recruiters Ltd
Leaders in High Technology Recruitment

SALES EXECUTIVES COMPUTER AIDED ENGINEERING HARDWARE & SOFTWARE SYSTEMS

It's nice to have the opportunity of satisfying the recruitment needs of a fast growing international organisation whose name is a by-word for innovation and product integrity, a reputation that is synonymous with all that is excellent in technological progress, a name that implies instant credibility. Such is our client, a company with manufacturing capabilities that extend from computer systems to micro-chips and more particularly, very special skills in the provision of integrated CAD/CAM systems (CAE if you prefer it!). The last 3 months have been the most successful in the company's history and continuing growth has now created the need for additional salespeople to sell Computer Aided Engineering Systems to mechanical engineering and manufacturing organisations throughout

MIDLANDS & NORTH SOUTHERN ENGLAND

Candidates are likely to be currently employed in selling CAD/CAM systems for a recognised major supplier or involved in the provision of engineering related computer services, preferably with an engineering qualification. Sales targets are relatively low for this sector of the market place and anticipated on target earnings will be

£32,000 + COMPANY CAR

Please contact Alasdair Scott (London), or Roger Dodd (Lichfield), quoting reference SSA/024.

This job is available to both men and women.

Software Systems Design Engineers**c.£10-15,000**

Hardware Past... ...Software Future

But, for the present, bridging that gap depends on how you plan your next career move - and that's where we come in. A highly successful Company in the area of advanced digital communication systems, we are looking for additional software engineers/team leaders to provide direct input at every stage of the design and development process, on a wide range of projects.

Your involvement will stretch from initial conception to final product release, which means an ability to grasp microprocessor-based hardware concepts is as important as your software skills. Speaking of which, you'll have real-time and systems software design experience - Assembler and high level languages applied to communication systems preferably. Of course the more senior positions call

for greater in-depth experience and man-management ability.

Naturally, the rewards are outstanding, the environment forward thinking and the prospects for career progression exceptional.

SALES BIT

Quality of Management - 84

Never hide the truth about the opposition

PRODUCT knowledge has been emphasised in this column over the last few weeks, but that is only one of four key areas of skill in which the accomplished salesman needs to be proficient. This week I would like to talk about the importance of knowing your competitors and their products as well as your customers and their needs.

A salesman obviously cannot be expected to sell his product effectively until he knows how good it is. What is perhaps not so obvious is that what he needs to know, more particularly, is how good it is in relation to other alternatives. Yet how can he have this knowledge if he doesn't have detailed information on what his competitors are able to offer?

If he is to stand any chance of sales success he needs to know the advantages and feature benefits of his company's products relative to others that are also available in his own marketplace.

For some reason, best known to psychiatrists, some sales managers behave as if they believed the very opposite to this rather obvious statement. They do so by misleading their salespeople, and sometimes themselves, as to competitive products.

They turn a blind eye to the key benefits of other products and try to brainwash their salespeople into believing their product is superior and untouchable and that the competition consists of an array of idiots peddling worthless merchandise.

This kind of blind chauvinism is pointless and idiotic for it can only lead to the kind of disaster that is inevitable when salespeople are asked to work in the dark.

If you hide the truth about the competition from your salespeople they are bound to discover it eventually, and probably in the worst possible circumstances - like in front of a major prospect.

Everything will be going fine when he is suddenly asked about a special facility being promoted by the competition. Within seconds he is fumbling, his confidence declining, control of the negotiation slipping away, all because he doesn't know what the buyer is talking about. What the hell is a double entry?

It is easy to make the mistake of thinking that knowledge of competitive products will undermine the salesman's confidence in his own company's offerings. Quite the contrary. The salesman can operate much more effectively if he knows what he's up against.

We all have a basic fear of the unknown. Horror movies use surprise and suspense to get the adrenalin flowing, and the eventual appearance of the actual monster usually comes as light relief. If the salesman knows what he's up against he can be prepared with compensating alternatives and sensible arguments about the relative cost/benefit of the features involved.

Maybe they are not even relevant to the client's need. Maybe his product provides the same facility in a different way. If he is handicapped with ignorance he will spend all his time worrying about the opposition. How good is their product? Is it better than ours? Can we compete? Does the prospect know something I don't?

This is a sterile situation that can only lead to under-equipped salespeople and ultimate sales failure.

For me, the most challenging and satisfying occupation for the salesman is creative selling. This is a process where either the problem to be solved is identified by the salesman rather than the buyer, or where the application of the solu-

tion - the product - is made in an imaginative and unusual manner; or even both. This effectively means that the buyer ends up purchasing something that, prior to the salesman's visit, he had no intention of buying. No high pressure, strong-arm tactics or sales trickery, but rather logical evaluation of the buyer's situation and needs relative to the kind of solutions he has available.

It is this kind of selling ability that enables some people to find business where others have difficulty in surviving. It is this level of skill that keeps some salespeople consistently at the top of the league-table. It is this depth of knowledge that brings sales success to some people who may have little personality, unexceptional administrative capability and indifferent selling skills.

What it all boils down to is developing a total understanding about the customer and his business: the products, the marketplace, the manufacturing process, the business problems and opportunities, the people and their interests, the politics and so on.

One of the biggest factors in sales success is the achievement of professional credibility in the eyes of the potential buyer. Are you the kind of person he wants to deal with and can you really be trusted to solve his problems?

The assurance the buyer really needs usually comes from a belief that the salesman not only 'knows' about the product he is selling, but also its applicability in the buyer's context relative to the prevailing situation and the idiosyncrasies of their particular business.

Learning is one thing, remembering is something else. There is no point in knowing all about the customer operation, then rapidly forgetting all about it. That's where comprehensive client records come into their own.

In my career as a sales manager I have received a heap of flak about a wide range of sales disciplines and responsibilities, but I suspect some 90% of it has been about the maintenance of effective client records. I have never understood why so many salespeople (and many of their managers!) when confronted by the inescapable logic of maintaining meaningful and continuing client records, proceed to mess about with a few grotty cards or manila envelopes, or more typically, ignore the process altogether.

I have frequent conversations with people on this topic who agree wholeheartedly with the benefits of maintaining comprehensive client records. They will willingly accept the advantages in terms of customer perception, continuity in times of holidays, sickness or territory change and the obvious contribution to sales success. But when asked to produce evidence of their commitment they can offer no more than willingness to participate in a brain-scan.

Effective client records are more than names, addresses and telephone numbers. They need to contain information that produces a picture of the client.
